1	DIRECT TESTIMONY	
2	OF	
3	STEVE M. TRAXLER	
4	KANSAS CITY POWER & LIGHT COMPANY	
5	CASE NO. ER-2006-0314	
6	Q. What is your name and business address?	
7	A. Steve M. Traxler, Fletcher Daniels State Office Building, Room G 8, 615 E	ast
8	13th Street, Kansas City, Missouri 64106.	
9	Q. By whom are you employed and in what capacity?	
10	A. I am a Regulatory Auditor for the Missouri Public Service Commissi	ion
11	(Commission).	
12	Q. What is your educational background?	
13	A. I graduated from Missouri Valley College at Marshall, Missouri, in 1974 w	ith
14	a Bachelor of Science degree in Business Administration with a major in Accounting.	
15	Q. Please describe your employment history.	
16	A. I was employed as an accountant with Rival Manufacturing Company	in
17	Kansas City from June 1974 to May 1977. I was employed as a Regulatory Auditor with the	the
18	Missouri Public Service Commission from June 1977 to January 1983. I was employed	by
19	United Telephone Company as a Regulatory Accountant from February 1983 to May 198	86.
20	In June 1986, I began my employment with Dittmer, Brosch & Associates (DBA) in Le	e's
21	Summit, Missouri, as a regulatory consultant. I left DBA in April 1988. I was self-employ	/ed
22	from May 1988 to December 1989. I came back to the Commission in December 1989.	Му
23	current position is a Regulatory Auditor V with the Commission's Auditing Department.	

1	Q.	What is the nature of your current duties at the Commission?
2	A.	I am responsible for assisting in the audits and examinations of the books and
3	records of uti	lity companies operating within the state of Missouri.
4	Q.	Have you previously testified before this Commission?
5	A.	Yes, I have. A list of cases in which I have filed testimony is shown on
6	Schedule 1 of	this direct testimony.
7	Q.	Have you filed testimony in rate proceedings involving a regulated utility
8	company in a	ny jurisdictions besides Missouri?
9	A.	Yes, I have also filed testimony in Kansas, Minnesota, Arizona, Indiana, Iowa
10	and Mississip	pi.
11	Q.	To which of the Kansas City Power & Light Co.'s (KCPL) operations are you
12	directing you	r testimony?
13	A.	This testimony addresses the electric operations of KCPL in Missouri.
14	Q.	What are your principal areas of responsibility in Case No. ER-2006-0314?
15	A.	As one of the Regulatory Auditor V's assigned to this case, I have oversight
16	responsibility	regarding areas assigned to other auditors on this case, an Application to
17	increase rates	filed by KCPL. In addition, my direct testimony will address the specific areas
18	listed below:	
19		(1) Income Tax-Straight Line Tax Depreciation
20		(2) Income Tax
21		(3) FAS 87 – Pension Cost
22		(4) FAS 106 - Other Post Retirement Employee Benefit Costs
23		(OPEB)

The current and deferred income tax calculation reflects timing differences which result in a difference between pretax book accounting income and taxable income for IRS purposes. The deferred income tax component must also reflect the amortization of excess deferred taxes resulting from the reduction in the federal tax rate and the amortization of the investment tax credit (ITC) deferred prior to the 1986 Tax Reform Act.

3) Appropriate level of Financial Accounting Standard (FAS) 87 pension cost and related rate base assets to be included in cost of service in this case.

KCPL, the Staff, and other parties to the Stipulation and Agreement in KCPL's experimental regulatory plan docket, Case No. EO-2005-0329, reached an agreement for calculating pension cost under FAS 87 and a tracking mechanism to ensure that KCPL recovers all of its pension cost.

4) Appropriate level of FAS 106 Other Post Retirement Employee Benefits (OPEB) cost to be included in cost of service in this case.

The 2005 test year for FAS 106 cost was replaced by the 2006 cost provided by KCPL's actuarial firm.

Additional amortization requirement under the experimental regulatory plan agreement in Case No. EO-2005-0329. The Signatory Parties agreed to support an additional amortization amount to be added to KCPL's cost of service when the cash flows, resulting from the Commission's traditional cost of service approach, fail to meet the Funds from Operations Interest Coverage ratio and the Funds from

Operations as a Percentage of Average Total Debt ratio. My testimony addresses the Staff's benchmark analysis for these two financial ratios.

Under the terms of the Stipulation and Agreement in KCPL's 6) regulatory plan docket, EO-2005-0329, KCPL agreed that off-system sales revenues and costs will continue to be treated "above the line" for ratemaking purposes. I will address the appropriate level to be included in cost of service in this case, ER 2006-0314.

STRAIGHT LINE TAX DEPRECIATION

- Q. What is the relationship between book depreciation and straight-line tax depreciation?
- A. Annualized book depreciation is a result of multiplying the plant investment at June 30, 2006, the end of the update period established in Case No. EO-2005-0329 for this proceeding, by the book depreciation rates being recommended by Staff witness Rosella L. Schad of the Engineering and Management Services Department. Straight line tax depreciation represents the tax deduction for book depreciation for a regulated utility for ratemaking purposes.

The IRS allows a regulated utility, like all corporations, to use an accelerated depreciation method in calculating its current income tax liability. However, with regard to a regulated utility, Congress intended for the additional cash flow (lower current income tax), resulting from an accelerated depreciation method, to be retained by the utility. As a result, under IRS rules for a regulated utility, the additional deduction resulting from the use of an accelerated depreciation method cannot be reflected in rates. Ratepayers receive the tax deduction for depreciation expense over the same period used for book accounting purposes.

22

21

23

For example, a 10 year book life for recognizing book depreciation is also used to calculate the tax deduction for setting rates – straight line tax depreciation.

