DIRECT TESTIMONY

OF

JOHN P. WEISENSEE

Case No. ER-2010-____

1	Q:	Please state your name and business address.
'	Q.	r lease state your name and business address.
2	A:	My name is John P. Weisensee. My business address is 1200 Main Street, Kansas City,
3		Missouri 64105.
4	Q:	By whom and in what capacity are you employed?
5	A:	I am employed by Kansas City Power & Light Company ("KCP&L" or the "Company")
6		as Regulatory Affairs Manager.
7	Q:	What are your responsibilities?
8	A:	I have primary responsibility for preparing the financial information contained in various
9		regulatory filings in Missouri and Kansas.
10	Q:	Please describe your education, experience and employment history.
11	A:	I graduated from The University of Texas at Austin in 1977 with a Masters in
12	•	Professional Accounting. I had previously received my Bachelors of Business
13		Administration degree in Accounting from the same university, summa cum laude.
14		have been a Certified Public Accountant since 1977. I began my career with KCP&L in
15		January 2007. From 1986 to 2001, I was the Manager, Finance and Accounting for
16		St. Joseph Light & Power Company. In the years between leaving that utility and
17		beginning at KCP&L, I was self-employed as a business consultant in the utility industry
18		and for many other industries.

1	Q:	Have you previously testified in a proceeding before the Missouri Public Service
2		Commission ("MPSC" or "Commission") or before any other utility regulatory
3		agency?
4	A:	Yes, I have testified before the MPSC on several occasions while at St. Joseph Light and
5		Power and at KCP&L. In addition, I have testified before the Kansas Corporation
6		Commission.
7	Q:	What is the purpose of your testimony?
8	A:	The purpose of this testimony is to: (i) describe the revenue requirement model and
9		schedules that are used to support the rate increase KCP&L is requesting in this
10		proceeding (Schedule JPW2010-1 attached to this testimony); and (ii) support various
11		accounting adjustments listed on the summary of adjustments (Schedule JPW2010-2
12		attached to this testimony).
13		REVENUE REQUIREMENT MODEL AND SCHEDULES
14	Q:	What is the purpose of Schedule JPW2010-1?
15	A:	This attachment includes the schedules derived from the Company's revenue requirement
16		model used to support the rate increase that KCP&L requests in this proceeding.
17	Q:	Were the schedules prepared either by you or under your direction?
18	A:	Yes, they were.
19	Q:	Please describe the process the Company used to determine the requested rate
20		increase.
21	A:	We utilized a standard ratemaking process to determine the rate increase request. We
22		used historical test year data from the financial books and records of the Company as the
23		basis for operating revenues, operating expenses and rate base. We then adjusted the

historical test year data to reflect: (i) normal levels of revenues and expenses that would have occurred during the test year; (ii) annualizations of certain revenues and expenses; (iii) amortizations of regulatory assets and liabilities; and (iv) known and measurable changes that have been identified since the end of the historical test year. We then allocated the adjusted test year data to arrive at operating revenues, operating expenses, and rate base applicable to the Missouri jurisdiction. We subtracted operating expenses from operating revenues to arrive at operating income. We then divided operating income by rate base to calculate the rate of return prior to the requested rate increase. The requested rate increase is the amount necessary for the post-increase calculated rate of return to equal the rate of return supported by KCP&L witness Dr. Samuel C. Hadaway.

TEST YEAR

- 13 Q: What historical test year did KCP&L use in determining rate base and operating14 income?
- 15 A: The revenue requirement schedules are based on a historical test year of the twelve 16 months ending December 31, 2009 with known and measurable changes projected 17 through December 31, 2010. We will update the schedules as of June 30, 2010 and then 18 true up to actuals as part of the true-up process.
- 19 Q: Why was this test year selected?

1

2

3

4

5

6

7

8

9

10

11

12

A: The Company used the twelve-month period ending December 31, 2009 for the test year in this rate proceeding as that period reflects the most currently available quarterly financial information at the time the revenue requirement was prepared.

1	Q:	Does test year expense reflect an appropriate allocation of KCP&L overhead to
2		KCP&L Greater Missouri Operations Company ("GMO") and other affiliated
3		companies?
4	A:	Yes, KCP&L incurs costs for the benefit of GMO and other affiliates and these costs are
5		billed out as part of the normal accounting process. All costs, labor and non-labor, are
6		charged to projects at KCP&L and certain projects are set up to allocate costs among the
7		various companies based on appropriate cost drivers or to assign costs directly to the
8		benefiting affiliate.
9	Q:	Are certain costs incurred by GMO and allocated to KCP&L?
10	A:	Yes, although not as significant as costs allocated to GMO, certain costs are incurred by
11		GMO and allocated to KCP&L.
12		JURISDICTIONAL ALLOCATIONS
13	Q:	Why is it necessary to allocate revenues, expenses and rate base to the Company's
14		various jurisdictions?
15	A:	KCP&L does not have separate operating systems for its Missouri, Kansas, and firm
16		wholesale jurisdictions. It operates a single production and transmission system that is
17		used to provide service to retail customers in Missouri and Kansas, as well as the full-
18		requirements firm wholesale customers. Therefore, jurisdictional allocations of operating
19		expenses, certain operating revenues and rate base are necessary.
20	Q:	Why is the method by which the allocations are made critical?
21	A:	The method of allocation is critical first to ensure that the rates charged to each
22		jurisdiction of customers reflect the full cost of serving these customers but not the cost
23		of serving customers in other jurisdictions. Secondly, the method of allocation must

allow the Company the opportunity to recover fully its prudent costs of serving these customers. That is, if the sum of the allocation factors allowed in each jurisdiction is less than 100%, then the Company is unable to recover its prudent cost of service and return on rate base. Company witness Larry W. Loos discusses this issue in more detail in his direct testimony.

Q: What allocators did the Company use?

1

2

3

4

5

6

7 A: The allocators that were utilized can be classified as input allocators and calculated 8 allocators. The input allocators are based on weather-normalized demand and energy, 9 described in the direct testimony of KCP&L witness George M. McCollister, and 10 customer information. Attached as Schedule JPW2010-3 is the calculation of these 11 allocators for this rate proceeding. The calculated allocators are, at their root, based on 12 the Demand, Energy, and Customer allocators. The calculated allocators are, however, 13 calculated within the revenue requirement model. They are often calculated as 14 combinations of amounts that have previously been allocated using one or more of the 15 input allocators.

16 Q: Please describe the Demand allocator.

17 A: The Demand allocator is a 4-month weather normalized average of the coincident peak
18 demands for the Missouri and Kansas retail jurisdictional customers and the firm
19 wholesale jurisdiction.

20 Q: Please describe the Energy allocator.

21 A: The Energy allocator is based on the total weather-normalized kilowatt-hour usage by the
22 Missouri and Kansas retail customers and the firm wholesale jurisdiction.

- 1 Q: Please describe the Customer allocator.
- 2 A: The Customer allocator is based on the average number of customers during the test year
- 3 in Missouri, Kansas, and the firm wholesale jurisdiction.
- 4 Q: Please explain how the various revenues, expenses and rate base components are
- 5 allocated among KCP&L's regulatory jurisdictions.
- 6 A: Attached as Schedule JPW2010-4 is a narrative describing the allocation methodology.
- 7 Mr. Loos discusses several of these allocators in more detail in his testimony.

8 <u>ADJUSTMENTS</u>

- 9 Q: Please discuss Schedule JPW2010-2.
- 10 A: This schedule presents a listing of revenue and expense adjustments to the 12 months
- ended December 31, 2009 test year, and rate base adjustments to the December 31, 2009
- balances. The adjustments are organized and subtotaled by the lines reflected on
- 13 Schedule 1, SUMMARY OF OPERATING INCOME & RATE BASE, of
- Schedule JPW2010-1. This listing includes the adjustment number and description,
- amount, jurisdictional application and the Company witness sponsoring the adjustment.
- Various KCP&L witnesses will support, in their direct testimony, the need for each of
- these adjustments.
- 18 Q: Please explain the adjustments to reflect normal levels of revenues and expenses.
- 19 A: These adjustments are made to reflect retail revenue and bad debt levels that would have
- 20 occurred if the weather had been "normal" during the test year. Also included are
- 21 adjustments to reflect a "normal" level of maintenance expense. This is necessary
- because, for example, turbine maintenance does not occur every year. Thus, an
- individual generating unit may have large variations in maintenance from year to year.

1 ():	Please ex	plain the a	idjustments to	annualize	certain	revenues	and ex	menses.
, ,	2.	I ICHSC CA	Խոտոր արև գ	iujustinciits u	, 41111441126	CCI LUIII	ICICHUCS	anu c	rbemaca.

A: Revenues are annualized to reflect anticipated customer growth during the true up period.

Annualization adjustments have been made to reflect an annual level of expense in cost

of service, such as the annualization of payroll and depreciation expenses. The former

reflects a full year's impact of recent pay increases, while the latter reflects the impact of

a full-year's depreciation on recent plant additions as well as adoption of new

depreciation rates proposed by KCP&L in this case as discussed by Company Witness

John J. Spanos.

9 Q: Please explain the adjustments to amortize regulatory assets and liabilities.

- 10 A: Various regulatory assets and liabilities have been established in past Missouri rate cases.

 These assets/liabilities are then amortized over the number of years authorized in the

 Orders for the applicable rate cases. Adjustments are sometimes necessary to annualize

 the amortization amount included in the test year.
- 14 Q: Please explain the adjustments to reflect known and measurable changes that have 15 been identified since the end of the historical test year.
- 16 A: These adjustments are made to reflect changes in the level of revenues, expenses, rate
 17 base and cost of capital that either have occurred or are expected to occur prior to the
 18 true-up date in this case, December 31, 2010. For example, payroll expense and fuel
 19 costs have been adjusted for known and measurable increases.

1	Q:	Do all of these adjustments, listed on Schedule JPW2010-2 and discussed
2		throughout the remainder of this testimony, entail an adjustment of test year
3		amounts?
4	A:	Yes, the adjustments described below and summarized on Schedule JPW2010-2 reflect
5		adjustments to the test year ended December 31, 2009, or, in the case of rate base items,
6		adjustments to December 31, 2009 balances.
7		RB-20 AND RB-3 PLANT IN SERVICE
8	Q:	Please explain adjustment RB-20.
9	A:	We rolled December 31, 2009 plant balances forward to December 31, 2010, by using the
10		Company's 2010 capital budget, which includes both capital additions and retirements.
11		Additional retirements of general plant were also reflected consistent with the results of
12		the depreciation study discussed by Company witness John J. Spanos.
13	Q:	What is the projected Iatan 2 balance that is included in rate base in this rate
14		proceeding?
15	A:	We have projected a balance of \$1.04 billion (KCP&L's share, total company, including
16		Allowance for Funds Used during Construction ("AFUDC") but excluding currently
17		identified costs classified as common between Unit 1 and Unit 2). Company witness
18		Brent C. Davis discusses the Iatan 2 in-service in his testimony.
19	Q:	For purposes of the Company's filing, were the projected latan 2 project costs
20		allocated to KCP&L based on its ownership interest in that plant?
21	A:	Yes, the entire project cost was allocated at KCP&L's ownership level (54.71%) even
22		though it is possible that certain of these costs may subsequently be identified and
23		classified as additional common between Unit 1 and Unit 2.

1	Q:	Why did the Company take that approach?
2	A:	The primary reason was because certain end-of-project work included in the Iatan Unit 2
3		budget has not yet been fully designed. Therefore, the expected cost of that common
4		work is not known with certainty at this time. A contributing factor is conservatism; that
5		is, KCP&L's share of Iatan 2 (54.71%) is lower than its share of Iatan common (61.45%).
6	Q:	Since the Company's ownership interest in Iatan 2 is less than that of Iatan 1, was
7		an adjustment made to reflect KCP&L's reduced ownership in the common plant
8		existing prior to the recent latan construction activity?
9	A:	Yes, adjustments RB-20 and RB-30 include reductions in rate base components to reflect
10		a net billing to certain Iatan 2 partners of common plant existing prior to the recent Iatan
11		construction activity. While this billing has not yet taken place, both Plant in Service and
12		Reserve for Depreciation were adjusted using a calculation based on the individual
13		components of common plant, original Plant in Service and the related Reserve for
14		Depreciation projected as of December 31, 2010.
15	Q:	Please explain adjustment RB-3.
16	A:	This adjustment is necessary to adjust disallowed Wolf Creek plant to a Missouri
17		jurisdictional basis.
18	-	RB-25/CS-111 IATAN 1 REGULATORY ASSET
19	Q:	Please explain adjustment RB-25.
20	A:	Pursuant to the terms of the Non-Unanimous Stipulation and Agreement that was
21		approved by the Commission in Case No. ER-2009-0089 ("2009 Case") on June 10, 2009
22		("2009 S&A"), KCP&L was authorized to include in a regulatory asset depreciation
23		expense and carrying costs for the Iatan Unit 1 Air Quality Control System ("AQCS")

1		and Iatan common plant not included in rate base in that case. Adjustment RB-25 rolls
2		forward the regulatory asset balance, which is recorded on a Missouri jurisdictional basis,
3		from January 1, 2010 to December 31, 2010 based on projected jurisdictional
4		depreciation expense and carrying costs during that period.
5	Q:	What do you mean by the term "Iatan common?"
6	A:	A component of the construction of the Iatan 1 Unit AQCS and Iatan Unit 2 is equipment
7		and facilities to be used by and for the benefit of both Iatan Unit 1 and Iatan Unit 2.
8		Examples include a shared chimney, water treatment facilities, and rail facilities.
9	Q:	What is the projected regulatory asset balance that is included in rate base in this
10		rate proceeding?
11	A:	We have projected a December 31, 2010 Missouri jurisdictional balance of \$13.3 million.
12	Q:	Is this regulatory asset property includable in rate base?
13	A:	Yes, the 2009 S&A provided for rate base treatment.
14	Q:	Please explain adjustment CS-111.
15	A:	We annualized the amortization of this regulatory asset based on the remaining
16		depreciable life of the Iatan Unit 1 AQCS, pursuant to Federal Energy Regulatory
17		Commission ("FERC") account 312, or 26 years, as reflected in the depreciation study
18		supported in the direct testimony of Company witness John J. Spanos.
19	Q:	Will this amortization continue for 26 years?
20	A:	Yes, pursuant to the 2009 S&A. However, the Company recommends transferring this
21		regulatory asset to plant accounts effective with new rates in this rate proceeding. The

carrying cost portion of the regulatory asset would be transferred to Plant in Service

