> PROCEEDINGS

J UDGE PRI DG N: Good evening. We' re on the record. It is six o' clock, and the M ssouri Public Service Commission has set this time for a local public hearing in Case Number EA- 2015-0146. I'mRon Pridgin. I'mthe judge presiding over toni ght's hearing. And with me this evening is the chairman of the Commission, Chai rman Hall.

Mr. Chai rman, are there any opening remarks you would like to make before I go any further?

CHAI RMAN HALL: Yes. Thank you, Judge.
Good evening. This is the third of our Iocal public hearings in this matter. I want to make it perfectly clear that all of your comments today are transcribed and put in the record to be considered by the Commi ssion in reaching our decision. We take your comments very seriously. It's the reason why we schedule these heari ngs.

And you may or may not know that in -- ot her states don't necessarily follow this process. There's a I ot of other states where there are few, if any, local public hearings. And at those hearings there may or may not be commissioners present. In Mssouri, it is -- it is an integral part of the process. We take it very seriously. And I very much look forward to hearing your
comments toni ght. Thank you.
J UDGE PRI DGI N: Mr. Chai rman, thank you.
Let me see if counsel that would like to make an appearance. Anyone on behal $f$ of ATXI ?

MR. TRI PP: Yes. M chael R. Tripp, Smith, Lewi s, LLP, 111 South Ni nth Street, Col unbia, M ssouri.

J UDGE PRI DGI N: Mr. Tripp, thank you.
On behal $f$ of the Commi ssi on Staf $f$ ?
MR. W LLI AMS: Nat han Willi ans, P. O. Box 360, J efferson City, M ssouri 65102.

JUDGE PRI DGI N: Mr. Willians, thank you.
On behal f of Publ ic Counsel, please?
MR. OPTI Z: Thank you, Judge. Ti m Opitz on
behal f of the Office of Public Counsel, P. O. Box 2230, J efferson City, M ssouri 65102.

J UDGE PRI DGI N: Mr. Opitz, thank you.
On behal f of Nei ghbors Uni ted, pl ease?
MG. HERNANDEZ: J enni fer Her nandez, Her nandez Law Firm LLC, 1802 Sun Valley Drive, Jefferson City, M ssouri 65109.

J UDGE PRI DG N: Ms. Her nandez, thank you.
On behal f of United for M ssouri, pl ease?
MR. LI NTON: Good evening, Your Honor.
David Li nt on on behalf of United M ssouri, 314 Romai ne Spring Vi ew, Fent on, M ssouri 63026.

J UDGE PRI DG N: Mr. Li nton, thank you. Any ot her counsel?

All right. Before taking any testimony, l'd like to gi ve you some information about why the Commission is hol ding this hearing. As you may well know, ATXI applied to the Cormission for approval to construct a transmission line and associ ated facilities in Shel by, Marion, Knox, Schuyler, and Adair Counties in Mssouri, and an associ at ed converter station in Adai $r$ County.

The Commission may grant permission if it finds this transmission line is necessary or conveni ent for the public service. The Commissi on cannot deci de any questions about eminent domain. Those questions can only be addressed by a circuit court.

The Cormi ssi on has schedul ed evi dentiary hearings for December of this year to take evi dence, but toni ght's hearing, the purpose is to give the public a chance to comment about the project.

A bit of housekeeping: This building closes so that we will need to be done with the hearing by 11:00. We'll do everything we can to get everybody heard by 11:00. I've al ready warned counsel that l don't know if we'll run over or not, and so l will ask folks to limit their comments to five minutes or less. I will give you a warni ng when you' ve approached your five min nutes.

When I call your name, if you'd please come to the podi um I will put you under oath. If you do not wi sh to take an oath, please let me know and l will ask your testimony to be affirmed instead. Commissioners won't be able to answer any of your questions, but we are happy to hear from you this eveni ng.

Al so, if you have testified before, I would ask that unl ess you have something new to add since your Iast testimony that you please let me know. And l'II remenber some of you. And if you'll go towards the end of the line and let people who have not testified have a chance to testify this eveni ng.

All right. Let me move on to the first witness, and that is Representative Nate Wal ker.

If you'll raise your right hand to be sworn, please, sir.
(Wtness sworn.)
J UDGE PRI DGI N: Thank you, sir. If you would please state and spell your name for the court reporter. Then you may begin your remarks.