Differences between book depreciation and the corresponding tax deduction – straight line tax depreciation, occur as a result of the following:

- 1) The plant cost on the financial books (book basis) includes capitalized costs which were taken as current tax deduction prior to the reform of the 1986 Tax Reform Act and
- The book basis also includes the equity component of 2) Allowance for Funds Under Construction (AFUDC) which is not deductible for tax purposes.

The tax basis of depreciable property is lower than the book basis for a utility primarily for these two reasons. Straight line tax depreciation is calculated by applying the book depreciation rate (10 year life = 10% annual rate) times the tax basis of the property.

- Q. Can you provide an example to illustrate the book basis and tax basis difference and the relationship of book deprecation expense to the IRS tax depreciation and the tax deduction allowed for setting rates for regulated utility, straight line tax depreciation?
- A. Yes. Attached as Schedule 2 attached to this direct testimony is an example to illustrate these relationships.
 - Q. Would you please explain Schedule 2?
- A. Prior to the Tax Reform Act of 1986, interest, pension cost, property taxes and payroll taxes which were capitalized for financial accounting (included in the book basis) were treated as a current year deduction by the IRS. This resulted in a difference between the book basis and tax basis of the asset. Line 3 reflects the book basis of the asset, \$10,000,

1

3 4

5

6

7 8

11

9

12 13

> 15 16

14

17

18

19 20

22

23

21

which includes capitalized interest of \$2,000. The tax basis of the asset of \$8,000 on line 4 reflects that the \$2,000 interest amount, line 2, was allowed as a current year deduction prior to 1986. Since 1986, the interest expense is capitalized for both financial accounting and IRS tax purposes which eliminated the difference between the book basis and tax basis of the asset.

Column A reflects the annual depreciation of the book basis over its 10 year life -\$1,000 / year. Column B reflects the basis difference for interest expense. The IRS allowed the \$2,000 interest expense as a tax deduction in year 1. For financial accounting the interest cost was capitalized and included in the book depreciation in Column A at \$200/year.

Column C reflects the IRS tax depreciation deduction using an accelerated 20% rate (20% X \$8,000), \$1,600/year. At the end of year 5 the asset is fully depreciated for IRS tax purposes - \$2,000 in year 1 for the interest cost and \$1,600/ year in tax depreciation (years 1-5) for a total tax deduction of \$10,000 at the end of year 5.

As stated previously, IRS rules don't allow State regulatory Commissions to reflect the additional depreciation deduction resulting from an accelerated method. For ratemaking purposes, the tax deduction for depreciation cannot be reflected in rates any quicker than the time period used in recognizing book depreciation for financial accounting – 10 years in our The straight line tax depreciation deduction for setting rates is reflected in example. Column D - \$800/year (10% X \$8,000) for 10 years. The ratepayer also received the \$2,000 interest deduction in year 1 for a total deduction of \$10,000 at the end of year 10.

Column E reflects the excess of the IRS tax deduction over the straight line deduction allowed for rates. The \$800 difference results in positive deferred income taxes in years 1-5 (Column G). At the end of year 5, the Accumulated Deferred Tax balance in Column I

19

20

21

22

23

reflects that ratepayers have paid \$1,520 more in rates for income tax than the company's actual tax liability. Beginning in year 6 and continuing through year 10, the ratepayer continues to receive an \$800/year tax deduction for ratemaking purposes. The utility's tax deduction is \$0 for years 6-10 as reflected in Column C. In summary, ratepayers paid \$1,520 more in income tax in years 1-5 than the utility actually paid to the IRS, however, in years 6 – 10, the ratepayers paid \$1,520 less in rates for income tax than the utility's tax liability. This tax "timing difference" has reversed by year 10 as reflected in Column I, for year 10.

- Q. How does the Staff compute the straight line tax deduction?
- A. As reflected on Schedule 2, straight line tax depreciation is calculated by applying the book depreciation rate -10% to the tax basis of the asset -\$8,000 = \$800/year. This result is the same if the tax basis to book basis ratio is applied to book depreciation as follows:

Book Depreciation Expense \$1,000

Tax Basis \$8,000 / Book Basis \$10,000 = 80%

Straight Line Tax Depreciation \$800 per year

This method is used by the Staff to make sure that the straight line tax depreciation deduction, used in a rate case, is tied directly to the "annualized" book deprecation expense reflected in the Staff's cost of service. A historical amount for straight line tax depreciation will not reflect a change in the book deprecation rates being recommended by the Staff or a full year's deduction for plant additions between the end of the test year and the known and measurable update period.

Q. Does an adjustment need to be made to the tax basis prior to calculating straight line tax depreciation for ratemaking purposes?

A. Yes. Retirements for vintage property depreciated under the Asset Depreciation Range (ADR) are not reflected in the tax basis until the entire vintage is fully depreciated. This results in a mismatch between the book basis and tax basis for these assets because the retirements are reflected in the book basis of depreciable property but not in the Reducing the tax basis for ADR retirements eliminates this mismatch for tax basis. calculating the straight line tax depreciation deduction.

- Q. Does the Staff's method for computing straight line tax depreciation result in a corresponding tax deduction for all assets accruing book depreciation for rate recovery?
- A. Yes. The Staff and KCPL use mass asset accounting rules under Federal Energy Regulatory Commission (FERC) Uniform System of Accounts (USOA) for accruing depreciation expense for financial reporting and ratemaking purposes. Under mass asset accounting, individual assets, in a specific account, are not tracked for depreciation purposes. All assets in an account continue to accrue depreciation expense for accounting and ratemaking purposes until the entire account is fully depreciated. The Staff's method for calculating straight line tax depreciation results in a corresponding tax deduction for all assets accruing book depreciation for rate recovery. Ratepayers are entitled to a straight line tax deduction for all book deprecation included in rates.