- 1 while the depreciation portion of the regulatory asset would be transferred to the Reserve
- 2 for Depreciation.
- 3 Q: Why is this transfer recommended?
- 4 A: Administratively, tracking these deferred costs will be much easier if the costs are
- 5 included in the Company's property record system, as part of the overall Iatan Unit 1
- 6 plant costs, rather than tracking the regulatory asset for 26 years.
- 7 Q: Why does this request make sense from a regulatory standpoint?
- 8 A: The purpose of the regulatory asset was to bridge Iatan Unit 1 AQCS and common plant
- 9 between the 2009 Case and the current rate case. That is, under terms of the 2009 S&A
- only Iatan 1 AQCS and common plant costs paid or approved for payment as of May 31,
- 11 2009 were allowed in rate base in the 2009 Case. The intention was not to disallow costs
- not paid or approved for payment at that date, but rather to allow these costs in rate base
- in the next rate proceeding (the current rate case). Therefore, it seems logical that at the
- end of this rate proceeding all latan Unit 1 AQCS and common plant costs should be
- included in plant accounts going forward.
- 16 Q: Would this transfer have any ratemaking impact?
- 17 A: No. The unrecovered deferred costs would be included in rate base in future years
- whether the costs are identified as a regulatory asset or included in plant accounts.
- 19 Correspondingly, depreciation expense will be recognized at the appropriate level.
- 20 Q: What specific request is the Company making of the Commission on this subject?
- 21 A: We request that the deferred depreciation portion of the Iatan 1 Unit AQCS and Iatan
- common cost regulatory asset be transferred to FERC account 108, Reserve for
- Depreciation, as a reduction in that balance and that the carrying cost portion of the

7		regulatory asset be transferred to FERC account 101, Plant in Service, as an increase in
2		that balance. Alternatively, in the event the Commission does not grant this request, we
3		ask that the amortization period for the regulatory asset be set at the remaining
4		depreciable life of Iatan Unit 1, or 26 years.
5	Q:	Exclusive of the regulatory asset, what is the amount of Iatan Unit 1 AQCS Plant-in-
6		Service included in this rate proceeding, including common plant?
7	A:	We have included a balance of \$509.7 million (KCP&L's share, total company, including
8		AFUDC).
9		RB-13 AND RB-30 RESERVE FOR DEPRECIATION
10	Q :	Please explain adjustment RB-13.
11	A:	This adjustment is necessary to adjust the financial Reserve for Depreciation to a
12		Missouri basis.
13	Q:	Please explain adjustment RB-30.
14	A:	This adjustment rolls forward the Missouri-basis Reserve for Depreciation from
15		December 31, 2009 to balances projected as of December 31, 2010.
16	Q:	How was this roll-forward accomplished?
17	A:	The depreciation/amortization provision component was calculated in two steps: (i) by
18		multiplying the December 2009 provision times twelve to approximate the provision that
19		would be charged to the Reserve for Depreciation from January 2010 through December
20		2010 (twelve months) for plant existing at December 31, 2009; and (ii) by estimating the
21		depreciation/amortization attributable to projected net plant additions from January 2010
22		through December 2010. In the second step, we assumed the net plant additions occurred

1		ratably over this period except for the Iatan Unit 2 generating unit for which we utilized
2		the expected in-service date.
3	Q:	How were the retirement and net salvage components included in the roll-forward?
4	A:	Retirements were primarily based on budgeted activity during the period January 2010
5		through December 2010. The adjustment also recognized additional retirements of
6		general plant identified in the results of the depreciation study supported by Company
7		witness John J. Spanos. Projected changes to net salvage were based on a normalized
8		level of net expenditures incurred during 2009.
9	Q:	Is the Reserve for Depreciation adjusted for any other items?
10	A:	Yes. Although the additional amortization to maintain credit ratios was recorded to the
11		Reserve for Depreciation on the financial books, this component has been removed from
12		the Reserve for Depreciation and shown as a separate rate base offset, consistent with the
13		presentation used by the MPSC Staff in prior rate cases. Additionally, the cumulative
14		balance at December 31, 2009 has been adjusted for the roll-forward of the additional
15		amortization to maintain credit ratios from January 1, 2010 to December 31, 2010.
16	Q:	Has the cumulative additional amortization balance been spread to plant account
17		balances in this rate proceeding?
18	A:	Yes, in order to calculate the proposed depreciation rates used in this case, the cumulative
19		balance was spread ratably to the various plant reserve accounts in the depreciation study
20		sponsored by Mr. Spanos. However, for purposes of this filing, the cumulative balance is

shown in total as a rate base offset separate from the Reserve for Depreciation.

1	Q:	Did the Stipulation and Agreement in Case No. EO-2005-0329 ("Regulatory Plan")
2		approved by the Commission on July 28, 2005 ("Regulatory Plan S&A") address the
3		method to be used to spread the cumulative additional amortization to the various
4		plant accounts?
5	A:	No, it did not.
6	Q:	Does the Company recommend that the spreading method employed in the
7		depreciation study be used to spread the additional amortization balance over the
8		plant accounts for book purposes?
9	A:	Yes, the Company recommends, and requests of the Commission, that the approach used
10		to spread the cumulative additional amortization balance in the depreciation study
11		sponsored by Company witness John Spanos in his direct testimony be used to spread the
12		balance in the Company's property records system. The portion of the cumulative
13		Missouri jurisdictional balance assigned to each plant reserve account would be identified
14		as pertaining 100% to the Missouri jurisdiction.
15	Q:	Was the method described above applied to other depreciation reserve balances in
16		addition to the additional amortizations to maintain credit ratios?
17	A:	Yes. In Case No. EO-94-199, KCP&L was authorized to accrue an additional \$3.5
18		million Missouri jurisdictional amortization annually beginning July 1996. Under the
19		terms of the Regulatory Plan S&A, this amortization ceased as of the January 1, 2007
20		effective date of new rates approved in Case No. ER-2006-0314 ("2006 Case"). The
21		approach used in the depreciation study to spread the cumulative additional amortizations
22		to maintain credit ratios was also used to spread the \$36.7 million Missouri jurisdictional
23		cumulative reserve balance resulting from Case No. EO-94-199.

RB-44 AND CS-44 ECONOMIC RELIEF PILOT PROGRAM

2	O :	Please	explain	adjustment RI	B-44.

1

9

13

14

15

16

17

18

19

20

Q:

A:

As part of the 2009 S&A, the Company was authorized to defer to a regulatory asset 50% of its Economic Relief Pilot Program ("ERPP") costs until the next KCP&L rate case (the current case), with cost recovery to be determined at that time. The remaining 50% of costs are to be borne by KCP&L's shareholders. This adjustment reflects projected deferred ERPP costs as of December 31, 2010. Company witness Jim Alberts discusses the ERPP program in his direct testimony in this case.

Q: Please explain adjustment CS-44.

10 A: This adjustment reflects a three-year amortization of the projected deferred ERPP costs at
11 December 31, 2010. This adjustment also includes one-half of the ongoing level of
12 expenses expected for this program.

Why was this amortization period selected?

A three-year period was selected to coincide with the three-year pilot program described in the ERPP tariff approved by the Commission in the 2009 Case. The Company requests the Commission to authorize in this rate proceeding a three-year amortization of ERPP costs deferred prior to the establishment of a cost recovery mechanism in this case. The Company also requests that cost recovery for ongoing costs during the pilot program be established so that one-half of the ongoing costs for this program is included in cost of service.

1		RB-50 PREPAYMENTS
2	Q:	Please explain adjustment RB-50.
3	A:	We normalized this rate base item based on a thirteen-month average of prepayment
4		balances. Prepayment amounts can vary widely during the course of the year and an
5		averaging method minimizes these fluctuations.
6	Q:	What accounts are included in prepayments?
7	A:	The most significant relate to prepaid insurance, capacity and transmission charges, rent
8		and software maintenance.
9	Q:	What period was used for the thirteen-month averaging?
10	A:	We used the period December 2008 through December 2009.
11	Q:	Did the MPSC Staff use thirteen-month averaging for Prepayments in the 2009
12		Case?
13	A:	Yes, they did.
14		RB-55 AND CS-22 EMISSION ALLOWANCES
15	Q:	Please explain adjustment RB-55.
16	A:	The Regulatory Plan S&A, with amendments approved on August 23, 2005, included an
17		SO ₂ Emission Allowance Management Policy ("SEAMP"). This policy provides for
18		KCP&L to sell sulfur dioxide ("SO _{2"}) emission allowances in accordance with the initial
19		SO ₂ Plan submitted to the MPSC, the MPSC Staff and other parties in January 2005, as
20		updated. Company witness Wm. Edward Blunk discusses the SEAMP in more detail in
21		his direct testimony in this rate proceeding.
22		The Regulatory Plan S&A requires KCP&L to record all SO ₂ emission allowance sales
23		proceeds as a regulatory liability in Account 254. The liability is reduced by premiums

1		that result from the Company's purchase of lower sulfur coal than specified under
2		contracts. Adjustment RB-55 reflects changes to the projected regulatory liability
3		balance through December 31, 2010, based on expected allowance sales and lower sulfur
4		coal premiums during the period January 1, 2010 through that date.
5	Q:	What is the projected SO ₂ regulatory liability that is included in rate base in this
6		rate proceeding?
7	A:	We have projected a December 31, 2010 balance of \$86.8 million (total company), less
8		(\$963,000) of Missouri jurisdictional rate base attributable to low sulfur coal premiums
9		incurred in 2007.
10	Q:	Is the Company authorized to continue this regulatory treatment following the
11		conclusion of this rate proceeding?
12	A:	This regulatory treatment will end with the conclusion of the Regulatory Plan, absent
13		Commission authorization to continue. Therefore, KCP&L requests Commission
14		approval to continue the process authorized by the Commission in the Regulatory Plan to
15		defer proceeds from future SO ₂ allowance sales, including the annual Environmental
16		Protection Agency auction, and to offset the deferred gains with coal premiums on the
17		purchase of low sulfur coal.
18	Q:	Please explain adjustment CS-22.
19	A:	This adjustment reflects an amortization of this SO ₂ proceeds regulatory liability as
20		projected at December 31, 2010.
21	Q:	Over what time period is this regulatory liability to be amortized?
22	A:	The Regulatory Plan S&A states that the regulatory liability will be amortized over a time
23		period to be determined in the last rate case of the Regulatory Plan, the current rate case.

1	Q:	What time period does the Company recommend for such amortization?
2	A:	KCP&L recommends that the regulatory liability be amortized over the remaining
3		depreciable life of the Company's environmental equipment. The Regulatory Plan S&A
4		and the Commission's Order approving that Stipulation and Agreement document the
5		link between the SO ₂ sales, and the resulting availability of funds, and the Company's
6		need for funds to install significant environmental equipment in the succeeding years.
7	Q:	What is the remaining depreciable life of the Company's environmental equipment?
8	A:	Based on the depreciation study filed with this rate case, sponsored by Company witness
9		John Spanos in his direct testimony, the remaining depreciable life of FERC plant
10		account 312, which contains the bulk of the environmental equipment, is 21 years.
11	Q:	What is the Company's specific request of the Commission regarding SO ₂
12		amortization?
13	A:	KCP&L requests Commission approval to amortize net SO ₂ proceeds over 21 years, the
14		remaining depreciable life of FERC plant account 312, with allocation between Missouri
15		and Kansas to vary from year-to-year based on the applicable allocators for that year. We
16		anticipate that the amortization amount established in this case will be adjusted in each
17		future rate case based on the then unamortized balance and the current remaining
18		depreciable life.
19		RB-65, RB-5 AND CS-65 PENSION COSTS
20	Q:	Please explain adjustments RB-65 and CS-65.
21	A:	These adjustments consist of three components:
22		(a) Expense - adjust Financial Accounting Standard No. 87 "Employers' Accounting
23		for Pensions" ("FAS 87"), No. 88 "Employers' Accounting for Settlements and

1		Curtailments of Defined Benefit Pension Plans and for Termination Benefits"
2		("FAS 88"), and No. 158 "Employers' Accounting for Defined Benefit Pension
3		and Other Postretirement Plans" ("FAS 158") pension expense for ratemaking
4		purposes to an annualized level. As a result of the Financial Accounting
5		Standards Board issuance of the Accounting Standards Codification ("ASC") in
6		June 2009, the guidance for pensions formerly included within FAS 87, 88, and
7		158 is now included in the ASC within Topic 715, "Compensation - Retirement
8		Benefits."
9		(b) Rate base - roll forward the FAS 87 regulatory asset to the projected December
10		31, 2010 balance; and
11		(c) Rate base- roll forward the net prepaid pension asset to the projected December
12		31, 2010 balance.
13	Q:	Do these pension adjustments take into consideration payroll billed to joint venture
14		partners, billed to companies affiliated with KCP&L ("affiliated companies"), and
15		charged to capital?
16	A:	Yes, they do, based on data from the payroll adjustment discussed later in this testimony
17		(adjustment CS-50).
18	Q:	Do these pension adjustments include the effects of the Company's interest in the
19		Wolf Creek generating station pension plans?
20	A:	Yes, they do.
21	Q:	Please explain component (a).
22	A:	FAS 87 expense was annualized based on information provided by the Company's
23		actuarial firms. Company witness C. Kenneth Vogl discusses the actuarial expense in his

1		direct testimony in this case. In addition, annualized pension expense includes an
2		amortization of the FAS 87, FAS 88 and FAS 158 regulatory assets, as discussed below.
3	Q:	Was annualized pension expense determined in accordance with established
4		regulatory practice?
5	A:	Yes, the calculation was made in accordance with the methodology documented in the
6		Regulatory Plan S&A and the 2009 S&A.
7	Q:	What is the amount of FAS 87 expense on a total company Missouri basis currently
8		built into rates?
9	A:	The 2009 S&A established the annual amount built into rates at \$31,550,017, after
10		capitalized amounts and the portion of KCP&L's annual pension cost that is allocated to
11		KCP&L's joint partners in the Iatan and LaCygne generating stations, and before
12	_	inclusion of the amortization of the FAS 87, FAS 88 and FAS 158 regulatory assets and
13		Supplemental Executive Retirement Plan ("SERP") expense.
14	Q:	What is the nature of the FAS 88 regulatory asset amortization?
15	A:	The Company has incurred FAS 88 costs that are being amortized over five years
16		beginning January 1, 2008 in accordance with the 2009 S&A. The FAS 88 regulatory
17		asset is not included in rate base.
18	Q:	What is the nature of the FAS 158 amortization?
19	A:	The Company has incurred FAS 158 pension and Other Post-Employment Benefits
20		("OPEB") re-measurement costs that are being amortized over five years beginning
21		September 1, 2009 in accordance with the 2009 S&A. The OPEB cost is included in
22		adjustment CS-61 discussed later in this testimony. The FAS 158 regulatory asset is not

included in rate base.