MR. WALKER: Okay. Thank you. My name is Nate Wal ker, N-A-T-E WA-L-K-E-R. I'mthe Third District State Representative. I represent the City of Kirksville, where we're at toni ght; western parts of Adai r County; all of Sulitvan County, where MIan is; all of Putnam county,
where Uni onville is; and all the way across to Mercer
County, where Mercer and Princeton are.
J UDGE PRIDGI N: Mr. WAl ker, I'msorry, if I could ask you to speak into the mic. I think some people in the back are --

MR. WALKER: I don't know if this mic is as good as the mics we' ve had in other public --

AUDI ENCE: We can't hear anything, Judge. J UDGE PRI DGI N: Al I right. Just a moment, pl ease.

MR. WALKER: Okay. Is that better?
AUDI ENCE: No.
MR. WALKER: There it is.
JUDGE PRI DGIN: Al I right.
MR. WALKER: I guess maybe -- there was an el ectrical current wasn't working quite right toni ght.

But for the record, for you -- and you have a great job toni ght, but my name is Nate Wal ker, $\mathrm{N}-\mathrm{A}-\mathrm{T}-\mathrm{E}$ WA-L-K-E-R.

I represent the Third District. The Thi rd District is the City of Kirksville, where you're at now, western parts of Adai $r$ County; the county of Sullivan, where MIan is; the county of Put man, where Uni onville is; and the County of Mercer, where Mercer and Princeton are.

I've al so had the di stinction -- I have an
asterisk by my name at the capital. l've al so served in the I egi slat ure prior to -- to this time. I've served two terns in 1981 to 1985. And I represented Shel by County and parts of Knox County and those parts are where this line -proposed line are to go through.

So I know most of the citizens in this area
very well. And I thi nk you' ve heard fromthemfromthe hearing over in North Shel by Hi gh School over near Shel byville last week, and then last ni ght up in Queen City, that there's a lot of concern about this line. And I won't repeat a lot of those concerns, but you'll -- you're goi ng to hear some really good testimny again toni ght.

But we feel that this is a project that is not good for north M ssouri. And we feel that this project needs to be denied by the Public Service Cormission.

I want to wel cone Chai rman Hall here, and thank you for being here toni ght. And Judge, thank you for bei $n g$ here again. You' ve been to all three of them so you ki nd of know everything that's going on with the hearings.

But, certai nly, we were di sappoi nted no commi ssi oners were there last night, but we are privileged to know that we' ve had three commissioners of the five that have been at least here. And I know that you're not requi red to be there and there's lots of different things that are going on.

But I appreci ate you bei ng here, Chai rman Hall. And I have known himfor a long time. He's -you're an honorable public servant, and I appreciate your service on the Public Service Cominsion.

So at this time, I just would like to again wel cone you all here and ask you to be open-minded and listen to the testimmy of the citizens here of northern Mssouri. If you have any questions, l'Il be glad to answer them

J UDGE PRI DG N: Mr. Chai rman?
CHAI RMAN HALL: No questions. Thank you, Repr esent at i ve.

MR. WALKER: Thank you.
JUDGE PRI DGI N: Thank you, sir.
( Appl ause)
J UDGE PRI DGI N: Ti m Supranowi ch. I hope I pronounced that correctly. If you'll rai se your right hand to be sworn, please.
(Witness sworn.)
JUDGE PRI DGI N: Thank you, sir. Please state and spell your name for the court reporter, and then you may gi ve your testimm.

MR. SUPRANOW CH: My name is Tim
Supr anowi ch, T-I-M I ast name S-U-P-R-A-N-OW-C-H. I al so own a farmin northern Boone County. I want to thank
the PSC for setting up this meeting, and l want to start out by saying that I amin favor of the Mark Twain transmissi on project.

And basi cally, you know, why does M ssouri need this line? It's because the EPA has an enacted the Cl ean Air Act. By 2020, pl us or minus 20 percent of the coal gener ation in this state is going to have to be taken out of service. In 2013, 83 percent of the -- M ssouri's el ectricity came from coal, and now they're wanting us to retire 20 percent of those pl ants.

Over 50 pl ants have al ready been retired in the central part of this country. And, in fact, Associ ated El ectric just retired thei r Chamoi s plant, which is -earlier this year, whi ch is located east of Jefferson City.

Al so effective August $3 r d$, the EPA enacted the Cl ean Power Plant. Well, they're saying now upwards of 30 percent of coal generation is going to retire in the next seven -- by 2022, 2024.

So 30 or 40 years ago this woul dn't be such a big problem because all utilities were required to have 15 percent spinning reserve. That's gener ation onl ine spi nni ng unl oaded. That way if anything happened -- a li ne trip, a generator trip-- the load would aut omatically be pi cked up; there woul dn't be any problens. That's the way the systems were oper ated back then.