DEFERRED INCOME TAX AND AMORTIZATIONS

- What does the term, deferred income tax, generally refer to with regard to Q. calculating income tax expense for a regulated utility?
- A. There are "timing differences" between when specific costs are reflected in determining pretax accounting income and when they are reflected in determining current year taxable income for the Internal Revenue Service (IRS). In calculating income tax for

ratemaking purposes, timing differences can be reflected consistent with when they are reflected under IRS rules (flow through treatment) or they can be reflected consistent with when they are reflected in determining pretax income for financial accounting purposes (normalization treatment). When timing differences are normalized for ratemaking purposes, a deferred tax adjustment is used for the purpose of not reflecting the timing of cost recognition under IRS rules. Deferred taxes are reversed in subsequent years (Column E & G, Schedule 2, years 6-10) consistent with the timing for recognizing the related costs for financial reporting purposes in determining pretax operating income. The deferral of the difference between accelerated tax depreciation and straight line tax depreciation in Column E & G of Schedule 2 is an example of normalization treatment for a tax timing difference.

- Q. Is normalization treatment required for using an accelerated depreciation method under IRS rules?
- A. Yes. As previously stated, normalization treatment is required for an accelerated depreciation method for a regulated utility. The tax deduction for depreciation cannot be reflected for ratemaking purposes any quicker that the timing for recognizing book depreciation in rates. The Staff's method for calculating straight line tax depreciation complies with the IRS normalization requirements for a regulated utility. Staff adjustment S-89 reflects the deferred taxes resulting from normalizing the tax timing difference for accelerated tax depreciation.
- Q. You mentioned previously that prior to the 1986 Tax Reform Act, there were tax timing differences for property taxes, interest, payroll taxes and pension cost. How were these timing differences reflected for ratemaking purposes prior to 1986?

- A. Flow through treatment (current year deduction) was used for all Missouri utilities unless the utility could demonstrate the need for additional cash flow to meet interest coverage ratios. It is my understanding that KCPL received normalization treatment in rate cases prior to 1986 based upon a need for additional cash flow during significant construction activity related to new generation facilities.
- Q. How are the normalized timing differences described in your last answer reflected for ratemaking purposes?
- A. Timing differences which were reflected as a tax deduction in the current year, for current income tax to the IRS, were deferred (normalized) for ratemaking purposes. The tax deduction is reflected in rates by amortizing the deferred tax balance over the depreciable life of the property. Staff's income tax calculation for KCPL, in this current case, reflects the amortization of prior timing differences which were normalized in prior rate cases. Adjustment S-94 reflects an annual amortization of deferred taxes resulting from normalization treatment in prior cases.
- Q. Does the Staff's income tax calculation also reflect an amortization of excess deferred taxes resulting from a reduction in the federal tax rate?
- A. Yes. The 1986 Tax Reform Act reduced the federal tax rate for corporations from 46% to 34%. As a result all deferred taxes, previously reflected in rates, based upon an assumed 46% tax rate, were overstated. The IRS allowed a regulated utility to flow back (amortize) the excess deferred taxes over the approximate depreciable book life of the property. The Staff's income tax calculation, for KCPL in this current case, reflects an amortization of excess deferred taxes resulting from the reduction in the federal tax rate in

1986. Adjustment S-90 reflects an annual amortization of the excess deferred taxes resulting from the reduction in the federal tax rate.

3 4

Q. Does the Staff's income tax calculation also reflect an amortization of the investment tax credit?

5

A.

6

7

8

9

10

11 12

13

14

15

16 17

18

19 20

21

22

- Yes. Prior to the 1986 Tax Reform Act, a utility received a permanent tax credit for investing in new capital additions. For ratemaking purposes, the IRS allowed the utility to amortize (flow back to ratepayers) the investment tax credit over the approximate depreciable book life of the related property. Adjustment S-91 reflects an annual amortization of the deferred investment tax credit which was in effect prior to the 1986 Tax Reform Act.
- Q. Is there a recent tax benefit for an electric utility resulting from the American Jobs Creation Act of 2004?
- A. Yes. An additional tax deduction is available for income from qualified production facilities. In response to Staff Data Request No. 434, KCPL indicated that its tax deduction for 2006 is expected to be \$2,531,000. The Staff's income tax calculation for KCPL, in this current case, reflects the Missouri jurisdictional share of the 2006 deduction.

OTHER POST RETIREMENT EMPLOYEE BENEFIT COSTS - FAS 106

- Q. What is Financial Accounting Standard (FAS) 106?
- FAS 106 is the Financial Accounting Standards Board (FASB) approved A. accrual accounting method used for financial statement recognition of annual Other Post-Retirement Employee Benefit (OPEB) costs.
- When was the FAS 106 accrual accounting method for OPEB costs adopted Q. for ratemaking purposes?