1	Q:	Does annualized pension expense include SERP expense?
2	A:	No, that expense is considered separately, in adjustment CS-62 discussed later in this
3		testimony.
4	Q:	Please explain component (b).
5	A:	Component (b) includes two separate adjustments. First, adjustment RB-5 was made to
6		adjust the test year FAS 87 regulatory asset from a financial book basis to a total
7		company Missouri basis. Next, adjustment RB-65 was made to roll forward the FAS 87
8		regulatory asset, now expressed on a total company Missouri basis, to December 31,
9		2010, in order to determine the proper amount to be included in rate base and upon which
10		to base normalized amortization in this case.
11	Q:	What is the nature of this regulatory asset?
12	A:	This regulatory asset represents the cumulative unamortized difference in FAS 87
13		pension expense for ratemaking purposes (as discussed in component (a) above) and
14		pension expense built into rates during the corresponding periods.
15	Q:	When was the beginning point for accumulating this difference in FAS 87 pension
16		expense for ratemaking purposes and FAS 87 pension expense built into rates?
17	A:	The Regulatory Plan S&A specified the accumulation was to begin January 1, 2005.
18	Q:	How was the FAS 87 regulatory asset rolled forward to December 31, 2010?
19	A:	The FAS 87 pension regulatory asset at April 30, 2009 was adjusted by the projected
20		difference between FAS 87 expense for Missouri jurisdictional ratemaking purposes
21		based on pension costs provided by the Company's actuaries and FAS 87 expense
22		currently built into rates for the period May 1, 2009 to December 31, 2010. Finally, the

regulatory asset balance was reduced by projected amortization of the regulatory asset

1		balance over the period May 1, 2009 through December 31, 2010, based on a five-year
2		amortization period, as specified in the 2009 S&A.
3	Q:	What was the amount of the April 30, 2009 FAS 87 regulatory asset on a total
4		company Missouri basis included in the 2009 S&A?
5	A:	The amount stipulated in the 2009 S&A was \$15,038,779 at April 30, 2009, exclusive of
6		amounts allocated to KCP&L's joint partners.
7	Q:	Is the FAS 87 regulatory asset properly includable in rate base?
8	A:	Yes, the Commission authorized rate base inclusion in the Regulatory Plan S&A.
9	Q:	Please explain component (c).
10	A:	This adjustment was made to roll forward the net prepaid pension asset, expressed on a
11		total company Missouri basis, to December 31, 2010, in order to determine the proper
12		amount to be included in rate base.
13	Q:	What is the nature of this asset?
14	A:	This asset represents the initial net prepaid pension asset outlined in the Regulatory Plan
15		S&A (\$63,658,444 total company excluding joint partner shares, consisting of
16		\$34,694,918 Missouri; \$28,199,282 Kansas; and \$764,244 firm wholesale) reduced by
17		the difference between pension expense computed under FAS 87 and contributions made
18		-to the pension trusts from January 1, 2005 through December 31, 2009 and projected
19		through December 31, 2010.
20	Q:	How was the net prepaid pension asset rolled forward to December 31, 2010?
21	A:	The difference between FAS 87 expense for ratemaking purposes and projected
22		contributions for the period May 1, 2009 to December 31, 2010 was subtracted from the

April 30, 2009 net prepaid pension asset balance to determine the December 31, 2010 net

1		prepaid pension asset. The April 30, 2009 amount was based on the \$1,584,970 total
2		company amount, expressed on a Missouri basis, exclusive of joint partners' shares,
3		identified in the 2009 S&A.
4	Q:	Is the net prepaid pension asset properly includable in rate base?
5	A:	Yes, inclusion of this asset in rate base was authorized in the Regulatory Plan S&A.
6	Q:	Is there a net prepaid pension asset balance included in rate base in this rate
7		proceeding?
8	A:	No, the net prepaid pension asset balance has been reduced to \$0 and therefore there is no
9		balance in this rate case.
10	Q:	Is the Company proposing any changes to the net prepaid pension asset
11		mechanism?
12	A:	Yes, the Regulatory Plan S&A addresses three reasons why KCP&L would be allowed
13		rate recovery for contributions made to its pension trusts in excess of the Company's FAS
14		87 expense. However, since the Commission's approval of the Regulatory Plan S&A in
15		2005 the Pension Protection Act of 2006 ("PPA") has added certain additional reasons
16		that must be addressed. Mr. Vogl discusses proposed changes to the net prepaid pension
17		asset mechanism in his direct testimony.
18	Q:	Does the Company have any further request of the Commission regarding pension
19		costs?
20	A:	Yes. Because the Regulatory Plan will expire with the conclusion of this rate case
21		KCP&L requests that Section III(B)(1)(e) of the Regulatory Plan S&A continue in effect
22		after the conclusion of the Regulatory Plan.

1	Q:	Are there any of the provisions of this section of the Regulatory Plan S&A that do
2		not need to be extended?
3	A:	Yes, the provision in part (E)(5) of this section of the Regulatory Plan that allows rate
4		recovery for contributions made to the pension trust in excess of the FAS 87 expense for
5		avoidance of the recognition of a minimum pension liability has been rendered moot with
6		the adoption of FAS 158 and therefore does not need to be extended.
7	Q:	Is the regulatory treatment of pension expense in this rate filing consistent with the
8		Regulatory Plan S&A?
9	A:	Yes, it is.
10		RB-70 CUSTOMER DEPOSITS
11	Q:	Please explain adjustment RB-70.
12	A:	We examined customer deposit balances from December 2008 through December 2009.
13		We observed a declining balance and therefore chose to use the December 31, 2009
14		balances in rate base.
15		RB-71 CUSTOMER ADVANCES
16	Q:	Please explain adjustment RB-71.
17	A:	We examined customer advance balances from December 2008 through December 2009
18		and observed that the balance was unchanged during this period. Therefore, we used the
19		December 31, 2009 balance in rate base.
20		RB-72 MATERIALS AND SUPPLIES
21	Q:	Please explain adjustment RB-72.
22	A:	We reviewed the individual Material and Supplies category balances during the period
23		December 2008 through December 2009 to determine if there was a discernable trend,

1		either upward or downward, and also to determine volatility. If there was a trend, the test
2		year-end balance was not adjusted. Otherwise, a thirteen-month average was used.
3		RB-75 NUCLEAR FUEL INVENTORY
4	Q:	Please explain adjustment RB-75.
5	A:	We normalized this balance based on an eighteen-month average, to coincide with the
6		18-month Wolf Creek refueling cycle. Nuclear fuel inventory balances can vary widely
7		and an averaging method minimizes these fluctuations.
8	Q:	What period was used for the eighteen-month averaging?
9	A:	We used the period July 2009 through December 2010.
10	Q:	Did the MPSC Staff use eighteen-month averaging for nuclear fuel inventories in
11		the 2009 Case?
12	A:	Yes, they did.
13		RB-100 AND CS-100 ENERGY EFFICIENCY/DEMAND RESPONSE COSTS
14	Q:	Please explain adjustment RB-100.
15	A:	In accordance with the Regulatory Plan S&A, the Company established a regulatory asset
16		to accumulate energy efficiency/demand response ("EE/DR") costs, with rate base
17		treatment and a ten-year amortization. These programs are described in detail in
18		Appendix C to the Regulatory Plan S&A. Additionally, Company witness Tim Rush
19		discusses these programs and cost recovery in his direct testimony in this rate proceeding.
20		This adjustment rolls forward the deferred costs from December 31, 2009 to December
21		31, 2010 based on budgeted expenditures during this time period less amounts amortized

Q: Please explain adjustment CS-100.

2 A: This adjustment includes the annual amortization of EE/DR costs incurred under the Regulatory Plan S&A mechanism, based on the projected deferred cost balance included in adjustment RB-100 and a ten-year amortization.

RB-125/CS-125 INCOME TAXES

6 Q: Please explain RB-125.

A:

Q:

A:

We adjusted December 31, 2009 Accumulated Deferred Income Taxes ("ADIT") in adjustment RB-125. Deferred income taxes represent the tax on timing differences for deductions and income reported on KCP&L's income tax returns compared to what is reported for book purposes. ADIT represents the accumulated balance of these income tax timing differences at a point in time.

What are the ADIT adjustments to KCP&L's rate base?

Schedule 8 of Schedule JPW2010-1 itemizes ADIT and the RB-125 ADIT adjustments related to items included in KCP&L's rate base or net operating income. Schedule 8 reflects the deferred tax liabilities relating to depreciation and other expenses deducted for the tax return in excess of book deductions, resulting in a rate base decrease. Schedule 8 also reflects deferred tax assets that serve to increase rate base. The most significant of the deferred tax assets is the sale of SO₂ emission allowances (discussed earlier in this testimony, adjustment RB-55). For tax purposes, any gains on the sales of emission allowances are taxable when the allowances are sold. However, as agreed to in the Regulatory Plan S&A, KCP&L does not record the income associated with the sale in its current period income, but defers gains in a regulatory liability account. This timing difference of when income is recognized for income tax return purposes and when it will

be recognized for books creates a deferred tax asset, as future income tax liabilities will be lower for income tax reporting purposes as compared to book purposes when the deferred gains are amortized to book income in accordance with future regulatory orders (discussed earlier in this testimony, adjustment CS-22).

Why does ADIT affect rate base?

A:

Q:

A:

ADIT liabilities such as accelerated depreciation are considered a cost-free source of financing for ratemaking purposes. Ratepayers should not be required to provide for a return on plant in service that has been funded by the government in the form of reduced (albeit temporarily) taxes. As a result, ADIT liabilities are reflected as a rate base offset (reduction in rate base). Conversely, ADIT assets such as the timing difference related to SO₂ allowance proceeds increase rate base. KCP&L has paid taxes to the governments in advance of the time when such taxes are included in cost of service and are collected from ratepayers. To the extent taxes are paid, KCP&L must borrow money and/or use shareholder funds. The increase to rate base for deferred income tax assets allows shareholders to earn a return on shareholder provided funds until recovered from ratepayers through ratemaking.

17 Q: Please explain adjustment CS-125.

We adjusted test period income tax expense based on various adjustments to test year taxable income as discussed throughout this testimony and included on Schedule JPW2010-2. The adjusted income tax calculation is shown on Schedule 7 of Schedule JPW2010-1. The income tax adjustment includes current income taxes, deferred income taxes and the amortization of investment tax credits and certain other amortizations.

Q: Please explain the current income tax component in cost of service as calculated in Schedule 7.

A:

Jurisdictional operations and maintenance deductions and other adjustments are applied against jurisdictional revenues to derive net jurisdictional taxable income, which is then used to compute the jurisdictional current income tax expense component (current provision) for cost of service. For book purposes, these adjustments are the result of book versus tax differences and their implementation under normalization or flow-through tax methods. Each adjustment is either added to or subtracted from net income to derive net taxable income for ratemaking. For Schedule 7, however, a simplified methodology is used which eliminates the need to specifically identify all book and tax differences. Most significantly, all basis differences between the book basis and tax basis of assets are ignored in the current tax provision. The reversal of deferred income taxes resulting from prior basis differences is considered in the deferred tax section of Schedule 7, discussed later in this section of the testimony.

Accelerated tax depreciation is used in the currently payable calculation based on the tax basis of projected Plant in Service as identified in adjustment RB-20 (discussed earlier in this testimony). The difference between the accelerated depreciation deduction for tax depreciation on tax basis assets and the depreciation deduction calculated on a straight-line basis generates offsetting deferred income tax. The resulting income tax expense, considering both the current and deferred income tax components, reflects a level of total income taxes as if the depreciation deduction to arrive at taxable income was based solely on depreciation of projected tax basis assets calculated on a straight-line basis. This modified approach normalizes depreciation relating to the method differences

- (e.g., accelerated versus straight-line) and life differences. The Company and the MPSC
 Staff have used this modified approach in previous rate cases.
- 3 Q: Please describe the adjustments to derive net taxable income for ratemaking.

- 4 A: The following are the primary adjustments to derive net taxable income for ratemaking purposes:
 - Book depreciation and amortization expense, as calculated on Schedule 5 of Schedule JPW2010-1 and discussed later in this testimony (adjustments CS-120 through CS-122), have been excluded from the deductions listed on Schedule 7.

 As previously discussed, accelerated tax depreciation on both projected depreciable plant and projected amortizable plant is subtracted to derive taxable income.
 - The deduction for nuclear fuel amortization is treated consistently with the treatment of depreciation and amortization on Plant in Service.
 - The Manufacturer's Deduction amount is deducted from net income in deriving taxable income. This special deduction is allowable under Internal Revenue Code ("IRC"), Section 199. The deduction is based upon taxable income derived from the production of electricity. For 2009, the deduction was 6% of electricity production taxable income. The percentage increases to 9% after the 2009 tax year. The amount of the projected deduction is based upon the provision for the 2008 federal income tax return related to production net income before taxes, adjusted to reflect the 9% factor rather than the 6% factor. The amount of the Manufacturer's Deduction is intended to equate to the deduction on KCP&L's actual federal return. The deduction has not been adjusted to conform to Missouri

jurisdictional taxable income as shown on Schedule 7. This deduction is not an expense for book purposes; therefore, no deferred income taxes are created. The deduction results in a lower taxable income with ultimately a lower current income tax provision for cost of service.

