Issues : Provision of COS

Witness : David Jones

Type of Ex.: Surrebuttal Testimony Sponsor: The Mid-Missouri Group

Case No. : TW-97-333

- 1 Q. Please state your name and address.
- A. David L. Jones, P.O.Box 38, 215 Roe, Pilot Grove,

  Missouri, 65276.
- Q. On whose behalf do you present this testimony?
- A. The Mid Missouri Group of local exchange companies, as individually identified in their application to intervene.
- 8 Q. What is your current position?
- 9 A. I am currently Executive Vice President of the Mid10 Missouri Telephone Company, and have held that position
  11 since 1985.
- Q. Have you submitted earlier testimony in this docket ?
- 13 A. Yes, I have submitted direct and rebuttal testimony in
  14 this docket, as well as testimony in the intraLATA
  15 presubscription dockets of GTE and Sprint/United on this
  16 subject matter.
- Q. What topics do you wish to address in this surrebuttal testimony?
- 19 A. I would like to address the scope of new proposals in 20 comparison to the Commission's straw proposal

establishing this docket, Staff's proposal to simply eliminate COS, the retention of 2 way COS, the proper context and significance of SWB's financial criticisms of COS, internet access, OPC's proposal for a "2 way local COS with ORP and a new access structure", and finally OPC's suggestions that exchange boundaries should be ignored.

- Q. Do you believe the scope of this docket has been broadened in the rebuttal testimony?
- A. Yes. Staff is advocating complete elimination of COS.

  OPC is advocating retention of 2 way COS as a local offering of the SC with a new "access" rate. SWB is advocating 1 way reciprocal COS as a local offering of the SC with a new "access" rate.

Each of these proposals has the prospect of adverse financial effect on SCs. Each of these proposals, if accepted in this docket, would have adverse ramifications to the SC interests in the PTC Plan docket. As the PTC Plan docket is only now at the beginning of its data acquisition phase, we are concerned that that docket may

be predetermined by any such restructuring of COS in this docket.

1

There is a relationship between COS and the PTC Plan. PTC MTS toll traffic was converted by the Commission into PTC COS toll traffic. Although COS is part of all PTC toll traffic, I believe the scope of this docket is better confined to the straw proposal establishing this docket: one-way reciprocal COS with retention of the existing toll classification and intercompany compensation mechanism.

Since this docket was initiated, a schedule in another docket has been established to specifically address the PTC Plan. In that docket the PTCs have raised the issues that SWB raises here. These issues, such as the carrier of last resort obligations, toll responsibility for SC exchanges, and replacing existing exchange access compensation with a terminating compensation or originating responsibility plan, are better considered in that docket.

To attempt to resolve PTC Plan issues within the

time constraints of this docket would not lend itself to thorough and careful resolution of those issues. The issues and data which will have to be analyzed for the PTC Plan docket are massive. In this docket, SWB has refused our requests for data pertinent to PTC Plan issues.

- Q. Why have you been such a supporter of retaining 2 way COS calling?
- A. We agree with OPC that "...COS provides a measure to equalize rural and urban communities in the value of service of both areas have convenient and affordable access to their community of interest".

Those Mid Missouri Group companies with COS would like to preserve 2 way COS from the standpoint of benefitting our customers. The return calling generated by 2 way COS does not increase our access revenues, so it is not in the companies' financial self interest to promote 2 way over 1 way COS.

Although SWB indicates some companies may be compensated on an actual terminating basis, I do not

believe any of the Mid Missouri Group companies are. In fact in the past SWB has opposed converting any SC from terminating access ratios to actuals until done for all SCs, which has not occurred.

I personally do not believe that competition will produce a service that can substitute, in value or functionality, for the 2 way feature of COS. Competitive services usually do not include the return calling capabilities of 2 way COS. Competitors have not been interested in providing their best offerings to rural residential markets, only to large volume businesses.

In the interLATA market, experience has shown that IXCs do not offer to rural exchanges their best calling plans available in the cities. This is done through the use of different carrier identifications codes (CIC codes). In order to offer different services in different areas of the same state, IXCs have obtained multiple eligible CIC codes for use at the time of entering an exchange. When they enter rural markets they use different CIC codes than they use elsewhere. The

codes selected in rural exchanges precludes subscription to that IXCs best calling plans.

To me this demonstrates that even large carriers—the ones with the ability and responsibility to offer statewide services at geographically averaged rates as required by state and federal law to promote universal service—will avoid doing so if they can. Even if competition develops plans which are suitable replacements for COS, there must be assurances they will be available in rural exchanges before competition is viewed as an effective substitute for COS.

