WEATHER EQUALIZATION REVENUE ADJUSTMENT RIDER

Purpose:

The purpose of the Weather Equalization Revenue Adjustment (WERA) is to adjust monthly sales revenues so as to acknowledge actual heating degree day deviations from the 30 year normal weather measurements as provided by NOAA.

Applicability:

The WERA is applicable to all sales customer classes and will be calculated for monthly billings during September through May.

Billing Period Calculations:

(1) Temperature Sensitive Revenues (TSR) - For each sales customer class, the monthly temperature sensitive nonPGA commodity-based revenue will be identified by subtracting the product of that month's customer count and the average nonweather-related monthly usage per customer from total nonPGA commodity-based revenue. See the nonweather-related monthly usage per customer below.

Monthly Mcf's per customer

Residential	0.8521
Commercial	2.3206
Large volume	13.4030

(2) Weather Equalization Factor (WEF) – The monthly weather equalization factor is calculated by subtracting 1.00 from the quotient of the 30 year normal heating degree days for the billing period divided by the actual heating degree days for that billing period.
