Subject: FW: FYI on propane bottles

A friend of mine forwarded the following article to me which I thought you might find interesting. Just another reason, propane sales should be regulated by someone! Might be well to share this with others...

Randal T. Maffett

1001 Fannin, Suite 550
Houston, TX 77002

Propane Cylinders

Meth cooks are getting the propane tanks from the exchanges at Wal-Mart, Kroger, gas stations, etc. and emptying them of the propane. They are filling them with anhydrous ammonia (which is used in their meth recipe). After they are finished with them, they return them to the store.

They are then refilled with propane and sent back for you and me to buy.

Anhydrous ammonia is very corrosive and weakens the structure of the tank. It can be extremely dangerous when mixed with propane and hooked up to our grills, etc.

You should inspect the propane tank for any blue or greenish residue around the valve areas. If it is present, refuse to purchase that one.' If you suspect you already have one of these tanks, don't touch it. Notify the fire dept, DEA, or Haz Mat Emergency Response Unit immediately for disposition.

Check out the following website for more details. They also have pictures showing what contaminated tank valve might look like.