6

7

23 24

25

26 27

28

- Α. House Bill 1405 (Section 386.315, RSMo), approved by the Missouri Legislature and signed into law by the Governor in 1994, required the adoption of FAS 106 for setting rates for OPEB costs. In Commission cases following the date that House Bill 1405 became law, the Staff began recommending the use of FAS 106 for determining ratemaking recovery for OPEB costs.
- What method was used for setting rates for OPEB costs before the effective Q. date of Section 386.315, RSMo?
- Prior to the effective date of Section 386,315, RSMo, rates were set on a "pay-A. as-you-go" or "cash" basis for OPEB costs. The utility's actual paid claims for OPEB cost, for current retirees, were included for recovery for ratemaking purposes.
- Q. Does Section 386.315, RSMo, include a funding requirement as a prerequisite for the adoption of FAS 106 for ratemaking purposes?
- A. Yes. The recognition of FAS 106 for ratemaking purposes is conditioned on a requirement that annual FAS 106 costs collected in rates be funded in a separate funding mechanism to be used solely for the payment of OPEB benefit costs to retirees. Paragraph 2 of Section 386.315 addresses the funding requirement:
 - 2. A public utility which uses Financial Accounting Standard 106 shall be required to use an independent external funding mechanism that restricts disbursements only for qualified retiree benefits. In no event shall any funds remaining in such funding mechanism revert to the utility after all qualified benefits have been paid; rather, the funding mechanism shall include terms which require all funds to be used for employee or retiree benefits. This section shall not in any manner be construed to limit the authority of the commission to set rates for any service rendered or to be rendered that are just and reasonable pursuant to sections 392.240, 393.140 and 393.150, RSMo.
- Q. Is KCPL currently in compliance with the funding requirement under Section 386.315, RSMo.?

- A. Yes.
- Q. Please explain Staff adjustments S- 78.7.
 - A. Adjustment S-78.7 adjusts KCPL's 2005 test year costs for FAS 106 to reflect the more current FAS 106 calculation for 2006.

PENSION COST - FAS 87

- Q. What is Financial Accounting Standard (FAS) 87?
- A. FAS 87 is the accrual accounting method for calculating pension cost for financial reporting purposes.
- Q. Did the parties to KCPL's experimental regulatory plan case, Case No. EO-2005-0329, agree to a method under FAS 87 for calculating pension cost for ratemaking purposes?
- A. Yes. Pages 10 15 of the Stipulation and Agreement address the method to be used under FAS 87 for calculating pension cost for ratemaking purposes. The Stipulation and Agreement also provides for a tracking mechanism intended to make KCPL whole when its actual pension cost exceeds the level being recovered in existing rates. Alternatively, if KCPL's pension cost drops below the level being collected in rates, the excess will be tracked and returned to ratepayers beginning in KCPL's next rate case.
- Q. Does the Stipulation and Agreement reached in EO-2005-0329 address rate base recognition of a KCPL prepaid pension asset?
- A. Yes. KCPL, like all major utilities in Missouri, recognized a negative pension cost under FAS 87 as a result of a well-funded pension plan and strong investment performance in the 1990's. Under FAS 87, a prepaid pension asset is recognized when FAS 87 pension cost is less than the cash contributions required under the Employee

Q.

2

Retirement Income Security Act (ERISA) of 1976. The pension cost agreement provides for rate base recognition of a prepaid pension asset of \$ \$34,694,918 (Missouri jurisdictional).

Does the pension cost agreement address rate recovery of the prepaid pension

3

asset?

5

67

8

9

10

11 12

13

1415

16

1718

1920

21

22

23

- A. Yes. The pension cost agreement requires KCPL to fund the FAS 87 cost being collected from ratepayers in rates. FAS 87 pension cost which exceeds the minimum funding requirement under ERISA is being used to pay down the prepaid pension asset. After the prepaid pension asset has been fully amortized in this fashion, KCPL is required to fund its annual FAS 87 cost in the same manner that Section 386.315, RSMo requires for FAS 106 cost collected in rates.
- Q. What is the unrecovered balance of the prepaid pension asset reflected in the Staff's rate base?
- A. The Staff's rate base includes an approximate balance of \$21.4 million on a Missouri jurisdictional basis as of June 30, 2006. This amount will be updated through September 30, 2006 in the true up audit in this case.
- Q. You mentioned previously that the pension settlement agreement tracks the difference between KCPL's actual pension cost under FAS 87 and the amount being collected in rates. How do KCPL's actual FAS 87 costs compare to the level recovered in rates?
- A. The tracking mechanism under the pension cost agreement identified the FAS 87 pension cost included in existing rates to be \$22,000,000 (Total Company). KCPL's actual FAS 87 cost since January 2005 has exceeded the level included in current rates by approximately \$12.7 million (Missouri jurisdictional) through June 30, 2006. This amount will be updated through September 30, 2006 in the true up audit ordered for this case.

level recovered in existing rates? A. Yes. The \$12.7 million excess is recognized as a regulatory asset which is

ratemaking treatment for the \$12.7 million excess of KCPL's actual FAS 87 costs over the

Does the pension cost agreement in Case No. EO-2005-0329 address

- included in rate base and amortized over 5 years. If the reverse were true, a regulatory liability would have been used as an offset to rate base and amortized back to ratepayers over 5 years. The tracking mechanism treats the company and ratepayers in an equal fashion.
 - What is the purpose of adjustment S-78.3? Q
- A. Adjustment S-78.3 adjusts the 2005 test year to reflect the 5 year amortization of the excess of KCPL's actual FAS 87 pension cost over the level recovered in rates since January of 2005.
 - Q. What is the purpose of adjustment S-78.4?
- Adjustment S-78.4 adjusts the 2005 test year pension cost to reflect the 2006 A. level under FAS 87 as calculated by the Company's actuary.

REGULATORY PLAN AMORTIZATION

- What is the experimental regulatory plan amortization addressed in the Q. Stipulation and Agreement in Case No. EO-2005-0329?
- A. The Signatory **Parties** to the Stipulation and Agreement Case No. EO-2005-0329 agreed that it is desirable for KCPL to maintain its debt at investment grade during the period of addressed in the agreement. The Signatory Parties agreed to support additional amortizations to maintain financial ratios:
 - . . . As part of this commitment, the non-KCPL Signatory Parties agree to support the "Additional Amortizations to Maintain Financial

11

27

28

Ratios", as defined in this section and related appendices, in KCPL general rate cases filed prior to June 1, 2010. . . . (page 19)

The Signatory Parties agree to support an additional amortization amount added to KCPL's cost of service in a rate case when the projected cash flows resulting from KCPL's Missouri jurisdictional operations, as determined by the Commission, fail to meet or exceed the Missouri jurisdictional portion of the lower end of the top third of the BBB range shown in Appendix E, for the Funds from Operations Interest Coverage ratio and the Funds from Operations as a Percentage of Average Total Debt ratio. . . . (page 20)

This language requires a determination, in all rate cases between now and 2010, as to whether the cash flows, resulting from the revenue level recommended by the Staff's traditional cost of service, will be sufficient to meet the specified financial ratio range for two specific financial ratios identified in the above paragraph. Appendix F, attached to the Stipulation and Agreement, reflects the adjustment process that the Signatory Parties agreed to use for determining the Missouri jurisdictional amortization levels based upon Staff's recommended revenue level for setting rates in this case.

