Percentage of Installations Completed Within the Customer Requested Due Date

Definition:

Percentage of interconnection trunks completed within the customer requested due date, where the requested customer requested due date is greater than or equal to 20 days or if expedited (accepted or not accepted) the date agreed to by SWBT.

Exclusions:

CLEC Caused Misses

Business Rules:

SWBT will compare the completion date to the customer desired due date, where the requested customer requested due date is greater than or equal to 20 days or if expedited (accepted or not accepted) the date agreed to by SWBT to determine the count of missed installations. The completion date is the date the work is completed and accepted by the CLEC. The measurement is taken for all circuits that complete in the reporting period. Interconnection trunks are selected based on a specific service code off of the circuit ID. Unsolicited FOCs will not be acknowledged in calculating due dates. (i.e., if an unsolicited FOC is received by CLEC, the due date on the first FOC will still be used as the due date. Orders that are completed more than 30 days after the customer requested due date and reported as held orders under PM 73.1 also are included in reporting this measure.

Percentage Missed Collocation Due Dates

Definition:

The percentage of SWBT caused missed due dates for collocation projects.

Exclusions:

None

Business Rules:

The clock starts when SWBT receives, in compliance with the approved tariff, payment and return of proposed layout for space as specified in the application form from the CLEC and the clock stops when the CLEC receives notice in writing or other method agreed to by the parties that the collocation arrangement is complete and ready for CLEC occupancy. The CLEC will then have 5 business days to accept or not accept the collocation space. If the CLEC does not accept the collocation space because the space is not complete and ready for occupancy as specified, and notifies SWBT of such within 5 business days, the collocation will be considered not complete and the time frame required for the CLEC to reject the collocation space (up to 5 business days) and any additional time required for SWBT to complete the space per the specifications will be counted as part of the interval. Any time exceeding the 5 business days will not be counted as part of the interval. Due Date Extensions will be extended when mutually agreed to by SWBT and the CLEC, or when a CLEC fails to complete work items for which they are responsible in the allotted time frame. The extended due date will be calculated by adding to the original due date the number of calendar days that the CLEC was late in performing said work items. Work items include but are not limited to:

- CLEC return to SWBT corrected and complete floor plan drawings.
- CLEC placement of required component(s).

The percentage of DA database updates completed within 72 hours of receipt of the update from the CLEC for directory change only and within 72 hours of the completion date on the provisioning service order where a provisioning order is required.	
Exclusions:	
Excludes Weekends and Holidays.	
Business Rules:	
The date and time stamp on fax updates starts the clock and the date and time when the listing is updated stops the clock. For directory changes that also have a provisioning order, the clock starts when the provisioning order completes and ends when the listing is updated. The update clerks work hours are 6:30 a.m. to 3:00 p.m. Monday through Friday. On requests received after 3:00 p.m. the clock will start at 6:30 a.m. the following day.	
Levels of Disaggregation:	
None	
Calculation:	**Report Structure:**
(Count of updates completed within 72 hours ÷ total updates) * 100	Reported by CLEC and all CLECs for facility based providers.
Measurement Type:	
Tier 1 – Low Tier 2 – None	
Benchmark:	
95% updated within 72 hours. Critical z-value does not apply.

Average Update Interval for DA Database for Facility Based CLECs	
Definition:	
The average update interval for DA database changes for facility based CLECs.	
Exclusions:	
None	
Business Rules:	
See Measurement No. 110	
Levels of Disaggregation:	
None	
Calculation:	**Report Structure:**
Σ (8:00 a.m. of the day following the input into the LSS database – Time update received from CLEC) ÷ total updates	Reported by CLEC and all CLECs for facility based providers.
Measurement Type:	
Tier 1 – Low Tier 2 – None	
Benchmark:	
36 Hours. The critical z-test does apply. This benchmark will be re-evaluated in 6 months.	