- Q. After reviewing the testimony in this docket, do you remain steadfast in supporting retention of two way COS service?
- A. Yes. However I recognize that there must be a viable method of provisioning the return call. Although I am not in a position to directly refute SWB testimony regarding the unavailability of 800\888 numbers, I do not believe the 800/888 number availability topic has been completely considered. I urge the Commission to explore

its availability in more depth. Missouri may be able to obtain a block of numbers from the Administrator for this purpose, without depleting any company's allotment.

- Q. Have you reviewed the information contained in Mr. Schoonmaker's testimony concerning the take rate for COS?
- A. Yes, and I was somewhat surprised at the overall take rates. I personally believed them to be higher.

The Commission may be encouraged by other parties to consider the retention of COS as relatively insignificant in that only 17,600 access lines in the state currently subscribe to the service. I would urge the Commission to remember that COS was one of three services, besides traditional EAS, ultimately designed to satisfy expanded calling desires. Hundreds of thousands of customers obtained MCA and OCA service at the same time COS was made available.

SWB suggests that little adverse customer reaction could be expected if COS were eliminated or modified.

See page 6, lines 4-8 the rebuttal testimony of SWB witness Bouerneuff. This is an attempt to compare two

very different situations. When the 30,000 metropolitan COS customers had the service eliminated, it was replaced by MCA. There was little reason to complain. This does not suggest that, if present rural COS subscribers lose their present service, there will not be substantial customer reaction.

SWB is not proposing to replace rural COS with a comparable service, as was done for urban subscribers 4-5 years ago. This is not consistent with the policy of promoting comparable services at comparable prices in both rural and urban areas.

I don't believe it is fair now merely to compare the number of access lines subscribed to COS to the total access lines in the state, and therefore conclude the service is insignificant in value.

- Q. Do you agree with Staff witness Gay Smith that COS should either be terminated, or allowed to gradually be phased out ?
- A. I understand the logical line of thought that results in the conclusion that mandated, non-cost based optional

calling plans such as COS should not exist in a competitive environment. Having participated in the establishment of the service, I cannot bring myself politically to support elimination of the service.

I am not sure my customers will accept the "benefits of competition" as an adequate tradeoff for the loss of COS. I agree with OPC that once effective competition develops a viable replacement in a given route, that COS could be phased out. If the Commission does eliminate expanded calling services, they should remind consumers that this is a direct result of the federal and state legislation their elected officials have enacted.

- Q. SWB makes the case it is unfair to require SWB to continue to offer COS because it is experiencing a financial loss on the service. Do you believe the information SWB has supplied in this regard is adequate?
- A. No. SWB merely points out the extent by which COS revenue is exceeded by access charges for COS routes involving rural, high cost SC exchanges. In my opinion all statewide toll traffic in all exchanges is the

correct context in which to evaluate the financial performance of PTC toll services. Individual SC routes were producing losses when MTS only was available. It was expected that this would continue for individual COS routes. As I mentioned in my rebuttal testimony, it was and is expected that individual route analysis will produce varying results. In order to determine whether any PTC is losing money on toll services, all toll revenues and expenses must be reviewed.

I further believe that SWB's attempt to use this individual route analysis to persuade this Commission to place the responsibility for COS on SCs is at odds with the federal Telecommunications Act of 1996. § 254 (b) sets forth the specific goal of access to advanced informational and telecommunications services in all regions of the nation, specifically rural, insular, high cost areas. § 392.185 RSMo established similar state goals.

In order to assure this goal, the TCA retains the requirement of IXCs to geographically average their

rates. Specifically § 254 (g) requires IXC rates to be at rates no higher in one state than in another. § 392.200.4 RSMo retains geographical averaging as a state policy.

This requirement that large carriers with nationwide or statewide markets geographically average its rates for the entire state or nation is the single most important factor in keeping rural toll rates reasonable. I would encourage the Commission to remember that, based upon the 1996 Missouri Telephone Association Directory, SCs serve about 150,000 of the 3,500,000 access lines in Missouri. SCs serve less populous exchanges with smaller volumes of traffic. SCs will never have the same or similar power of geographic averaging that PTCs and the larger IXCs have today. Shifting the responsibility of toll from PTCs to SCs will necessarily result in pressure for higher rural rates.