- Q. Has the Staff performed the analysis to determine whether the annual revenue level recommended by the Staff in its cost of service calculation meets the benchmarks for the two financial ratios specified in the regulatory plan agreement?
- A. Yes. Attached as Schedule 3 to this direct testimony is a copy of Attachment 1 to Appendix F from the Stipulation and Agreement in Case No. EO-2005-0329. The calculation is based upon the Staff's revenue requirement result and additional data supplied by KCPL in response to Staff Data Request Nos. 444 and 444.1.
- What additional data, supplied by KCPL, did you rely on for purposes of Q. completing the financial ratio benchmark analysis?
- A. The two financial ratios, Funds from Operations Interest Coverage and Funds From Operations as a Percentage of Average Total Debt, require additional balance sheet

3

4

5

amounts and an assumed interest cost for each. These are referred to as Off Balance Sheet Obligations. For KCPL, these obligations include purchase power capacity contracts, operating lease agreements and accounts receivable sales. An assumed discount rate is used to determine the present value of these obligations with a corresponding interest cost being considered in the financial ratio calculations.

21 22 Balance Sheet Obligations? Α. In response to Staff Data Request No. 444.1, KCPL provided the necessary Off Balance Sheet Obligations with a discount rate assumption of 10% for Operating Leases and Purchase Power Capacity Contracts. I rejected the 10% discount rate

Did you accept the discount rate assumption provided by KCPL for the Off

Poors for Great Plains Energy (GPE). Standard & Poors indicated that a 6.1% discount rate was used to determine the present value of KCPL's Operating Lease and Purchase Power Capacity Contract obligations. Since Standard & Poors is responsible for the GPE/KCPL

assumption based upon data included in an August 1, 2006, research bulletin from Standard &

credit rating, its recommended discount rate should be given consideration.

- Q. What additional information was provided by KCPL to complete the financial ratio analysis?
- A. The financial ratio analysis also considers short term debt and related interest expense. KCPL provide this data in response to Staff Data Request No. 441.
- Q. Why is it critical that the Staff's revenue requirement determination and supporting cost of service calculation be used to benchmark the financial ratios agreed to in the experimental regulatory plan Stipulation and Agreement?

- A. As a regulated electric utility, KCPL operates in the Kansas retail jurisdiction and the federal wholesale jurisdiction, in addition to operating in the Missouri retail jurisdiction. Also, KCPL is part of a holding company, GPE, which operates an unregulated business enterprise, Strategic Energy, which is an electricity provider in certain deregulated markets. The Stipulation and Agreement in Case No. EO-2005-0329 applies only to the Missouri jurisdiction of KCPL. Missouri ratepayers are not responsible for GPE's failure to meet the financial ratio benchmarks as a result of poor performance by KCPL's regulated Kansas jurisdiction or GPE's unregulated subsidiary, Strategic Energy. The additional amortization, if any, that is applicable from the financial ratio analysis in this proceeding should be based solely upon KCPL's Missouri jurisdictional operations.
- Q. What are the results of the financial ratio benchmark analysis based upon the Staff's recommended revenue requirement resulting from Staff's cost of service determination?
- A. The Staff's revenue requirement determination for KCPL based upon a traditional cost of service approach is an approximate revenue excess/earnings excess of \$80 million based upon results as of June 30, 2006. This result does not consider the additional \$107 million in Missouri jurisdictional plant expected to be in service by the September 30, 2006 true-up date ordered for this case, related depreciation expense and operations and maintenance expense. The amortization resulting from the financial ratio benchmark analysis will change with changes in the Staff's traditional revenue requirement result.

The financial ratio benchmark analysis generates a need for an additional amortization of approximately \$75 million (excluding expected changes through September 30, 2006). It is

recommended rate reduction of \$80 million.

the Staff's position in The Empire District Electric Company rate increase case,

Case No. ER-2006-0315, and in this case that the additional amortization should not be

grossed up for income taxes. For clarification then, assuming no change in the Staff's

\$80 million revenue excess/earnings excess determination, the additional \$75 million

amortization, to meet benchmark financial ratios, would offset all but \$5 million of the Staff's

Thus, in lieu of a rate reduction under traditional ratemaking treatment, ratepayers would receive a \$75 million rate base offset in KCPL's next rate case. This provision for a rate base offset appears throughout the KCPL experimental regulatory plan Stipulation and Agreement in Case No. EO-2005-0329 (see pages 18, 27, 32, 37 and 40 of the Stipulation and Agreement).