Then some smart politicians came up with the idea of deregul ation. They thought it was a good idea. And you' ve got -- everybody needs to thank the Public Servi ce Commission after toni ght's meeting because the State of Mssouri did not enbrace deregul ation, you know, whi ch resulted in Mssouri having some of the cheapest rates and the most reliable service of any utilities in the country. So they've done us all a favor.

States that did embrace it were California, IIIinois, Ohio, Pennsyl vania, New York, and states like that. This resulted in multiple interties bet ween utilities, so utilities could buy and sell generation so that 15 percent spinning reserve di sappeared. It changed the generation mix, and in doing so it wasn't a very good i dea.

In 2003, a 345 KP line in Ohio sagged into a tree. It was tripped out because it went to ground. It then cascaded the system and knocked out the entire power grid from Ohio up through Pennsyl vania, into New York. You can go Google that online and you can see all the fol ks wal ki ng over the Tappan Zee Bridge, the Washingt on Bridge out of New York because the whol e mass transit system has been shut down.

So fast forward to now. We' re going down the same path. The EPA is wanting us to shut down our
coal-fired plants. And what are we going to do? So that's why we' re here today.

Is the sol ution wi nd power? It's an option, but here's a profile of how wind reacts. You can go to mi soenergy. org and they have the daily wi nd load curves. And you can see bet ween the Iow point of today there's maybe three to four times' difference in the wind gener ation.

The only probl em with wi nd generation -- and it's -- this signature is common for every day -- most of it happens fromtwel ve o' clock at ni ght until six o' clock in the morning. Now, that's not a lifestyle change for me, because typically I have to get up a couple times a ni ght, so that works for me.

But I don't know about people, if they're willing to start taking their kids to school, going shopping at ni ght, doing thei I aundry, or what. But there are -- wind is a sol ution, but it's not the perfect fix as compared to coal generation.

Sol ar is another option. In the northern hemisphere, where we're at, the sol ar availability factor is 11 percent. So out of the year, if you have one kW of sol ar, you will generate 6, 700 kilowatt hours. That's sometime just a couple of months of usage. If you have kW of coal-fired generation, that will generate over 61,000.

But believe it or not, we could argue that poi nt back and forth. The plants are going to be closed, and this is why we're here. The most logi cal sol ution, and most economical sol ution, is to build this transmission Iine and tie Mssouri to the states to the north.

The northern states are al so going to have to shed 20 to 30 percent of their coal generation because of the clean power plant. Ri ght.

J UDGE PRI DGI N: Your five min nutes are up.
MR. SUPRANOW CH: Oh, they' re up?
J UDGE PRI DGI N: Yes, sir.
MR. SUPRANOW CH: Wbw, that was qui ck.
Okay. So I amin favor of it. I mean, this is really serious. That was just passed a couple of weeks ago. And I hope you take that in your consideration. I hope -- । encourage everybody to support Ameren and vote for it. Okay. Thank you very much.

MR. W LLI AMS: Judge, if I may.
J UDGE PRI DGIN: Mr. Willians.
MR. WLLI AME: Si r, you showed a docurent. Is that something you would like the Commission to see?

MR. SUPRANOW CH: Yeah. I've al so got a drawing of a transmission grid around here, and you can see with this --

J UDGE PRI DG N: If you' II take that to J UDGE

PRI DGI N reporter to be marked.
( WHEREI N, Exhi bits 1 and 2 were marked for i dentification)

MR. SUPRANOW CH: Okay. That's a drawing of the transmission grid, and the transmission stops -- grid stops way south of here. So you are on the tail end of the system Okay. Here's a profile for wi nd generation. And I thank you very much.

J UDGE PRI DGI N: Thank you, sir.
CHAI RMAN HALL: I have a coupl e three questions. Excuse me, sir. Where do you live?

MR. SUPRANOW CH: I live in Wildwood, M ssouri.

CHAl RMAN HALL: So you' re -- you don't live anywhere close to the proposed line?

MR. SUPRANOW CH: No. I am-- from M ssouri. But I am very --

MR. WLLIAMS: It doesn't in any way negate the significance of what you said. I understand that. I'm just -- I'mtrying to -- I just want to make it clear that you don't live close to the line, and so you would not be directly -- or adversel y affected by the line. I just want to make that clear.

MR. SUPRANOW CH: No, sir. No, sir.
MR. W LLI AME: Thank you.

MR. SUPRANOW CH: But l've been in this busi ness for over 40 years. Thank you.

J UDGE PRI DGI N: All right. John Rei nhardt. If you'll raise your right hand to be sworn, please.
(Wtness sworn.)
J UDGE PRI DGI N: Thank you, sir. If you would, please state and spell your name for the court reporter, and then you may gi ve your testimony.