Q. OPC has proposed that 2 way COS be retained as a local service, offered by the SC owning the petitioning exchange, that the SC utilize ORP in paying for transport

and termination of the traffic, that a new terminating access rate be designed for this traffic, and that the costs qualify for MoUSF support. What observations do you have with respect to this proposal?

First, if there is no viable method of provisioning 2 way Α. COS service, it cannot be provisioned, regardless of service provider, classification, and compensation If 2 way COS cannot be provisioned by the PTCs in a competitive environment, SCs cannot provision it Second, COS is not a local service, it is interexchange. COS traffic once was MTS traffic, and it still traverses the same interexchange or toll facilites. Creation of a new access charge, with all elements except CCL, also creates many issues. Why should a cheaper rate apply to COS traffic than full access rates which apply to other interexchange traffic. The traffic would be indistiquishable in character, and IXCs may well claim discrimination. Also it is unclear whether COS can legitimately be deemed an "essential local service" for Missouri Universal Service Fund purposes. As provided

today, it is an optional toll calling plan. Subscribers may consider it very essential. The essential or basic service for these calls is MTS toll, not COS.

Finally, such a proposal cannot be implemented without extensive changes to the existing administrative and carrier billing systems.

- Q. OPC also has testified or implied that the Commission should ignore exchange boundaries in making decisions in this docket. Do you support that concept ?
- A. Absolutely not. Historically, we were confined to our exchanges because they were the areas the large companies chose not to serve. For the history of regulation, exchange boundaries have been the basis of our obligation to serve, and hence boundaries determine our costs of service. We have not been allowed to cross boundaries for some purposes, and other providers are not allowed into our exchange for certain purposes.

SCs generally serve the rural areas AT&T was historically unwilling to serve. In order to assure interexchange or long distance service was available in

SC exchanges, their local facilities were connected to the interexchange facilities of AT&T. Upon divestiture and break up of AT&T, SWB obtained AT&Ts intraLATA toll facilities. MTS and COS calls still must ride these interexchange facilites.

Although the significance of exchange boundaries may be eroding in the competitive environment, for cost of service, rate of return regulation, and for universal service support exchange boundaries remain a cornerstone upon which telecommunications regulation is based.

The MMG companies which have petitioning COS exchanges do not provide COS service. These companies do not and have not professed to provide COS, and have not and do not profess to provide any services to or in the COS target exchange. These companies are not in the business of providing intraLATA interexchange service. These companies only provide exchange access service to the interexchange carriers providing interexchange service.

Q. Do you believe that the internet access issue is truly a

# SURREBUTAL TESTIMONY OF DAVID JONES ON BEHALF OF THE MID-MISSOURI GROUP CASE NO. TR-97-333

financial issue in this docket ?

A. I believe this issue is being used by SWB to attempt to create an advantage for itself in the PTC Plan docket. The SCs that provide internet access did this for public service reasons. When Mid Missouri began providing internet access within our exhange areas, neighboring community leaders and other public officials began requesting us to exend the service availability to their communities. At that time there were no other local providers.

Generally internet access is not a profit center for the involved SCs. Nor does internet access create a money losing issue for SWB. All SCs provisioning internet access are paid terminating access on the basis of T/O ratios. Because internet access is being provisioned almost completely by return calls to the petitioning exchange, there is no originating access generated.

Contrary to the testimony of SWB's Richard Taylor, none of the SCs in the Mid Missouri Group are paid on the

basis of actual terminating minutes. I am unaware of any SC which is being paid actual termination for this traffic. In the past SWB has refused to consent to any individual SC converting from termating access ratios to actual terminating minutes of use until all SCs are converted from ratios to actuals. SWB's access expense therefore is not affected, as it pays only on the basis of originating COS calls.

- Q. Has SWB's position on resale of services been consistent in all dockets in which the topic has arisen?
- A. No. It is interesting to consider what services are and will be subject to resale after enactment of the 1996 Telecommunications Act. SWB assumes that its tariff prohibition against resale of COS remains in full force and effect. However, SWB advocated in Interconnection Agreement docket TO-94-440 that similar MCA tariff resale restrictions were overridden by § 251 of the TCA, and MCA is now being resold.

SWB also agreed not to restrict resale of Designated Number service. GTE indicates at page 2 of Mary

Kahnert's rebuttal testimony that it must resell its expanded calling services. It makes little sense to me for SWB's COS to be the only service prohibited from resale, when other PTCs resell COS, and when more powerful interexchange services such as MCA and Designated Number are resold.

- Does this conclude your surrebuttal testimony ? Q.
- Α. Yes. 8