- Q. Will the additional revenue requirement associated with plant additions from July through September 2006 reduce the amortization result from the financial ratio benchmark analysis?
- A. Yes. An increase in the revenues/earnings from the traditional cost of service approach reduces the amount of the additional amortization needed to meet the financial ratio benchmarks.
- Q. Does KCPL have an incentive to maximize revenue/earnings received under the traditional cost of service approach?
- A. Yes. Under the Experimental Regulatory Plan Stipulation and Agreement, ratepayers receive a rate base offset for any amortization resulting from the financial ratio benchmark analysis. This lowers KCPL's revenue requirement in future rate cases. Alternatively, if KCPL prevails upon the Commission and obtains rate relief from the

Commission under traditional cost of service ratemaking treatment by the Commission

adopting, for example, KCPL's proposed authorized rate of return and other of KCPL's

revenue requirement proposals, thereby producing a positive, rather than a negative revenue

requirement for KCPL, then the additional amortization mechanism is not activated and

KCPL's rate base would not be reduced in KCPL's next rate case as a result of this rate case.

Thus, KCPL has an incentive to maximize its requested return on equity, for the purpose of

avoiding an amortization, resulting from the financial ratio benchmark analysis.

- Q. You mentioned earlier that your financial ratio benchmark analysis resulted in an additional amortization of \$75 million without consideration of any additional income tax. What are the income tax considerations related to the amortization generated by the credit ratio benchmark analysis?
- A. The Staff considers the additional amortization to be a supplement to depreciation on KCPL's existing plant. A straight line tax depreciation deduction should be reflected consistent with the additional amortization in the Staff's cost of service determination. This treatment is consistent with the ratemaking treatment used for any increase in allowed depreciation expense.
- Q. In fact, has the Staff used a similar "additional amortization" approach in addressing a prior excess earnings /revenue position for KCPL?
- A. Yes. As part of a settlement of an earnings investigation of KCPL in Case No. EO-94-199, KCPL and the Staff agreed to an additional amortization of \$3.5 million annually. In lieu of reducing KCPL's rates by an additional \$3.5 million, KCPL was allowed to book an amortization of \$3.5 million per year. This \$3.5 million amortization has been treated as additional book depreciation with the accumulated balance being reflected as a

reduction to rate base. A corresponding straight line tax depreciation deduction has been assumed in subsequent earnings/revenues investigations of KCPL.

Q. Does the Stipulation and Agreement in Case No. EO-2005-0329 express agreement among the parties as to whether any additional amortization to meet financial ratios should be grossed up for income tax?

A. No. The Stipulation and Agreement addresses this issue on page 21:

... Additional taxes will be added to the amortization to the extent that the Commission finds such taxes to be appropriate ...

This language indicates that the Commission may be required to make a decision on this issue.

- Q. Does the Staff's filed revenue requirement include an estimated revenue requirement impact for plant additions and related costs through September 30, 2006?
- A. Yes. The Staff has included an additional \$20 million in revenue requirement related to expected plant additions and related expenses expected between June 30, 2006, and September 30, 2006.
- Q. Does the financial ratio benchmark analysis discussed in this direct testimony address this estimated \$20 million in revenue requirement for plant additions and related costs through September 30, 2006?
- A. No, it does not. The Experimental Regulatory Plan amortization will be updated for all changes to the Staff's recommended revenue requirement which occur between June 30, 2006, and September 30, 2006.

OFF-SYSTEM SALES

- Q. Has Staff included in this case, the net margin (profit) from off-system sales in the interchange market?
- A. Yes. Staff has determined the level of off-system net margin that KCPL experienced during the 12 months ended December 31, 2005, (the test year used in this case) and included that amount in this case. The net margin includes both the sales revenue and related fuel and purchase power costs for resale.
 - Q. What are off-system sales?
- A. Off-system sales relate to sales of electricity made at times when utilities have met all obligations to serve their native load customers and have excess energy to sell to other utilities. The off-system sale transactions occur between utilities resulting in profits (net margin) to the selling entity, in this case, KCPL.
- Q. What levels of net margin from off-system sales has KCPL experienced over the last several years?
- A. For the period 2001 through 2005 and budget for 2006 and 2007, KCPL experienced and projected the following levels of net margin (net profit) from off-system sales:

18	<u>Year</u>	<u>Do</u>	<u>llars</u>	
19	2001	**	**	
20	2002	**	**	
21	2003	**	**	
22	2004	**	**	
23	2005	**	**	
24	2006	**	**	Budget

20

21

22

23

** Budget 2007 1 2 [Staff Data Request 99.1R and 234] 3 Q. Why is it appropriate to include the net margin from off-system sales in the 4 current revenue requirement determination for KCPL? 5 The same generating facilities, equipment, and employee/personnel that are A. necessary to provide service to Missouri retail electric customers are also needed to make off-6 7 system sales. It is appropriate to include the net margin from off-system sales in this case 8 because KCPL customers are paying for all costs associated with the facilities to produce 9 electricity for the firm retail customers, i.e., native load customers. To the extent that other 10 sales can be made using those same facilities, the customers should benefit from these sales. 11 The off-system sales are made at a time when the generating facilities are not needed to serve the native load customers. Off-system sales represent an efficient utilization of the electric 12 13 system that has been put in place to meet the native load customers' electricity needs. Off-14 system sales occur at a time when the production facilities and purchases are not needed for 15 Missouri retail customers. Q. 16 Are all the costs of the plant investment and costs to provide off-system sales within the Missouri jurisdiction assigned or allocated to an electric utility's Missouri retail 17 18 customers?

A. Yes. All of these costs are included in the overall revenue requirement calculation. Return of and on plant investment and equipment, material and supplies and prepayments, costs of fuel, payroll and payroll benefit costs, training and employee development costs to operate the power production and transmission facilities; all costs relating to the production and transmission dispatch centers including the building (office)

22

23

costs, payroll and payroll benefit costs, employee development and training costs, computer and software costs are all assigned and allocated to the Missouri retail jurisdiction and included in customer rates.

