TARIFF FORMAT

- A. Sheet Numbering – Page numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the Tariff. When a new sheet is added pages already in effect, a decimal is added. For example, a new sheet added between 14 and 15 would be 14.1
- B. Sheet Revision Numbers – Revisions numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page revision on file with the Commission. For example, the 4th Revised page 14 cancels the 3rd Revised page 14. Because of various suspension periods, deferrals, etc., the Missouri Public Service Commission follows in their tariff approval process, the most current sheet number on file with the Commission is not always the tariff page in effect.
- C. Paragraph Numbering Sequence – there are five levels of paragraph coding. Each level of coding is subservient to its next higher level.

Step 1 - Obtain the "V" and "H" coordinates for the serving wire center of the originating and the destination points.

Step 2 - Obtain the difference between the "V" coordinates of each of the wire centers. Obtain the difference between the "H" coordinates,

Step 3 - Square the differences obtained in Step 2.

Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 - Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.