112. Measurement	
Percentage DA Database Accuracy For Manual Updates	
Definition:	
The percentage of DA records that were updated by SWBT in error. The data required to calculate this measurement will be provided by the CLEC. The CLEC will provide the number of records transmitted and the errors found. SWBT will verify the records determined to be in error to validate that the records were input by SWBT incorrectly.	
Exclusions:	
None	
Business Rules:	
See Measurement No. 110	
Levels of Disaggregation:	
None	
Calculation:	**Report Structure:**
(Number of SWBT caused update errors ÷ Total number of updates) *100	Reported by CLEC and all CLECs for facility based providers.
Measurement Type:	
Tier 1 – Low Tier 2 – None	
Benchmark:	
97% Critical z-value does not apply.	

113. Measurement	
Percentage of Electronic Updates that Flow Through the DSR process Without Manual Intervention	
Definition:	
Percentage of DSRs from entry to distribution that progress through SWBT ordering systems to ALPS/LIRA.	
Exclusions:	
Rejected DSRs due to CLEC error.	
Business Rules:	
The number of DSRs, that flow through SWBT's ordering systems and are passed to ALPS/LIRA without manual intervention, divided by the total number of DSRs issued within the reporting period.	
Levels of Disaggregation:	
None	
Calculation:	**Report Structure:**
(Number of DSRs that flow through to ALPS/LIRA ÷ Total DSRs) * 100	CLEC and All CLECs.
Measurement Type:	
Tier 1 – Low Tier 2 – None	
Benchmark:	
97% Critical z-value applies.	

COORDINATED CONVERSIONS

114. Measurement	
Percentage of Premature Disconnects for CHC/FDT LNP with Loop Lines.	
Definition:	
Percentage of CHC/FDT LNP with Loop Lines where SWBT disconnects the customer (e.g. switch translations and/or the cross connect is removed) prior to the scheduled start time.	
Exclusions:	
• CHC/FDT LNP with Loop Lines where the CLEC requests that the cut-over begin prior to the scheduled time. • Change of the Due Date by the CLEC less than four business hours prior to the scheduled Date/Time	
Business Rules:	
A premature disconnect occurs any time SWBT begins the cut-over more than 10 minutes prior to the scheduled start time.	
Levels of Disaggregation:	
• Coordinated Hot Cuts (CHC) – LNP with Loop • Frame Due Time (FDT) – LNP with Loop	
Calculation:	**Report Structure:**
(Count of prematurely disconnected CHC/FDT LNP with Loop Lines ÷ total CHC/FDT LNP with Loop Lines) * 100	Reported by CLEC and all CLECs.
Measurement Type:	
Tier 1 – High Tier 2 – High	
Benchmark:	
≤2% premature disconnects Critical z-value does not apply.	

114.1 Measurement (Complete Revision)	
CHC/FDT LNP with Loop Provisioning Interval.	
Definition:	
The % of CHC/FDT LNP with Loop Lines completed by SWBT within the established provisioning intervals.	
Exclusions:	
• CHC/FDT LNP with Loop with greater than 24 loops (including multiple LSRs totaling 25 or more lines to the same customer premise on the due date). • CLEC caused delays (e.g., no dial tone from CLEC: CLEC translations) that do not allow SWBT the opportunity to complete CHC/FDT LNP with Loop within the designated interval. • IDLC (pair gain systems) identified on or before the due date.	
Business Rules:	
The start time is at the direction of the CLEC and based on a negotiated and scheduled time for coordinated hot cut orders (CHC) and on the frame due time for frame due time (FDT). For CHC orders, the clock starts when the CLEC calls the SWBT LOC to start the conversion, and ends when the SWBT technician completes the cross connect to the CLEC facilities and has called the CLEC to notify that the cut-over has been completed. For FDT orders, the clock starts at the frame due time and ends when the SWBT technician completes the cross connect to the CLEC facilities. This measurement only includes Coordinated Hot Cuts and Frame Due Time with 1-24 loops. A conversion with 25 or more lines (including multiple orders totaling 25 or more lines to the same customer premise on the same due date) is considered a project and is negotiated with the CLEC at the time of conversion.	
Levels of Disaggregation:	
CHC LNP with loop • < 10 lines • 10-24 lines FDT LNP with loop • < 10 lines • 10-24 lines	
Calculation:	**Report Structure:**
Total CHC/FDT LNP with Loop Lines within the designated interval ÷ total CHC/FDT LNP with Loop lines.	Reported by CLEC and all CLECs.