Q:

A:

О

- A portion of Meals and Entertainment expenses are added back in deriving net taxable income, since a portion of certain meals and entertainment expenses are not tax deductible. This adjustment increases taxable income and ultimately increases the current income tax provision. The amount by which taxable income was increased is equal to the amount for the 2008 federal income tax return.
- Interest expense is subtracted to derive net taxable income. It is calculated by multiplying adjusted rate base by the weighted average cost of debt as recommended in this proceeding. This is referred to as interest synchronization because this calculation ensures that the interest expense deducted for deriving current taxable income equals the interest expense provided for in rates.
- Once the deductions and adjustments have been applied to net income to derive taxable income for ratemaking, what further deductions from taxable income are applied before calculating the three components of current income tax expense: City of Kansas City, Missouri ("KCMO") earnings tax, federal current income tax expense and Missouri state current income tax expense?
- There are no further deductions from taxable income before calculating KCMO earnings taxes. Before calculating federal income taxes, both KCMO earnings taxes and Missouri state income taxes are deducted. Before calculating Missouri state income taxes, KCMO earnings taxes and one-half of federal income taxes are deducted.

Q: How are the current income tax components calculated?

A: The current provision calculation utilizes a 0.65% KCMO earnings tax rate, a 35% federal tax rate, and a 6.25% Missouri state tax rate, each applied independently to the appropriate level of taxable income as discussed above. The KCMO earnings tax rate is a weighted rate based on a 1% earnings tax rate applied to 65% of Missouri jurisdictional net income. These earnings taxes are calculated first. Because of their mutual deductibility, federal and state income taxes are then calculated using a simultaneous equation. The federal and state income tax rates are used to compute the composite tax rate of 38.39% which is used to calculate deferred income taxes, discussed below. The composite tax rate reflects the federal benefit relating to deductible Missouri state income tax and Missouri allowing 50% of federal income taxes to be deducted when computing the current Missouri tax provision.

- 13 Q: Is the current federal tax expense determined by multiplying current taxable income by the federal income tax rate further reduced by tax credits?
- 15 A: Yes, the wind production tax credit reduces current federal income tax due.
- 16 Q: Please explain the wind production tax credit on Schedule 7.
 - A: IRC Section 45 allows for a federal tax credit based upon the amount of electricity produced by a qualifying wind generating facility. The credit is allowed for 10 years after the facility is placed in service. The adjustment shown on Schedule 7 as a direct reduction of federal currently payable income tax expense reflects the estimated production tax credits for KCP&L's wind generation facility for the twelve months ended December 31, 2010. This adjustment uses the presently allowable \$21.5 per megawatt

1		hour of generation multiplied by the annualized amount of estimated megawatt hours of
2		wind generation to determine the amount of credit.
3	Q:	In the past, federal income tax expense has also been reduced by a Research and
4		Development tax credit. Why is one not included on Schedule 7?
5	A:	The R&D tax credit expired in 2009 and, as of this time, has not been re-enacted for
6		2010.
7	Q:	Please explain the deferred income tax component of cost of service as calculated in
8		Schedule 7.
9	A:	The deferred income tax component of cost of service is primarily the result of applying
10		the composite income tax rate (38.39%) to the difference between projected accelerated
11		tax depreciation used to compute current income tax, as discussed earlier in this section
12		of the testimony, and projected tax basis straight-line depreciation. Tax basis straight-
13		line depreciation is computed by applying existing jurisdictional book straight-line
14		depreciation rates to each vintage year's depreciable tax basis.
15		Deferred income tax expense also includes the reversal of deferred income taxes
16		on basis timing differences over the related assets' jurisdictional book lives. These basis
17		difference adjustments serve to normalize the tax effect of items that generally are
18		deducted for tax purposes and capitalized for book purposes.
19		The other main deferred tax item is the average rate assumption method of
20		deferred tax amortization. This adjustment represents the amortization of excess deferred
21		income taxes over the remaining book lives. It reduces the income tax component of cost

of service. During the 1980s, the federal tax rate was higher than today's 35% rate.

Since deferred taxes were provided at the rate in effect when the originating timing

22

differences were generated, the deferred income taxes were provided at a rate higher than the tax rate that is expected to be in existence when the timing differences reverse and the taxes are due to the government. This difference in rates is being amortized into cost of service over the remaining book lives of the assets that generated the timing differences.

Q: Please explain the Investment Tax Credit ("ITC") amortization component in cost
 of service as calculated in Schedule 7.

ITC amortization reduces the income tax component of cost of service. The ITC amortization is separated into three components – Wolf Creek, non-Wolf Creek, and Iatan Unit 2.

Q: Why is this separation necessary?

A:

A:

In accordance with the Regulatory Plan S&A, KCP&L and the MPSC Staff agreed to extend the book lifespan of the Wolf Creek plant from 40 years to 60 years beginning August 7, 2005. As a result, the remaining unamortized amount of Wolf Creek's ITC is being amortized over the longer life. The lengthening of the book life from 40 to 60 years decreases the annual ITC amortization specific to Wolf Creek. The non-Wolf Creek ITC continues to be amortized ratably over the remaining book lives of the underlying assets. In addition, we have included an estimated amount for the amortization of Section 48A advanced coal credits for investments made in Iatan Unit 2 that will begin when the plant is placed in service in 2010. The separation of the ITC between Wolf Creek, non-Wolf Creek and Iatan Unit 2 allows us to use a specific allocation factor for each ITC component in deriving Missouri jurisdictional income tax cost of service.

Q:	Please	explain	the Iatan	2	component
----	--------	---------	-----------	---	-----------

A:

IRC Section 48A allows for a federal tax credit based upon the amount of qualified investment in advanced coal power plants. KCP&L applied for the Section 48A credit in 2007 and was allocated a maximum \$125 million of credits by the IRS ("IRS") in early 2008. This credit is considered an ITC under IRC Section 46 and KCP&L must defer and amortize the credit pursuant to the IRC 46(f)(2) election made by the Company in the past. The credit is being amortized over the estimated life span of Iatan Unit 2, or 50 years.

Q: Are there any other income tax amortizations that affect jurisdictional income tax cost of service?

A: Yes, there are two additional amortizations, relating to pre-1981 cost of removal and R&D tax credits, both of which were addressed in the Stipulation and Agreement As to Certain Issues in Case No. ER-2007-0291 ("2007 Case"), approved by the Commission on December 6, 2007 ("2007 S&A").

Q: Please discuss the cost of removal amortization.

In accordance with the 2007 S&A, the Company adopted normalization accounting for the tax timing difference associated with pre-1981 vintage cost of removal and began amortization of the cumulative income tax impact for the excess of KCP&L's actual cost of removal over the accrued cost included in book depreciation in prior years, over a 20 year period beginning January 1, 2008 (\$7,088,760, Missouri jurisdictional). As a result, the Company's annual deferred income tax expense increased by \$354,438 and this amortization is included as an increase in income tax expense on Schedule 7 of Schedule JPW2010-1.

Q: Please discuss the R&D tax credit amortization.

A:

As discussed later in this testimony (adjustment CS-104), the 2007 S&A required the Company to amortize R&D tax credits related to the 2000 through 2005 tax years over 60 months beginning with the first rate case after tax refunds based on the credits were received from IRS. The Company entered into a settlement agreement with the IRS whereby KCP&L received the tax refunds in 2008 and amortization began with the new rates effective September 1, 2009. Therefore, we have included an annualization on Schedule 7 of Schedule JPW2010-1 of \$194,111, as a direct reduction of federal deferred income tax expense for the amortization of R&D tax credits for the 2000 through 2005 tax years.

CASH WORKING CAPITAL

- 12 Q: Please discuss Cash Working Capital.
- 13 A: Cash working capital ("CWC") is included in rate base as summarized on Schedule 15 of Schedule JPW2010-1.
- 15 Q: Why is it necessary to calculate an amount of CWC?
 - A: CWC is the amount of cash required by a utility to pay the day-to-day expenses incurred to provide utility service to its customers. A lead/lag study is generally used to analyze the cash inflows from payments received by the company and the cash outflows for disbursements paid by the company. When the utility receives payment from its retail customers for utility service less quickly than it makes the disbursements for utility expenses, then the company would have positive cash working capital requirements. Conversely, when the utility receives payment from its retail customers for utility service

- 1 more quickly than it makes the disbursements for utility expenses, then the company 2 would have negative cash working capital requirements.
- 3 Q: How did you determine the amount of CWC?
- 4 A: We applied lead/lag factors used consistently in the previous cases under the Regulatory
 5 Plan to the appropriate cost of service amounts. The application of the individual
 6 lead/lag factors to applicable amounts is shown on Schedule 16 of JPW2010-1.
- 7 Q: Where are the factors used in this case identified?
- 8 A: The factors used in this case are identified on Schedule CWC% of Schedule JPW2010-1.
- 9 Q: Were any of the factors updated from those used in the 2009 Case?
- 10 A: We updated the retail revenue lag factor and the associated blended total revenue lag

 factor.
- 12 Q: Please explain how this factor was updated. _
- 13 We revised the retail revenue lead/lag factor primarily to reflect the proper collection A: 14 lag. In addition, the service period lag in the 2009 Case reflected a 366 day leap year and 15 it was necessary to revert to the standard 365 day year. The retail revenue factor used by 16 the Company in the 2009 Case was 27.295 days, made up of three components: service 17 period lag, billing lag and collection lag. The service period lag was restored from 15.25 18 days to 15.21 days.-The billing lag was retained in this case at 2.00 days. We reflected a 19 change in the collection lag from 10.045 days to 6.11 days. This resulted in a total retail 20 revenue lag of 23.32 days.
- 21 Q: Why was it necessary to update the collection lag?
- 22 A: The collection lag is a weighted value that reflects two components: 1) a zero-day lag
 23 for the percentage of receivables sold under KCP&L's Accounts Receivable facility (the

facility is discussed in more detail in the direct testimony of Company witness Michael W. Cline); and 2) an average number of days outstanding for the percentage that is not sold. For this case, both were updated. In June 2009, KCP&L renegotiated its Accounts Receivable sales facility from an effective \$70 million to \$95 million, impacting the percentage of accounts receivable that is sold. In addition, the average number of days that bills are outstanding was recalculated for the twelve months ended December 31, 2009.

What is the blended total revenue lag?

Q:

A:

In the first case filed under the Regulatory Plan, KCP&L calculated separate lag factors for retail revenues and for other revenues, which included bulk power sales and miscellaneous revenues. The MPSC Staff believed that it was more appropriate to calculate a single blended revenue lag factor. As part of a settlement of various cash working capital issues in that case, KCP&L adopted the use of a blended revenue factor based on unadjusted test year values.

15 Q: Why was it necessary to update the associated blended total revenue lag?

16 A: If the retail lag factor is updated it impacts the blended revenue lag factor. Additionally,
 17 the weighting of the components of revenues must be adjusted.

What other changes did KCP&L-make to the CWC lead/lag factors determined in the 2009 Case?

A: In the first case filed under the Regulatory Plan, KCP&L calculated separate lag factors for the three components of Missouri gross receipts taxes. The MPSC Staff used a single blended factor. In its filing in the 2009 case, the MPSC Staff used three individual

1	factors for the three components.	Consequently, KCPL	reverted to use	of three separate
2	factors in this filing.			

- 3 O: Was anything else modified in the calculation of cash working capital?
- 4 Yes. In settlement discussions in the 2009 case, KCP&L agreed to adopt a cash method A: 5 to determine the level of injuries and damages costs included in cost of service. Prior to 6 that time, the cost of service amount reflected amounts accrued when incurred but paid at 7 a later date. As discussed later in this testimony (adjustment CS-71), the cash method is 8 being used in KCP&L's current filing. Because of the adoption of a cash method to 9 value the cost of service amount for injuries and damages, there is no lag between cost 10 recognition and cash payment for ratemaking purposes. Therefore, the separate line for 11 injuries and damages has been eliminated from Schedule 16 of Schedule JPW2010-1 and 12 the associated cost of service amounts are included on that schedule in Net Other O&M 13 Expense.
- Q: Did KCP&L make any other changes to the CWC lead/lag factors determined in the
 2009 Case?
- 16 A: No, we did not.
- 17 Q: Were there any additional changes in KCP&L's processes, other than those
 18 described above, which would cause any of the other lead/lag factors to require
 19 modification from those used in the 2009 Case?
- A: No, none that we are aware of. Although KCP&L has expanded payroll and accounts payable processing functions as a result of Great Plains Energy Incorporated's acquisition of the former Aquila, Inc. electric business, the processes in place at the time that the lead/lag factors were developed are substantially unchanged.

2	A:	Lags for both blended revenues and payments were posted to Schedule CWC% of 2010
3		JPW-1. On this schedule, the net blended revenue/payment lag for each payment group
4		was calculated and the result was divided by 365 days to arrive at a net lead/lag factor.
5		These factors were subsequently applied to the applicable cost of service amounts on
6		Schedule 16 of JPW2010-1, where individual components of CWC were calculated. The
7		total resulting CWC amount was then carried forward to Schedule 15.
8		R-1 GROSS RECEIPT TAXES
9	Q:	Please explain adjustment R-1.
10	A:	This adjustment removes gross receipts taxes from both retail revenue, including forfeited
11		discounts, and general taxes, consistent with the adjustment made by both KCP&L and
12		the MPSC Staff in prior rate cases. This adjustment is made so that
13		annualized/normalized retail revenue reflects base or "bare" revenue only, consistent with
14		the tariffs.
15		R-21 FORFEITED DISCOUNTS
16	Q:	Please explain adjustment R-21.
17	A:	We normalized forfeited discounts by computing a Missouri-specific forfeited discount
18		factor based on test period forfeited discounts and revenue and applying it to Missour
19		jurisdictional weather-normalized revenue.
20		R-77 and R-78 EXCESS MARGIN REGULATORY LIABILITY
21	Q:	Please explain the excess margin regulatory liability.
22	A:	As discussed further in the direct testimonies of Company witnesses Burton Crawford
23		and Michael Schnitzer, KCP&L returns to ratepayers off-system sales margins realized in

How were the resulting lead/lag factors used?

Q:

excess of the 25th percentile level. The liability is recorded on the financial books as a credit to a regulatory liability (FERC account 254) and a debit to retail revenue (FERC account 449) in the period incurred. Interest accrues on this liability. The liability is amortized beginning with the effective date of the tariffs in which the revenue reduction is included. When the liability is amortized the liability account is reduced and retail revenue is increased.