- Q. Does KCPL benefit from the net margin from off-system sales?
- A. Yes. To the extent that there are increases in off-system sales that occur after rates are determined in any given proceeding, the Company will benefit from the growth and increase in net margins (off-system sales less fuel costs) throughout the period until rates are changed by the Commission in a general rate proceeding. Since KCPL has not had a rate case for over 20 years, the Company has directly benefited from the very significant increase in the off-system sales market since the mid-1990s. KCPL has experienced very significant growth to which it has directly benefited. Any sales over and above the level of sales at which rates were established goes directly to KCPL's earnings.
- Q. Has the Commission recognized the benefits of including the net margin from off-system sales in the determination of revenue requirements in prior cases?
- A. Yes. In a 1997 Aquila, Inc. (then UtiliCorp United, Inc.) rate case, Case No. ER-97-394, the Commission commented respecting the novel position that UtiliCorp proposed as follows: "UtiliCorp states that significant risk exists in the current UtiliCorp effort to enhance off-system sales and that there must be some incentive to UtilitCorp and its stockholders to aggressively pursue off-system sales. . . . To fairly compensate the UtiliCorp shareholders for assuming this risk, and as a future incentive, UtiliCorp is proposing to split the revenue derived from its test year sales on a 50/50 basis, including applying one-half of the total in revenue as an offset to rates while holding the other one-half out of revenue." The Commission stated, in part, as follows:

1

The Commission finds the Staff provided competent and substantial evidence that all of the off-system sales revenue should be reflected in the test year revenue for the purposes of setting rates. The Staff is correct in stating that, since all of the costs of producing the off-system sales revenue were borne by the ratepavers, and since UtiliCorp has benefited from regulatory lag, the total amount of this revenue should be included in rates.

8

7

The Commission adopts the adjustment proposed by the Staff.

9

10

Electrical corporations, other than in this just mentioned 1997Aquila case, and Staff in all cases that I am aware of dating back to the late 1970s have consistently included the net margin from off-system sales in the determination of revenue requirement.

11

12

Did the KCPL Experimental Regulatory Plan address off-system sales? Q.

13

A. Yes. KCPL specifically agreed to the inclusion of off-system sales in the ratemaking process. On July 27, 2005, a pleading was filed in Case No. EO-2005-0329

15

14

entitled Signatory Parties' Response to Order Directing Filing, which states in part as follows:

16 17

18 19 20

21 22 23

24 25

26

27 28

30 31

29

32 33 34

KCPL agrees that off-system energy and capacity sales revenues and related costs will continue to be treated above the line for ratemaking purposes. KCPL specifically agrees not to propose any adjustment that would remove any portion of its off-system sales from its revenue requirement determination in any rate case, and KCPL agrees that it will not argue that these revenues and associated expenses should be excluded from the ratemaking process. KCPL agrees that all of its offsystem energy and capacity sales revenue will continue to be used to establish Missouri jurisdictional rates as long as the related investments and expenses are considered in the determination of Missouri jurisdictional rates.

In a separate pleading filed on July 27, 2005, Staff's and Public Counsel's Additional Response to Order Directing Filing, Staff and Public Counsel further state as follows with regard to the off-system sales issue:

> KCPL, pursuant to its commitment to explicitly address the term of the understanding among the Staff, Public Counsel and KCPL concerning the treatment above-the-line of off-system energy and capacity sales revenue and related costs, has added the following sentence to the paragraph on off-system sales in the Stipulation And Agreement filed

Direct Testimony of	
Steve M. Traxler	

March 28, 2005: "KCPL agrees that all of its off-system energy and capacity sales revenue will continue to be used to establish Missouri jurisdictional rates as long as the related investments and expenses are considered in the determination of Missouri jurisdictional rates."

Q. Did the Commission address off-system sales in its Order approving KCPL's Regulatory Plan?

A. Yes. The Commission stated at page 18 of its Order in Case No. EO-2005-0329 regarding off-system sales the following:

Under the terms of the Stipulation, KCPL agrees that off-system energy and capacity sales revenues and related costs will continue to be treated "above-the-line" for ratemaking purposes. KCPL will not propose any adjustment that would remove any portion of its off-system sales from its revenue requirement determination in any rate case. KCPL agrees that it will not argue that these revenues and associated expenses should be excluded from the ratemaking process. During the hearing, KCPL also stipulated that it would agree to this treatment for off-system sales as long as the Iatan 2 costs were included in KCPL's rate base. (Tr. 1037-38).⁴

Also in their July 26 Response to Order Directing Filing, the Signatory Parties memorialized KCPL's agreement that all of its off-system sales would be used to establish Missouri jurisdictional rates as long as the related investments and expenses are considered in determining those rates, and amended Section III.B.1.j. of the

Did KCPL agree to amend the original language in the Stipulation and

Stipulation and Agreement.

Q.

A. Yes. In the July 26 Response to Order Directing Filing, KCPL agreed to amend Section III.B.1.j. of the Stipulation and Agreement to include the language "that all of its off-system energy and capacity sales revenue will continue to be used to establish Missouri jurisdictional rates as long as the related investments and expenses are considered in the determination of Missouri jurisdictional rates."

Agreement the Company signed on March 28, 2005, relating to off-system sales?

The original language included in the Stipulation and Agreement concerning the Experimental Regulatory Plan, appearing at page 22, stated:

KCPL agrees that off-system energy and capacity sales revenues and related costs will continue to be treated above the line for ratemaking purposes. KCPL specifically agrees not to propose any adjustment that would remove any portion of its off-system sales from its revenue requirement determination in any rate case, and KCPL agrees that it will not argue that these revenues and associated expenses should be excluded from the ratemaking process.

