SECTION 5 - DESCRIPTION OF SPECIALIZED COMMUNICATIONS SERVICES

5.1 Frame Relay Service (continued)

5.1.3 Permanent Virtual Circuits

- (A) A PVC is a logical Customer-dedicated communications path defined between two Port connections. Each PVC is assigned a CIR which is the average minimum data rate the network will allocate to the PVC under normal operating conditions. The data transmission rate for a PVC can be greater than the CIR when excess capacity is available on the Port and on the network. When this excess capacity exists, a data rate above the CIR may be achieved up to the Port capacity. Data sent across a virtual connection in excess of that connection's CIR will be marked by the network as being discard eligible (DE) in the event of network congestion and will be delivered only if the instantaneous demand for output on a transmission Channel is equal to or less than the capacity of the queue for that Channel.
- (B) PVCs are duplex (two-way).
- (C) Each PVC is subject to a minimum charge equal to the charge for one month's service.