7 Q: What regulatory liabilities exist for purposes of this rate case?

Excess margins were realized in 2007 (\$1,082,974) and 2008 (\$2,947,332), as documented in the 2009 S&A. That S&A stated that the amortization of these regulatory liabilities, plus accrued interest, was to begin September 1, 2009, based on a ten-year amortization period. The regulatory liability balances reflected in the 2009 S&A were adjusted to reflect 2009 true-up to the 2007 and 2008 excess margins.

What is the purpose of adjustments R-77 and 78?

Because revenue is reduced on the financial books for the entire amount of the liability when the liability is established, test year cost of service will be misstated when a liability is established during a test year. The entry to reverse the revenue-related impact of the liability established during the test year is made through adjustment R-77. The annualization of excess margin amortization occurs through adjustment R-78.

19 Q: Please explain adjustment R-77.

A:

A:

Q:

A:

The test year included an entry to true up both the 2007 and 2008 excess margins. As discussed above, that entry must be reversed to allow for cost of service in this case to include only a ten-year excess margin amortization.

l O :	Please	explain	adi	justment	R-78.

- A: Adjustment R-78 annualizes the amortization of these regulatory liabilities, including new activity, if any, and accrued interest through December 31, 2010.
- Q: Did the Company make an entry in 2009 to record a regulatory liability for excess
 margins realized in 2009?
- Margins realized from January 1, 2009 through August 31, 2009 did not exceed the 25th 6 A: 7 percentile amount established in the ER-2007-0291 S&A (\$51.0 million annually applied 8 on a pro-rata basis as established in the 2009 S&A). Whether any excess margins associated with the 25th percentile amount established in the ER-2009-0089 S&A (\$30 9 10 million annually applied on a pro-rata basis as established in the 2009 S&A) will be 11 realized during the twelve-month period September 1, 2009 through August 31, 2010 or 12 thereafter is unknown at this time and therefore no adjustment to the regulatory liability 13 has been made. If additional excess margins become known and measurable prior to the 14 true-up date, modifications to adjustment R-78 will be reflected as part of the true-up 15 proceeding. KCP&L continues to increase the regulatory liability for additional interest 16 on the unamortized amounts. The amortization of this additional interest through 17 December 31, 2010 was included in adjustment R-78.
- 18 Q: Why is the time period January 1, 2009 through August 31, 2009 relevant in this 19 rate case?
- 20 A: This time period reflects the time from the end of the 2008 margin accumulation through 21 the effective date of new rates in the 2009 Case.

CS-11 and RB-11 OUT-OF-PERIOD ITEMS/MISCELLANEOUS ADJUSTMENTS

2 Q: Please explain adjustment CS-11.

1

- 3 A: We adjusted certain expense transactions recorded during the test year from the cost of
- 4 service filing in this rate case. The following is a listing of the more significant
- 5 adjustments (all amounts are KCP&L total company):
- 6 Wind termination payment We removed from cost of service a \$7.5 million payment to
- 7 a vendor to terminate a Wind construction project.
- 8 <u>Corporate overhead allocation</u> Certain overhead costs recorded on KCP&L's books are
- 9 allocated to affiliated companies. We adjusted the test year allocation percentages to
- reflect percentages in effect in 2010, resulting in an increase in KCP&L's cost of service
- in this rate proceeding of about \$1.9 million.
- Non-recoverable costs The Company has identified certain costs recorded during the
- test year for which it is not seeking recovery in this rate proceeding, totaling about \$4.1
- million (total KCP&L amount). These costs primarily involve various employee
- appreciation costs, non-recurring additional compensation, officer long-term incentive
- compensation, and certain expense report charges. We believe the costs were ordinary
- and reasonable business expenses; however, we do not believe such costs should be borne
- by ratepayers. If we become aware of any additional costs of this nature included in the
- test year but not included in adjustment CS-11 we will accumulate such costs and provide
- this information to the MPSC Staff.
- 21 Q: Please discuss RB-11.
- 22 A: As discussed above under "Non-recoverable costs", the Company identified certain
- expense report charges for which it is not seeking recovery. A minor amount of these

costs were charged to construction work in progress. To be consistent, these charges were also removed from ratemaking consideration and have been reclassified to expense as a non-recoverable item.

CS-18 KANSAS CITY, MISSOURI EARNINGS TAX

Q: Please explain adjustment CS-18.

O:

A:

Q:

A:

A:

This adjustment removes the Kansas City, Missouri earnings tax test year expense from cost of service. This expense is recorded on the books as a general tax expense. However, it is included in the Company's revenue requirement model as an annualized component of the adjusted Missouri jurisdictional income tax expense, as discussed earlier in this testimony (adjustment RB-125/CS-125).

CS-4, CS-20 AND R-20 BAD DEBTS

Please explain adjustment CS-4.

This adjustment is necessary to reflect the test year provision for bad debt expense recorded on the books of Kansas City Power & Light Receivables Company ("KCREC"). Company witness Michael Cline discusses the sales of KCP&L receivables to KCREC in his direct testimony in this case.

Please explain adjustments CS-20 and R-20.

In adjustment CS-20 we adjust the provision for bad debt expense reflected in adjustment CS-4 by applying a Missouri-specific net bad debt write-off factor to Missouri test year jurisdictional revenue. In the bad debt portion of adjustment R-20, we then further adjusted bad debt expense based on the weather-normalization adjustment (R-20) sponsored by Company witness Tim M. Rush by applying this same write-off factor to the revenue adjustment. Finally, as shown on Schedule JPW2010-1, Schedule 1, Column

1		605, line 1-020, we adjusted bad debt expense for the requested revenue adjustment in
2		this case, again using the write-off factor.
3	Q:	How was the bad debt factor determined?
4	A:	We examined net bad debt write-offs on a Missouri-specific basis as compared to the
5		applicable revenues that resulted in the bad debts.
6	Q:	Over what period was this experience analyzed?
7	A:	Net bad debt write-offs were for the test year, January 2009 through December 2009,
8		while the related retail revenue was for the 12-month period July 2008 through June
9		2009.
10	Q:	Why were different periods used for the calculation?
11	A:	There is a significant time lag between the date that revenue is recorded and the date that
12		any resulting bad debt write-off is recorded, time spent on various collection efforts.
13		While the time can vary depending on circumstances, we assumed a six-month lag,
14		representing the standard amount of time between when a customer is first billed and the
15		time when an account is disconnected and the receivable subsequently written off.
16	Q:	The term "net" write-offs is used. What does it mean?
17	A:	This term refers to accounts written off less recoveries received on accounts previously
18		written off.
19		CS-36 WOLF CREEK REFUELING OUTAGE
20	Q:	Please explain adjustment CS-36.
21	A:	This adjustment consists of two components. The first component addresses the Wolf
22		Creek refueling outage annualization. The Wolf Creek nuclear generating station
23		refueling cycle is normally about 18 months. The Company defers the operations and

1	maintenance outage costs and amortizes the costs over the 18 months leading up to the
2	next refueling. This adjustment annualizes the Wolf Creek refueling expense.

3 Q: Why is a refueling annualization adjustment necessary in this case?

A: The test period amortizations include a mix of the Spring 2008 and the Fall 2009 refueling outages. Annualized expense should reflect the level of amortization expense relating entirely to the Fall 2009 refueling outage, since that will be the level of expense recognized for 2010. The annualization adjustment results in a full year's amortization expense for that refueling.

Please discuss the second component of adjustment CS-36.

10 A: The 2009 S&A required the Company to set up a regulatory asset, without rate base 11 treatment, for recovery of certain Spring 2008 costs over a three-year period beginning 12 September 1, 2009. This component of adjustment CS-36 annualizes the Missouri 13 jurisdictional amount in the test year for a full year amortization of that regulatory asset.

CS-38 ADDITIONAL AMORTIZATION

Q: Please explain adjustment CS-38.

9

14

15

16

17

18

19

20

A:

Q:

As required by the Regulatory Plan, annual amortization to maintain credit ratios is to cease effective with the current rate proceeding. Therefore, this adjustment removes the \$35.7 million amortization recorded during the test year. Cumulative annual amortization built into rates effective September 1, 2009 and not included in cost of service in this rate proceeding is \$42.4 million.

1		CS-40/41 TRANSMISSION AND DISTRIBUTION MAINTENANCE
2	Q:	Please explain adjustments CS-40 and 41.
3	A:	These adjustments are for the purpose of including a normal level of transmission and
4		distribution ("T&D") maintenance expense in the case, based on test year expense levels.
5	Q:	In the 2009 Case, KCP&L proposed using multi-year averaging together with the
6		Handy-Whitman Index ("HW Index") to address price volatility. Why did the
7		Company choose not to utilize this approach in the current rate case?
8	A:	We chose to use test year costs due to new vegetation management rules enacted in late
9		2007 and implemented during 2008. About 80% of T&D non-labor costs relate to the
0		vegetation management program and therefore using a five-year average of costs (2005-
1		2009) would have been distortive, since several of those years would not have included
2		the incremental costs associated with the new vegetation management rules. We
13		concluded that using test year costs would be more representative of current cost levels.
4	Q:	Does this mean the Company will not want to use multi-year averaging, with either
15		the HW Index or some other index, in the future?
6	A:	No, absent the effect of a significant new rule or process we believe multi-year averaging,
7		with consideration of price volatility, is the preferred normalization method. Once most,
8		if not all, of the years in a multi-year average include the effect of the new vegetation
19		management rules then a return to multi-year averaging, together with recognition of
20		price volatility, would be appropriate.

1	Q:	Do you believe HW Index factors are the best factors to use to normalize T&D costs,
2		when a multi-year normalization is appropriate.
3	A:	Probably not. The underlying data to the HW Index is strongly influenced by utility
4		production construction and operations; hence, its primary value lies in normalizing
5		production maintenance expense, as discussed later in this testimony (adjustment CS-42).
6		The contrast between T&D operations and production operations is clearly an "apple"
7		and "orange" comparison. As such, for T&D maintenance expense, other analysis is
8		more appropriate to better capture price volatility.
9	Q:	What is the Company's recommended alternative?
10	A:	Analysis using KCP&L-specific costs provides a more realistic view of the expected
11		trend in T&D maintenance costs.
12	Q:	What specific factor does the Company recommend to account for this volatility and
13		the rising cost environment?
14	A:	We recommend an escalation factor based on KCP&L-specific vegetation management
15		contractor rates. As noted above, vegetation management costs represent about 80% of
16		T&D non-labor maintenance costs, with about 95% of vegetation management cost
17		represented by contractor billings.
18	- Q:	What KCP&L-specific contractor rate escalation has the Company experienced in
19		recent years?
20	A:	We reviewed the years 2005-2009, or a five-year period in total. While the escalation
21		varied by year, the average annual vegetation management contractor rate escalation
22		experienced by the Company during this time period was about 4.2%.

1 Q: Is the contractor labor escalator factor, the HW Index, or any other factor that
2 takes into consideration price volatility, just a way for the Company to inflate future
3 costs?

No, not at all. KCP&L, in using a factor to account for price volatility, is not inflating historical expense but rather seeking to quantify a measurable trend, taking into consideration the volatility in the commodity markets and accounting for "same-year dollars." Price volatility factors provide an empirical source of historical escalation and allow for normalization of expense.

CS- 42 GENERATION MAINTENANCE

Please explain adjustment CS-42.

Q:

A:

O:

A:

A:

We normalized maintenance expense for FERC steam accounts 510-514 based on a seven-year average. Certain significant maintenance activities such as major boiler or turbine overhauls do not occur annually, but rather on a periodic cycle that may occur every two to seven years, depending on the type of maintenance. Typically, boiler outages are scheduled roughly every two years, with turbine outages scheduled roughly every seven years. The recommendation for normalizing maintenance expense for the steam accounts over a seven-year period is designed to cover the longest maintenance cycle. –

Do these scheduled outages result in significant incremental maintenance costs?

Yes, scheduled outages generally require the addition of contract crews to complete the necessary work in a reasonable timeframe. The maintenance cost for contractors, their equipment and the materials utilized during a routine scheduled overhaul will normally

result in an increase in maintenance costs of several million dollars or more over the 2 amount of costs experienced in a non-outage period.

17

18

19

20

21

A:

A:

Q: Are there differences between how the Company addressed the maintenance steam accounts and the other production accounts (551-554) in this rate proceeding?

The other production accounts would not normally have large variances in maintenance expense and therefore KCP&L proposes using test year dollars as the basis for cost of service for these accounts. Another reason for not normalizing maintenance costs for these accounts is that KCP&L has placed in service several of the combustion turbine units in recent years and therefore there is not a long maintenance history. For example, the Company added five simple cycle combustion turbines in 2003, with maintenance costs being lower than normal the next couple of years because the work was covered by warranties. Additionally, the Company placed in service its Spearville Wind Energy Facility in 2006.

14 How were the steam production maintenance expenses normalized? Q:

KCP&L restated its maintenance expenses for 2003 through 2009 in July 2009 dollars, by use of the HW Index, North-Central Region, leaving the 2009 test year dollars unadjusted. The sum of the resulting amounts was used to compute a seven-year average of these expenses. To accurately compare historical costs to current costs, the costs must take into account cost fluctuations and view expenditures in "same-year-dollars." As discussed earlier in this testimony, the HW Index is a highly recognized independent source of historical cost fluctuations, particularly for production accounts.

1	Q:	Has KCP&L compared its own internal cost fluctuations to the proposed HW
2		Index?
3	A:	Yes. We reviewed our maintenance costs excluding KCP&L labor and determined that
4		approximately 60% of these costs were contractor labor costs, with the other 40%
5		material costs. We reviewed the contractor labor rate fluctuations for the top three
6		utilized crafts over the last five years. We reviewed high use material cost fluctuations
7		over this same five-year period, with an emphasis on stock items with consistent unit or
8		measure.
9	Q:	What was the relationship between KCP&L's actual local cost trends and the
10		proposed HW Index?
11	A:	We found that the Company's average escalation rate during this time period, contractor
12		and material costs combined, was higher than the HW Index Therefore, KCP&I
13		believes that the results of this study of local conditions justifies the use of the more
14		conservative HW Index to normalize production maintenance expense.
15		CS-45 TRANSMISSION OF ELECTRICITY BY OTHERS
16	Q:	Please explain adjustment CS-45.
17	A:	We annualized transmission costs recorded in FERC account 565 based on expected costs
18		once Iatan 2 is placed in service. We-also projected costs related to Southwest Powe
19		Pool ("SPP") base plan upgrades.
20	Q:	Is transmission expense expected to increase significantly once latan 2 is placed in
21		service?