Q. Did Kansas Commission include off-system sales in its Order approving KCPL's Regulatory Plan in Kansas?

A. Yes. The KCPL Regulatory Plan in Kansas is very similar to one agreed to in Missouri. In the Kansas Stipulation and Agreement, filed in Docket No. 04-KCPE-1025-GIE, off-system sales were agreed to be included in the ratemaking process by the signatory parties to KCPL's Kansas proceeding. In Appendix C attached to the Kansas Stipulation in that docket, the following appears regarding the rate treatment of off-system sales:

 The Parties also agree that profits from off-system sales should continue to be included above-the-line in the regulatory process during the term of the Five-Year Regulatory Plan. KCPL specifically agrees not to propose any adjustment or modification that would remove any portion of its off-system sales costs and revenues from being passed through the ECA mechanism. The specific details of the ECA mechanism will be determined in the 2006 rate proceeding.

Q. Do other state commissions recognize the importance of including off-system sales in the determination of rates?

A. Yes. In an UtiliCorp United Inc. rate application filed in Kansas on December 8, 2000, its West Plains Energy, Kansas (West Plains) division proposed an adjustment to remove a portion of off-system sales from above the line treatment through a 50/50 "sharing" mechanism before the Kansas State Corporation Commission (KCC) in Docket No. 01-WPEE-473-RTS. The KCC rejected this proposal stating:

F. Sharing of Off-System Sales Margins

- 30. West Plains asks the Commission to reconsider its decision in Docket No. 99-WPEE-818-RTS to not allow West Plains to share in off-system sales margins. The Commission's decision was affirmed by the Kansas Court of Appeals in *UtiliCorp United, Inc. d/b/a West Plains Energy Kansas v. KCC,* slip op.85,716 (Kan.App.December 15, 2000). As discussed in Order Nos. 10 and 13 in Docket No. 99-WPEE-818-RTS, the cost of off-system sales are borne entirely by the ratepayers, while the Applicant has enjoyed all of the benefits of the increased revenue. If all of the costs are borne by the ratepayers, then all of the benefits of increased revenues should be enjoyed by the ratepayers. The full measure of revenues and costs related to these sales should be reflected in the cost of service at test year levels.
- 31. West Plains again asserts its proposed sharing mechanism provides incentive for West Plains to engage in off-system sales and compete in the marketplace. [Keith, Rebuttal at 17]. West Plains submits its proposed sharing mechanism is similar to the sharing mechanism allowed in another Commission proceeding, Docket No. 190,061-U. [Keith, Rebuttal at 17]. These arguments are the same arguments made by West Plains in Docket No. 99-WPEE-818-RTS. Consistent with the decision in Docket No. 99-WPEE-818-RTS, Staff made an adjustment to add back 50 percent of the sales margins that had been removed in the schedules filed by West Plains with its rate application.
- 32. The Commission remains concerned about any sharing mechanism that allocates the sales margins where 100 percent of the costs are borne by the customers. The Commission has not accepted a sharing mechanism, as proposed by West Plains, for any other electric public utility. The Applicant has an incentive to continue making off-system sales because the Applicant would retain all profits exceeding the normalized level reflected in the Applicant's overall revenue requirement. The Commission finds no compelling argument has been advanced by the Applicant to justify the Commission's departure from the prior decision and

1 2	adoption of a new policy regarding off-system sales. Staff's adjustment to off-system sales revenues is accepted.
3 4	[August 15, 2001 Order of KCC in Docket No. 01-WPEE-473-RTS, page 13-14; emphasis added]
5	Thus, UtiliCorp proposed a "sharing" mechanism in Kansas on two occasions and the KCC
6	rejected the proposal in both instances.
7	Q. Have the net margins from off-system sales been reflected in the overall
8	revenue requirement used to set rates in other electric utility rate cases in Missouri?
9	A. Yes. I have been involved in numerous electric rate increase cases,
10	earnings/revenues review cases, and excess earnings/revenues complaint cases in my years of
11	employment at the Commission involving KCPL, Aquila, Inc. and its predecessors UtiliCorp
12	United, Inc. and Missouri Public Service Company, St. Joseph Power & Light Company and
13	The Empire District Electric Company. I am also generally aware of similar regulatory
14	activity respecting Union Electric Company, now d/b/a AmerenUE and Arkansas Power &
15	Light Company, which sold most of its Missouri service territory to UE early last decade.
16	The net margin from off-system sales have consistently been used by the Staff and accepted
17	by the Commission to determine the overall revenue requirement of electrical corporations
18	within the Commission's jurisdiction.
19	Q. Are off-system sales a part of the true-up process in this case?
20	A. Yes. At page 30 of the Stipulation and Agreement in Case No. EO-2006-0329,
21	under paragraph a. Rate Filing # 1 (2006 Rate Case) the Signatory Parties anticipated that the
22	true-up would include off-system sales:
23 24 25 26 27	(i) <u>Schedule.</u> The specific list of items to be included in the true-up proceeding shall be mutually agreed upon between KCPL and the Signatory Parties, or ordered by the Commission during the course of the rate case. However, the Signatory Parties anticipate that the true-up items will include, but not necessarily be limited to, revenues including

	Direct Testimony of Steve M. Traxler
1 2 3 4	off-system sales, fuel prices and purchased power costs, payroll and payroll related benefits, plant-in-service, property taxes, depreciation and other items typically included in true-up proceedings before the Commission.
5	In fact, this same language is used for each of the four rate cases contemplated in the
6	KCPL Experimental Regulatory Plan.
7	Q. Does Staff intend to review KCPL's net margin from off-system sales as part
8	of the true-up audit agreed to and directed for this case through September 30, 2006?
9	A. Yes. As stated previously, the Staff's direct filing reflects the net margin from
10	off-system sales revenue and costs based upon the test year level, 2005. The Staff will revisit
11	this position after reviewing actual data for the nine month period ending September 30, 2006.

A. Yes, it does.

14

12