Yes, with the increase primarily attributable to increased off-system sales.

22

A:

Q: Please discuss the base plan funding impact.

12

13

14

15

16

17

18

19

A:

SPP's expansion plan proposes regional transmission additions and includes a detailed list of projects in order to achieve the plan. A major portion of the expansion plan includes those projects that are termed "base plan upgrades," which are those transmission additions required to meet the mandatory North American Electric Reliability Corporation and SPP reliability standards and criteria and transmission additions to provide service to SPP customers from designated power resources. Due to the nature of the interconnected transmission system, these base-plan transmission additions produce reliability and transmission service benefits across the SPP region. Therefore, SPP employs a cost allocation methodology to provide sharing of costs for base-plan transmission additions. Currently, the SPP cost allocation calls for one-third of the project cost to be shared by all SPP members, and the remaining two-thirds of the project cost to be allocated among the members that directly benefit from the project. Furthermore, with the recent introduction of balanced portfolio projects and the expected future expansion of base plan upgrades to include 100 percent regional funding for transmission facilities at voltages over 300 kV, the transmission upgrade costs assessed by SPP are anticipated to increase substantially in coming years. For the current SPP transmission expansion plan, KCPL has projected funding obligations of approximately \$2.4 million in 2010 (total company).

1	Q:	What is the total Account 565 cost that the Company has included in its cost of
2		service in this case?
3	A:	We have included about \$18.3 million (total company). This amount is one of the
4		components included in the transmission tracker request discussed by Company witness
5		Tim Rush in his direct testimony in this case.
6		CS-48 IATAN 2 OPERATIONS AND MAINTENANCE EXPENSE
7	Q:	Please explain adjustment CS-48.
8	A:	As I discussed earlier in this testimony (adjustment RB-20), the Iatan 2 generating unit is
9		scheduled to go into service in late 2010. We have annualized operations and
10		maintenance costs based on annualized costs expected once Iatan 2 becomes operational,
11		excluding fuel and internal labor-related costs, which are addressed elsewhere.
12		CS-50 PAYROLL
13	Q:	Please explain adjustment CS-50.
14	A:	We annualized payroll expense based on the employee headcount as of March 1, 2010,
15		multiplied by pay rates expected to be in effect as of December 31, 2010.
16	Q:	How were pay rates determined?
17	A:	Pay rates for bargaining (union) employees were based on contractual agreements. Pay
18		rates for non-bargaining employees were based on annual salary adjustments expected to

be in effect as of December 31, 2010.

1	Q:	Were amounts over and above base pay, such as overtime, premium pay, etc.
2		included in the payroll annualization?
3	A:	Yes, overtime was annualized at an amount equal to the average of the amounts incurred
4		for the period 2007 through 2009, adjusted for labor escalations. Amounts were included
5		for other categories at test year levels.
6	Q:	Does annualized payroll include payroll KCP&L billed to GMO and Great Plains
7		Energy Incorporated?
8	A:	The annualization process includes all payroll, since all employees are now KCP&L
9		employees. However, annualized payroll included in this rate proceeding is reduced by
10		the amount that would be billed out to these affiliated companies.
11	Q:	Was payroll expense associated with the Company's interest in the Wolf Creek
12		generating station annualized in a similar manner?
13	A:	Yes, it was.
14	Q:	Does the payroll annualization adjustment take into consideration payroll billed to
15		joint venture partners and payroll charged to capital?
16	A:	Yes, the payroll annualization adjustment takes these factors into consideration.
17		CS-51 INCENTIVE COMPENSATION
18	Q:	Please explain adjustment CS-51.
19	A:	We annualized incentive compensation based on the target level (mid-point) and March
20		1, 2010 salary levels.

1	Q:	Why was this approach taken rather than a multi-year average?
2	A:	The Company and the MPSC Staff have used multi-year averages in past rate cases.
3		However, KCP&L significantly restructured its incentive compensation plans effective
4		January 2009. Therefore, averaging would not be appropriate in this rate case.
5	Q:	Please discuss the changes made to the plans in 2009.
6	A:	The most significant change was the removal of the requirement that the Company meet
7		an earnings per share target for the year in order for the various incentive compensation
8		plans to pay out. The plans continue to have various company measures, including
9		customer service, service and equipment reliability, cost control, and safety, as well as
10		divisional and personal measures.
11	Q:	Is the officer incentive program included in the annualized incentive expense?
12	A:	The portion related to performance measures (approximately 40%), exclusive of earnings
13		measures, is included in this case; the remainder, 60% of the total, is not.
14	Q:	Does this adjustment take into consideration payroll billed to joint venture partners
15		and affiliated companies and payroll charged to capital?
16	A:	Yes, based on data from the payroll adjustment (adjustment CS-50).
17		<u>CS-52 401(k)</u>
18	Q:	Please explain adjustment CS-52.
19	A:	We adjusted 401(k) expense to an annualized level by applying the average matching
20		percentage from the September 30, 2009 payroll to the O&M adjustment for annualized
21		payroll (adjustment CS-50), excluding bargaining unit overtime, and incentive
22		compensation (adjustment CS-51).

1	Q:	Does this adjustment take into consideration payroll billed to joint venture partners
2		and affiliated companies and payroll charged to capital?
3	A:	Yes, based on data from the payroll adjustment (adjustment CS-50).
4		CS-53 PAYROLL TAXES
5	Q:	Please explain adjustment CS-53.
6	A:	We annualized FICA payroll tax expense by applying the average test year FICA percent
7		(FICA expense/payroll expense) to the O&M portions of the annualized payroll
8		adjustment (adjustment CS-50) and incentive compensation adjustment (adjustment CS-
9		51).
10	Q:	Does this adjustment take into consideration payroll billed to joint venture partners
11		and affiliated companies and payroll charged to capital?
12	A:	Yes, based on data from the payroll adjustment (adjustment CS-50).
13		CS-54 RELOCATION
14	Q:	Please explain adjustment CS-54.
15	A:	We normalized relocation expense by averaging relocation costs over the period 2007
16		through 2009.
17		CS-55 SEVERANCE
18	Q:	Please explain adjustment CS-55.
19	A:	We normalized severance costs by averaging severance costs, excluding the talent
20		assessment program costs incurred in 2006, over the period 2007 through 2009. The
21		talent assessment program is discussed in the adjustment CS-101 section later in this
22		testimony

'		CS-00 OTHER DEIVEFTIS
2	Q:	Please explain adjustment CS-60.
3	A:	We annualized these costs based on projected costs included in the 2010 Budget.
4	Q:	What types of benefits are included in this category?
5	A:	The most significant benefit is medical expense, which comprises about 80% of other
6		benefit expense.
7	Q:	Does this adjustment take into consideration payroll billed to joint venture partners
8		and affiliated companies and payroll charged to capital?
9	A:	Yes, based on data from the payroll adjustment (adjustment CS-50).
10	Q:	Was other benefit expense associated with the Company's interest in the Wolf Creek
11		generating station annualized in a similar manner?
12	A:	Yes, it was.
13		CS-61 OTHER POST-EMPLOYMENT BENEFITS
14	Q:	Please explain adjustment CS-61.
15	A:	We annualized OPEB expense based on the 2010 actuarial reports, and amortizations
16		authorized in prior rate cases including amortization of deferred FAS 88 OPEB costs
17		(authorized in the 2007 Case) and certain re-measurement costs discussed earlier in this
18		testimony under adjustment RB-65/CS-65 in the discussion of the FAS 158 regulatory
19		asset (authorized in the 2009 Case).
20	Q:	Does this adjustment take into consideration payroll billed to joint venture partners
21		and affiliated companies and payroll charged to capital?
22	A:	Yes, based on data from the payroll adjustment (adjustment CS-50).

- 1 Q: Was OPEB expense associated with the Company's interest in the Wolf Creek
- 2 generating station annualized in a similar manner?
- 3 A: Yes, it was.

A:

- 4 Q: Are there any other OPEB issues you would like to discuss at this time?
- Yes. KCP&L requests a tracker mechanism for OPEB expense, whereby any excess or deficiency of the Company's OPEB rate allowance, compared to its ongoing level of OPEB expense, would be treated as a regulatory asset or liability which would then be included in KCP&L's rate base and amortized, as an addition or reduction to OPEB expense, over a five-year period.
- 10 Q: How would the regulatory asset or liability be tracked?
 - A regulatory asset or liability would be established on the Company's books to track the difference between the level of OPEB expense during the rate period and the level of OPEB expense built into rates for that period, similar to the pension tracking mechanism discussed by Company witness C. Kenneth Vogl in his direct testimony. If the OPEB expense during the period is more than the expense built into rates for the period, the Company would establish a regulatory asset. If the OPEB expense during the period is less than the expense built into rates for the period, the Company would decrease any existing regulatory asset or establish a regulatory liability. If the OPEB expense becomes negative, a regulatory liability equal to the difference between the level of OPEB expense built into rates for that period and \$0 would be established. Since this is a cash item, the regulatory asset or liability would be included in rate base and amortized over 5 years in the next rate case.

1		CS-62 SUPPLEMENTAL EXECUTIVE RETIREMENT PLAN
2	Q:	Please explain adjustment CS-62.
3	A:	This adjustment normalizes SERP expense based on average SERP payouts during the
4		period 2001-2009.
5	Q:	Why does this expense have to be normalized?
6	A:	The expense varies considerably from year-to-year because most eligible retirees choose
7		a lump sum payment as opposed to an annuity. Therefore, averaging over several years
8		provides a more reasonable, stable cost of service expense.
9	Q:	By basing the normalization on actual payouts rather than FAS 87 accrued expense,
10		is there a duplication of costs between adjustment CS-65, discussed earlier in this
11		testimony, and adjustment CS-62?
12 .	- A:	No, the SERP component is not included in adjustment CS-65 in either the test year book
13		amount or the projected amount.
14		CS-70 INSURANCE
15	Q:	Please explain adjustment CS-70.
16	A:	We annualized insurance costs based on anticipated premiums projected to be in effect on
17		December 31, 2010. These premiums include the following types of coverage: property,
18		directors and officers, workers' compensation, bonds, fiduciary liability, general and
19		excess liability, crime, and auto liability.
20	Q:	Does this adjustment consider on-going insurance requirements related to Iatan 2?
21	Δ.	Ves it does

1	Q:	Does this adjustment take into consideration insurance billed to joint venture
2		partners and affiliated companies?
3	A:	Yes, it does.
4		CS-71 INJURIES AND DAMAGES
5	Q:	Please explain adjustment CS-71.
6	A:	We normalized Injuries and Damages ("I&D") costs based on average payout history
7		during the period 2007 through 2009 as reflected in FERC account 228.2. This account
8		captures all accrued claims for general liability, worker's compensation, property
9		damage, and auto liability costs. The expenses are included in FERC account 925. The
10		liability reserve is relieved when claims are paid under these four categories.
11	Q:	Does account 925 also include costs charged directly to that account?
12	A:	Yes, for smaller dollar claims. We normalized these expenses over the same time period
13		as the larger claims.
14	Q:	Why was a multi-year average chosen?
15	A:	I&D claims and settlements of these claims can vary significantly from year to year. A
16		period of three years was used to establish an appropriate on-going level of this expense
17		by leveling out fluctuations in the payouts from the reserve account that can exist from
18		one year to the next depending on claims activity and settlements.
19		CS-10 AND CS-76 CUSTOMER DEPOSIT INTEREST
20	Q:	Please explain adjustment CS-10.
21	A:	This adjustment is necessary to include test year customer deposit interest in cost of
22		service

1	Ų:	Please explain adjustment CS-/6.
2	A:	We annualized customer deposit interest in accordance with the Company's tariff, which
3		states that the interest rate established for each year for Missouri customer deposits will
4		be based on the December 1 prime rate published in the Wall Street Journal, plus 100
5		basis points. The rate used in this adjustment for Missouri deposits is the 2010 rate of
6		4.25%.
7	Q:	What customer deposit balance was this interest rate applied to?
8	A:	The interest rate was applied to the Missouri customer deposit balance determined in
9		adjustment RB-70, discussed earlier in this testimony.
10		CS-77 CREDIT CARD PROGRAM
11	Q:	Please explain adjustment CS-77.
12	A:	We annualized credit card program expenses based on participation levels and costs
13		anticipated at December 31, 2010.
14	Q:	What is the status of the implementation of KCP&L's credit card payment
15		program?
16	A:	KCP&L began offering credit card payment options to its residential customers in 2007,
17		initially with submission and processing through its interactive voice response system.
18	_	Also, a one-time payment option was available through KCP&L's Website. In February,
19		2008, the Company offered a recurring credit card payment option with enrollment
20		through its Website.

CS-80 RATE CASE COSTS

2	Q:	Please explain adjustment CS-80.
3	A:	We annualized rate case costs by including an amortization of costs incurred in the 2009
4		Case and projected costs for the current rate proceeding. Costs incurred in prior
5		Regulatory Plan rate cases will have been fully recovered by the time rates become
6		effective in the current rate proceeding; therefore, associated test year amortization was
7		removed from cost of service in this case.
8	Q:	Why are rate case costs being deferred?
9	A:	Expenses incurred for each Missouri rate case are deferred in a regulatory asset and
10		amortized over two years, consistent with ratemaking treatment in previous cases under
11		the Regulatory Plan.
12	Q:	How was rate case cost related to the current Missouri rate proceeding estimated?
13	A:	Costs incurred in the past cases under the Regulatory Plan were used as a guide in
14		estimating current rate case costs, along with additional costs expected to be incurred in
15		this rate proceeding primarily related to Iatan 2, jurisdictional allocations and a
16		depreciation study.
17	Q:	How were amounts from prior cases that had been over-amortized considered?
18	A:	Consistent with the 2009 S&A, amounts over-amortized from the 2006 Case were used to
19		reduce deferred costs incurred for the 2009 Case.
20	Q:	How were amounts incurred after the true up date for the last case considered?
21	A:	Amounts for ER-2009-0089 that were incurred subsequent to the April 30, 2009 true up
22		date in that case were transferred to the current case

CS-85 REGULATORY ASSESSMENTS

2	Q:	Please explain adjustment CS-85.
3	A:	We annualized Missouri regulatory assessments and FERC Schedule 12 fees based on
4		assessment levels projected to be in effect in December 2010.
5	Q:	Why is it appropriate to include the FERC Schedule 12 fees in a Missouri retail rate
6		case?
7	A:	After the SPP was approved by FERC as a Regional Transmission Organization
8		("RTO"), FERC changed its assessment criteria for SPP member companies. Instead of
9		basing its annual assessment on wholesale transactions only, FERC began basing its
0		assessment on all load under SPP rates, including retail load served by member
1		companies. Under the new procedure, FERC bills SPP for the assessment, and SPP then
2		passes a share of this cost through to all point-to-point and network service customers it
3		serves. As a result, FERC's assessment basis for this charge now includes the retail, full
14		requirements, and grandfathered transmission loads for which KCP&L is responsible.
15		The overall magnitude of the assessment rose commensurately with this change in
16		FERC's assessment basis. With the change in methodology, the responsibility of bearing
17		the assessment cost becomes primarily a retail load responsibility since the bulk of load
18		that serves as the basis for the-SPP pass-through is retail load.
19	Q:	What is the amount of the Schedule 12 fees that the Company has included in its
20		cost of service in this case?
21	A:	We have included about \$1 million (total company). This amount is one of the
22		components included in the transmission tracker request discussed by Company witness
23		Tim Rush in his direct testimony in this case.

CS-86 SCHEDULE 1-A FEES

2	Q:	Please explain adjustment CS-86.
3	A:	We annualized SPP Schedule 1-A fees based on the annual funding levels expected to be
4		in effect on December 31, 2010.
5	Q:	Please discuss the nature of these fees.
6	A:	SPP finances its operations as an RTO through assessment of fees under Schedule 1-A of
7		its transmission tariff. These fees provide funds for its activities as an RTO, which
8		include regional transmission planning, processing and study of transmission and
9		generation interconnection service requests, management of congestion across the
10		transmission system, administering the SPP transmission tariff, serving as a reliability
11		coordinator, managing the power reserve sharing system, and operating the regional
12		energy imbalance market. Schedule 1-A apportions the costs of these services to the
13		network service customers of SPP based on relative shares of load at the time of the
14		twelve monthly system peaks.
15	Q:	What is the amount of the Schedule 1-A fees that the Company has included in its
16		cost of service in this case?
17	A:	We have included \$5.8 million (total company). This amount is one of the components
18		included in the transmission tracker request discussed by Company witness Tim Rush in
19		his direct testimony in this case.
20		CS-90 ADVERTISING
21	Q:	Please explain adjustment CS-90.
22	A:	We eliminated from the test year all advertising expenses coded to FERC accounts 909,
23		913 and 930100 that related to institutional or image advertising

1	Q:	With this elimination what types of advertising are still included in test year cost of
2		service?
3	A:	The primary types still remaining include safety, customer assistance, and energy
4		efficiency. Additionally, we have included in annualized advertising expense costs
5		related to the Company's Connections program.
6	Q:	Please discuss this program.
7	A:	Connections is a program started in 2009 to help customers manage through financially
8		challenging times. Programs include payment flexibility, assistance programs, energy
9		efficiency programs, and links to service agencies and community groups. Company
10		witness Jimmy D. Alberts discusses this program in more detail in his direct testimony in
11		this case.
12	Q:	Is this program a continuing program?
13	A:	Yes, the Company anticipates a continuing presence for this program.
14	Q:	What level of costs have been included in this case for the Connections program?
15	A:	We have included about \$700,000 (total company), the Company's share of the 2010
16		combined KCP&L/GMO budget of \$1 million.
17		CS-91 ADVERTISING REGULATORY ASSET
18	Q:	Please explain adjustment CS-91.
19	A:	This adjustment consists of two components, both of which are reflected on a Missouri
20		jurisdictional bases. First, under an informal agreement with the MPSC Staff in the 2007
21		Case certain test year advertising costs related to the Company's Regulatory Plan and rate
22		cases under that plan were reversed from the Company's cost of service, and set up a
23		regulatory asset to be amortized over two years beginning January 1, 2008. Since the

costs will be fully amortized and recovered by December 31, 2009, such test year costs have been removed from cost of service in this case.

Second, under the 2009 S&A similar advertising costs incurred during the test year in that case were included in a regulatory asset to be amortized over ten years beginning in September 2009. This adjustment annualizes that expense since the test year in this case includes only four months of amortization.

CS-92 DUES AND DONATIONS

Please explain adjustment CS-92.

Q:

A:

Q:

A:

We removed from cost of service dues paid to the Missouri Energy Development Association and costs incurred related to the Dollar-Aide match program, a program designed to assist customers who cannot otherwise pay their bills. Additionally, several smaller dues and donations were removed from cost of service, with the grand total of all removals being about \$279,000 (total company).

CS-101 TALENT ASSESSMENT

Please explain adjustment CS-101.

The Commission's Order in the 2007 Case required the Company to set up a regulatory asset, with no rate base treatment, for severance and outplacement costs associated with a 2006 talent assessment program, to be amortized over ten years beginning January 1, 2008. The test year cost of service reflects a full year's amortization expense and, therefore, net operating income is properly stated and requires no adjustment.

CS-103 SURFACE TRANSPORTATION BOARD LITIGATION

Please explain adjustment CS-103.

Q:

A:

The Company filed a rate complaint case on October 12, 2005, with the Surface Transportation Board ("STB"). In that rate complaint, KCP&L charged that Union Pacific Railroad's ("UP") rates for the movement of coal from origins in the Powder River Basin of Wyoming to KCP&L's Montrose Generating Station were unreasonably high. Deferral of these costs in a regulatory asset and amortization of the deferred costs over five years was authorized in the Commission's Order in the 2006 Case. The revenue requirement approved in the 2007 Case authorized recovery of additional costs incurred through September 30, 2007, also over a five-year amortization period. As authorized in the 2006 Case, any refund that KCP&L received would first offset any existing balance of STB unamortized costs, with the remainder of the refund offsetting fuel costs as determined in a future proceeding.

The STB reached a decision in the complaint case during 2008. Reparations received as a result of the settlement exceeded the unamortized costs and the net balance was reclassified as a regulatory liability. The Signatory Parties to the 2009 S&A agreed that the net liability of Missouri jurisdictional reparations less the unamortized Missouri jurisdictional litigation costs (\$1,017,593) would be amortized as a credit to expense over ten years beginning September 1, 2009, with no rate base treatment of the unamortized balance. Adjustment CS-103 compares the first full year of amortization of the Missouri jurisdictional net liability with the Missouri jurisdictional amortization included in the test year.

Company witness Wm. Edward Blunk discusses the STB litigation in more detail in his direct testimony in this rate proceeding.

What is included in the test year component of adjustment CS-103?

In the 2006 Case and the 2007 Case, the Commission agreed that KCP&L would be allowed to defer the costs of litigation before the STB and amortize these costs to expense over a five year period beginning January 1, 2007 and January 1, 2008, respectively. For the test year months of January 2009 through August 2009, the financial books included an expense for the monthly amortization of that regulatory asset as authorized in the 2006 Case and 2007 Case. Beginning in September 2009, the test year included a monthly amortization of the net deferred liability as authorized in the 2009 S&A.

CS-104 RESEARCH AND DEVELOPMENT TAX CREDIT

Please explain adjustment CS-104.

Q:

A:

O:

A:

In 2007 KCP&L amended its 2000-2005 federal income tax returns to take a credit for its R&D expenditures. In so doing the Company incurred consulting fees. In the Stipulation and Agreement As to Certain Issues in the 2007 Case, approved by the Commission on December 6, 2007, the parties agreed to reverse the Missouri jurisdictional consulting fees incurred related to the R&D tax credit studies from the Company's cost of service, and set up a regulatory asset for that cost. The parties agreed also to set up a regulatory liability for the Missouri jurisdictional R&D tax credits included as adjustments on the 2000-2005 amended tax returns filed in 2007. Both the regulatory asset and the regulatory liability were to be amortized over five years beginning with the effective date

1		of new rates in the first general rate case following the receipt of the refunds by the
2		Company.
3	Q:	Has the Company received the refunds?
4	A:	Yes, the funds were received in 2008. Accordingly, KCP&L included an amortization of
5		the consulting fees in the 2009 Case and recovery over five years began effective
6		September 1, 2009. Since the test year in this proceeding includes only four months of
7		amortization, an adjustment was necessary to annualize the amortization.
8	Q:	Does the income tax provision in this rate case include an amortization of the
9		regulatory liability?
10	A:	Yes, it does, as discussed earlier in this testimony (adjustments RB-125/CS-125).
11		CS-109 LEASES
12	Q:	Please explain CS-109.
13	A:	We annualized corporate headquarters lease costs, including rent, parking and electricity.
14		The Company moved out of its previous corporate headquarters effective September 30,
15		2009. Since the lease expense at the new location has changed from the amount recorded
16		during the test year an adjustment was necessary.
17	Q:	How was the annual lease expense of the new location calculated?
18	A:	The annualized expense was calculated as twelve times the monthly lease rate expected
19		to be in effect on December 31, 2010.
20		CS-115 LEGAL FEE REIMBURSEMENT
21	Q:	Please explain adjustment CS-115.
22	A:	The Company received a reimbursement during the fourth quarter 2008 for legal fees
23		incurred during 2006-2008 on a personal injury claim. Since the legal fees were included

in test years used for various Regulatory Plan rate cases, KCP&L believes the proper regulatory treatment of this reimbursement is to record a regulatory liability to return the proceeds to ratepayers over a three-year period. This recovery period was selected because the expenses were incurred and recovered by the Company in its retail rates over approximately this same time period. KCP&L requests the Commission to authorize a \$1,666,357 regulatory liability for this legal fee reimbursement, with the liability to be amortized over three years beginning with the date of new rates in this rate case.

CS-116 RENEWABLE ENERGY STANDARD COSTS

Please explain adjustment CS-116.

1

2

3

4

5

6

7

8

9

18

Q:

- We have annualized solar rebate and renewable energy credit tracking costs expected to be incurred as a result of compliance with section 393.1030.1, RSMo. Company witness

 Tim Rush discusses this cost in his direct testimony in this case.
- 13 Q: How were the annualizations determined?
- 14 A: Costs were annualized based on budgeted 2011 costs, since that will be the first full year
 15 these costs will be incurred. Budgeted rebate cost was based on projected participation
 16 levels and the rebate rates specified in the statute. Budgeted tracking cost was based on
 17 projected system fees and renewable energy credits earned.

CS-12, CS-120 and CS-123 DEPRECIATION

- 19 Q: Please explain adjustment CS-12.
- 20 A: This adjustment is necessary to adjust financial test year book depreciation and amortization expense to a Missouri basis using current authorized Missouri depreciation and amortization rates.

1	Q:	Please	explain	adjustment	CS-120.
---	----	--------	---------	------------	---------

on data as of December 31, 2008.

- A: Schedule 5 of Schedule JPW2010-1 is used to calculate annualized depreciation expense,

 by applying jurisdictional depreciation rates to adjusted Plant in Service balances shown

 on Schedule 11 of JPW2010-1. The jurisdictional rates used in the annualization were

 those included in the depreciation study sponsored by Company witness John J. Spanos

 in his direct testimony (Schedule JJS2010-1, Part III, pages 4-8) and are shown on

 Schedule DEPR % of Schedule JPW2010-1. Mr. Spanos's study was performed based
- Q: Does the depreciation study include recommended depreciation rates specific to
 Iatan 2 and have these rates been used for Schedule 5 of Schedule JPW2010-1?
- 11 A: Yes, Mr. Spanos recommended specific latan 2 depreciation rates (Schedule JJS2010-2)

 12 and these rates were used in this case.
- 13 Q: What specific Commission action does the Company request in regard to depreciation expense?
- 15 A: The Company requests that the Commission authorize the use of depreciation rates 16 proposed by Company witness John Spanos and which are shown on Schedule DEPR % 17 of Schedule JPW2010-1.
- 18 Q: Please discuss CS-123.

8

The Model that is used to calculate the Revenue Requirement for rate cases is also used for the annual Surveillance Report, which requires adjustment CS-12. Because the adjustment for annualized depreciation in CS-120 is calculated as a difference from test year amounts, CS-12 and any other previous adjustments to test year amounts must first be reversed. This is done in CS-122.

CS-121 AMORTIZATION

2	Q:	Please	explain	adjustment	CS-121.

Q:

A:

A:

A: We annualized amortization expense applicable to certain plant including computer software, land rights and leasehold improvements, by multiplying December 2009 amortization expense on a Missouri jurisdictional basis by twelve. To this amount was added amortization expense on projected Intangible plant net additions for the period January 2010 through December 2010.

Q: What amortization periods were used to amortize intangible assets?

Computer software, the most significant intangible asset, was amortized on either a five or ten year amortization period, depending on the nature of the asset. Costs of land rights were amortized based on rates by account affirmed in Appendix G of the Regulatory – Plan. Amortization of individual Leasehold Improvements was based on the length of the lease. Accumulated amortization is maintained by each individual intangible asset, other than land rights which are maintained in total by account, and amortization stops when the net book value reaches zero.

KCP&L classifies certain equipment as intangible assets. Why is this and how are these assets amortized?

KCP&L possesses the right to use/operate certain equipment for which it paid but does not retain legal ownership. These rights are classified as intangible assets, but are amortized using the appropriate depreciation rate for similar equipment owned by the Company. For example, communication equipment that KCP&L does not legally own but for which it has a right to use/operate is classified as an intangible asset but is depreciated using the depreciation rate for Account 397, Communication Equipment.

1	Q:	Are the amortization methods described in this section of the testimony and used in
		•

- 2 this rate proceeding consistent with the Company's past practice?
- 3 A: Yes, they are.

13

- 4 Q: What specific Commission action does the Company request in regard to amortization expense?
- KCP&L requests the Commission to approve the continued use of the following methods to amortize Intangible Plant: (i) Computer software- amortize over five or ten years depending on the nature of the asset; (ii) cost of land rights- continue to amortize using the rates affirmed in Appendix G of the Regulatory Plan; (iii) leasehold improvements- amortize over the remaining lease term; and (iv) rights to use equipment that the Company does not own- depreciate using the depreciation rate the Commission authorizes in this rate proceeding for similar equipment owned by the Company.

CS-122 UNRECOVERED RESERVE FOR GENERAL PLANT

- 14 Q: Please explain adjustment CS-122.
- 15 A: Company witness John J. Spanos recommends, and KCP&L supports, an amortization of
 16 the Missouri jurisdictional unrecovered reserve for general plant. In prior years the
 17 Company's general plant depreciation rates have been too low, most notably for
 18 Communications Equipment (FERC plant account 397), and it is necessary to include in
 19 cost of service an amortization of this prior under-recovery.
- Q: Why does the Company believe the depreciation rates for Communications

 Equipment, and to a lesser extent other General Plant accounts, have been too low?
- 22 A: KCP&L's Missouri jurisdictional depreciation rates have not been revised for decades.
- Communication equipment is becoming more and more sophisticated, computer-driven,

1		and subject to technological obsolescence, thereby shortening the life span. As a result,
2		Mr. Spanos recommends reducing the life for account 397 from 39 years to 15 years and
3		increasing the account 397 depreciation rate from the currently authorized rate of 2.50%
4		to 6.67%.
5	Q:	Does the proposed life take into account the prior under-recovery of plant account
6		397?
7	A:	No, account 397 unrecovered reserve for plant will be recovered separately from existing
8		plant, as proposed in adjustment CS-122. As mentioned in Mr. Spanos's testimony, this
9		will allow for a constant level of recovery for both existing plant and unrecovered plant.
10		The new proposed account 397 depreciation rate is based on a "going forward" approach,
11		whereby previous Missouri jurisdictional under-recovery is not incorporated in the new
12		depreciation rates but rather amortized into cost of service over a fixed period of time.
13	Q:	Over what time period is this Missouri jurisdictional under-recovery being
14		amortized?
15	A:	KCP&L recommends a ten-year amortization period, roughly in line with the 8.4 year
16		"composite remaining life" for account 397 shown by Mr. Spanos's Schedule JJS2010-1
17		Part III- 8.
18	Q:	Why is it necessary that this unrecovered reserve on general plant be determined
19		and amortized on a jurisdictional basis?
20	A:	The jurisdictional depreciation rates authorized by each Commission have differed over
21		the past years, resulting in different levels of under-recovery. Separate amortization of
22		each jurisdiction's under-recovery ensures that only the appropriate amount is assigned to
23		a given jurisdiction.

_	D 35 0 1	and the second s	
O:	Does Mr. Spanos have a	ny other recommendation	is regarding general plant?

Yes, Mr. Spanos recommends that the plant accounting practice generally referred to as

"general plant amortization" be implemented. Under this practice, KCP&L would not

track specific units of property for selected general plant accounts. Instead, the Company

would record asset purchases by vintage and retire the entire vintage at the end of the

amortization period. KCP&L supports Mr. Spanos's recommendation and requests the

Commission to authorize the use of this practice.

Q: Does this recommendation affect the current filing in any way other than for depreciation/amortization expense included in cost of service?

Yes. As indicated above, to the extent that "general plant amortization" is authorized for a specific general plant account, KCP&L would retire the entire vintage at the end of the amortization period authorized for that particular account. Based on the amortization periods recommended by Mr. Spanos, certain vintages have already exceeded the associated amortization periods. The rates proposed by Mr. Spanos are based on those vintages that have been retired. Adjustments RB-20 and RB-30, discussed earlier in this testimony, include projected retirements consistent with this expectation.

CS-126 PROPERTY TAXES

18 Q: Please explain adjustment CS-126.

13

14

15

16

17

A:

- A: We annualized the real estate and personal property tax expense and payments-in-lieu-of taxes ("PILOT") for plant in service.
- 21 Q: How was annualized property tax expense determined?
- A: The calculation involves two components: (a) The Company's 2009 property tax expense, which includes plant in service at January 1, 2009; and (b) the Company's 2009

1		property taxes which are capitalized on the Iatan Unit 1 AQCS and Iatan Unit 2
2		construction projects until they are placed in service.
3	Q:	Please explain component (a) of the annualization process.
4	A:	For component (a), the Company used actual 2009 property tax expense, adjusted for a
5		correction of an error, booked in January 2010, that decreased operations and
6		maintenance expense.
7	Q:	Please explain component (b) of the annualization process.
8	A:	The Company included in cost of service property tax paid in 2009 on the Iatan Unit
9		AQCS and Iatan Unit 2 equivalent to the property tax due based on the CWIP balances a
10		January 1, 2009. On a normalized basis, this level of property taxes will be expensed, a
11		a minimum, rather than capitalized, following each unit's in service date.
12	Q:	Was the property tax in component (b) part of the Company's 2009 operation and
13		maintenance expense and thus a part of component (a)?
14	A:	No, the property tax in component (b) was part of the Company's total 2009 property
15		taxes to be capitalized and is not included in component (a). Property tax attributable to
16		the Iatan Unit 1 AQCS was expensed beginning April 19, 2009, the in-service date; and
17		such expensed tax is not included in component (b). Property tax attributable to the latar
18		Unit 2 will be expensed once the unit is placed in service in late 2010.
19	Q:	Is the annualized property tax on the Iatan Unit 1 AQCS and Iatan Unit 2, when
20		placed in service, expected to exceed the actual 2009 property tax as reflected in
21		component (b)?

Yes, the 2009 property tax amount in component (b) is based on actual construction work

in progress investment as of January 1, 2009 which is considerably less than the

22

23

1		anticipated plant balance for these projects that will be placed in service prior to the
2		effective date of new rates.
3	Q:	Do the various components of the real estate and personal property tax adjustment
4		discussed above take into effect tax amounts allocated to capital, vehicles, and non-
5		utility plant?
6	A:	Yes, other than component (b) as explained above.
7	Q:	Please explain the PILOT adjustment.
8	A:	The Company placed in service in 2006 a wind generating facility located in Ford
9		County, Kansas. Pursuant to K.S.A. 79-201 Eleventh, such property is exempt from real
10		and personal property taxes.
11	Q:	Does Kansas law provide for a PILOT on property that is exempt from property
12		taxes?
13	A:	Yes, pursuant to K.S.A. 12-147, taxing subdivisions of the state of Kansas are authorized
14		and empowered to enter into contracts for a PILOT with the owners of property that are
15		exempt from ad valorem taxes.
16	Q:	Please explain the PILOT agreements relating to the wind generating facility
17		located in Ford County, Kansas.
18	A:	Separate agreements exist with Ford County and USD #381 that provide for 30 annual
19		payments commencing in 2007, with such payments escalating between 2.5% and 3% per
20		year. These payments were necessary to secure agreements with landowners and
21		community leaders to site the wind facility.
22	Q:	Does that conclude your testimony?
23	A:	Yes, it does.

BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF MISSOURI

In the Matter of the Application of Kansas City Power & Light Company to Modify Its Tariffs to Continue the Implementation of Its Regulatory Plan) Docket No. ER-2010
AFFIDAVIT OF JOHN P. WEISENSEE
STATE OF MISSOURI)
) ss COUNTY OF JACKSON)
John P. Weisensee, being first duly sworn on his oath, states:
1. My name is John P. Weisensee. I work in Kansas City, Missouri, and I am
employed by Kansas City Power & Light Company as Regulatory Affairs Manager.
2. Attached hereto and made a part hereof for all purposes is my Direct Testimony
on behalf of Kansas City Power & Light Company consisting of Seventy - Six (76)
pages, having been prepared in written form for introduction into evidence in the above-
captioned docket.
3. I have knowledge of the matters set forth therein. I hereby swear and affirm that
my answers contained in the attached testimony to the questions therein propounded, including
any attachments thereto, are true and accurate to the best of my knowledge, information and
Subscribed and sworn before me this 28th day of May 2010
Subscribed and sworn before me this day of May, 2010. Micol A. Wey

Kansas City Power & Light Company Narrative Description of Allocators

NET ELECTRIC OPERATING INCOME

Revenues

Retail revenues are the revenues received from retail customers in Missouri and Kansas. Retail revenues are not allocated; rather, they are recorded by jurisdiction.

Miscellaneous revenues include forfeited discounts, miscellaneous services, rent from electric property, transmission service for others, and other electric revenues. These miscellaneous revenues are subdivided and, where possible, assigned directly to the jurisdiction where they are recorded. The miscellaneous revenues that are not directly assignable to a jurisdiction are grouped by functional categories and allocated on a basis consistent with that functional category.

Non-firm off-system sales margin is allocated based on the Production Plant allocator, a calculated allocator based on the allocations for the various plant functional categories.

The capacity and fixed cost components of firm bulk sales revenue are allocated based on the Demand allocator. The energy cost component is allocated based on the Energy allocator.

Sales for resale revenue is revenue from the full-requirements firm wholesale customers under FERC jurisdiction. This revenue is assigned totally to the FERC jurisdiction.

Fuel & Purchased Power Cost

Fuel cost is allocated based on the Energy allocator.

The purchased power demand (capacity) component is allocated based on the Demand allocator, while the energy component is allocated based on the Energy allocator.

Other Operating and Maintenance ("O&M") Costs

Other production O&M cost is allocated consistent with the allocations of the respective plant functional categories.

Transmission O&M cost is allocated consistent with the allocation of transmission plant.

Distribution O&M cost is allocated consistent with the allocation of distribution plant.

Customer accounts expense is primarily allocated using the Customer allocator. The exception is that the uncollectible accounts expenses are directly assigned to the jurisdiction of their origin.

Customer services and information expense is primarily allocated using the Customer allocator. The exception is that the amortizations of Demand Response, Efficiency and Affordability Programs are directly assigned to the jurisdiction of their origin.

Sales expense is primarily allocated using the Customer allocator.

A&G expense is allocated using a number of methods depending on the cause of the cost. Salaries, employee benefits, and injuries and damages expenses are allocated based on the allocated sum of the labor portion of the production, transmission, distribution, customer accounts, customer services and information, and sales expenses described previously. Regulatory expenses are directly assigned to the jurisdiction of their origin, with the exception of the FERC regulatory expenses, which are allocated based on the Energy allocator. Amortization of other jurisdictional costs deferred as a result of prior regulatory orders are assigned directly to the applicable jurisdiction. Property insurance expense is allocated based on the allocation of total plant. General plant maintenance and fleet expenses are allocated based on the allocation of the plant with which they are associated. General advertising expense is allocated using the Customer allocator. The remaining A&G expenses are allocated using the Energy allocator.

Depreciation and Amortization Expenses

Depreciation and amortization expenses are allocated based on the allocation of the plant with which they are associated.

Interest on Customer Deposits

Interest on customer deposits is directly assigned to the jurisdiction of its origin.

Taxes

Property tax related to Wolf Creek is allocated based on the allocation of Wolf Creek plant. Property tax not related to Wolf Creek is allocated based on the allocation of total plant excluding Wolf Creek. Payroll tax related to Wolf Creek payroll is allocated based on the allocation of the Wolf Creek payroll. Payroll tax related to non-Wolf Creek payroll is allocated based on the allocation of the non-Wolf Creek payroll. Gross receipts tax is assigned directly to the Missouri jurisdiction and then eliminated through an adjustment (R-1). Capital stock tax is allocated based on the allocation of total plant.

Currently payable income tax is not allocated. Instead, currently payable income tax is calculated in the Revenue Requirement Model using the statutory tax rates for the appropriate jurisdiction and applying those rates to jurisdictional taxable income calculated in the Revenue Requirement Model. Deferred tax expense related to depreciation is calculated using the statutory federal and state tax rates for the appropriate jurisdiction and applying a composite tax rate to the jurisdictional difference between tax return depreciation and tax basis straight line depreciation reflected in the Revenue Requirement Model. Other deferred income tax expenses are primarily allocated based on the allocation of the plant with which they are associated. Kansas City, Missouri Earnings Tax applies only to the Missouri jurisdiction and is therefore assigned to Missouri.

RATE BASE

Plant-in-Service and Reserve for Depreciation and Amortization

The Demand allocator is used to allocate production plant. An exception is for plant items that have been afforded different jurisdictional accounting treatment through past commission orders. An example is the Missouri gross-up accounting treatment of allowance for funds used during construction ("Missouri Gross AFDC"). These items are directly assigned to the jurisdiction of their origin.

Transmission plant cost is allocated based primarily using the Demand allocator. Missouri Gross AFDC amounts in the transmission plant amounts are allocated directly to Missouri. In addition, there are some costs included in the transmission plant amounts that have been reclassified as distribution assets in accordance with Attachment AI of the Southwest Power Pool's Open Access Transmission Tariff. These amounts are assigned based on their physical location.

Distribution plant cost is assigned based on physical location.

General plant cost is allocated based on the composite allocation of production, transmission, and distribution plant, except for transportation equipment, power operated equipment and communications equipment that are allocated based on transmission and distribution plant.

Intangible plant consists primarily of capitalized software, which is allocated based on the allocation factor considered most appropriate for the function of the software. For example, the customer information system is allocated based on the Customer allocation factor, whereas transmission-related software is allocated consistent with the allocation of Transmission plant.

The reserves for accumulated depreciation and amortization are allocated based on the allocation of the plant with which they are associated.

Working Capital

Cash working capital ("CWC") is not allocated. Instead, the CWC amounts are calculated in the Revenue Requirement Model by taking the net CWC factors and applying these factors to other allocated amounts in the Revenue Requirement Model. Fuel inventory is allocated using the Energy allocator except for the Missouri Gross AFDC amounts in fuel inventory that are assigned directly to Missouri. Materials and supplies ("M&S") and prepayments are grouped by function and allocated based on allocations appropriate for the function of the M&S and prepayments.

Regulatory assets

Regulatory assets and liabilities are assigned directly to the jurisdiction of their origin.

Accumulated Reserve for Deferred Taxes

The reserve is primarily allocated based on the allocation of plant with which it is associated. However, deferred tax reserve amounts that are associated with regulatory assets and liabilities are assigned directly to their jurisdiction of origin.

Customer Advances for Construction and the Customer Deposits

The customer advances for construction and the customer deposits are assigned directly to the jurisdiction of their origin.