MR. REI NHARDT: My name is J ohn Rei nhar dt. It's spelled J-OHNR-E-I-NH-R-D. T.

I'mvice president of a distributor that is located in St. Louis, M ssouri. We empl oy over 50 people and have been in busi ness, supplying el ectrical services and material to the el ectrical utility market for over 50 years, which incl udes el ectrical cooperatives and muni cipals in the state of Mssouri, Iowa, and IIIinois.

I was born, raised, educated, and still reside today in the great state of Mssouri.

As many of you are aware, the infrastructure of our el ectrical grid is aging, becoming less and less reliable every year. Many utilities across the county are rei nvesting in these lines to make them more reliable. The Mark Twain project is one of those lines that is needed to i mprove the reliability for families and businesses in M ssouri.

If any of you have experienced a nat ural di saster -- be it a tornado, be it an ice storm whatever it may be -- you realize what it means to have reliable power for your family and busi nesses.

These situations can happen at any time, any pl ace, and create potential dangerous situations within seconds. And it's crucial to have alternate avenues to bring power into these areas when disaster hits.

I personally have experienced many of these storms, having supplied countless hours of procuring material to restore these areas. Many of these areas were able to get temporary power by feeding off the lines that were located in areas not affected by these storns.

Thi s line will al so hel p deliver clean, envi ronment ally responsi ble wi nd energy to M ssouri, hel ping to meet the renewable energy standards that we, the M ssouri voters, over whel mingly voted for and approved in 2008.

Because of the lay of the Iand in northern M ssouri and Iowa, it is the best area to create this wi nd energy. I mproving exi sting transmission lines and adding new ones like this Mark Twain one is hel ping us prepare for this generation and many generations to come.

I personally live within a quarter mile of this size of line. My family routinel y takes wal ks under
it. We -- my kids have played ball and sledded under these Iines. And I can tell you, we have no health issues as a result of that exposure.

About ten or 15 years ago, our industry was very concerned of the effects of these lines on thei $r$ commity. We sold many devi ces to hel p measure the el ectromannetic waves that were such a concern. These devi ces -- these devi ces hel ped show that you're exposed to more waves within your home than you are exposed to di rectly under these lines.

There are currently three lines -- three hi gh- voltage lines that are located within the five counties impacted by this Mark Twain project, whi ch have been operating for over 40 years with no human or ani mal health impact. I would encourage each of you to learn more about this. There are plenty of studi es out there that show these facts.

I would al so encourage the commity to work with Ameren and their -- or any of the utility companies to try -- that are trying to improve the reliability and envi ronmental impact they have on their commities.

I understand the concerns that a lot of fol ks in this room have toni ght with this project, but l think you will find Areren will be very responsive to the commity's needs and will make every attempt to meet your
needs.
Many of you are here toni ght to be part of this process, and l would encourage you to stay engaged. Ameren will work with the farmers and Iandowners to coordinate pole locations to minime the impacts on your farming community. Utility compani es want to be more -want to be responsive to your needs and want to deliver a product that is envi ronment ally sustai nable. Thank you very much.

J UDGE PRI DG N: Mr. Rei nhardt, thank you. Mr. Chai rman?

CHAI RMAN HALL: I have no questions. Thank
you.
J UDGE PRI DG N: Al I right. Thank you.
MR. REI NHARDT: Thank you for the time.
J UDGE PRI DGIN: All right. The next witness is Ken Nobbe (ph). Mr. Nobbe, did you testify Iast ni ght?

MR. NOBBE: Yes, I did.
J UDGE PRI DGI N: Do you have somet hi ng earth-shattering to add to that that woul d --

MR. NOBBE: No, I do not. My testimony is similar. I -- I would be happy to step down and let others speak.

J UDGE PRI DGI N: I appreciate it. If there's time towards the end, we'll be glad to hear fromyou agai $n$.

MR. KNOBBY: I would just like to say that we are in favor of the line.

J UDGE PRI DGI N: Al I right. Thank you.
All right. Steve Luet kehans. I hope I'm pronouncing that correctly. If you'll rai se your right hand and be sworn, please.
(Witness sworn.)
J UDGE PRI DGI N: Thank you. If you woul d, please, state and spell your name for the court reporter, and then you may testify.

MR. LUETKEHANS: Steve Luet kehans. Steve, S-T-E-V-E, Luet kehans, L-U-E-T-K-E-H-A-N S.

And I work for Henkel s \& MECoy. We empl oy over 5, 000 men and women across the U.S., incl udi ng many in Mssouri. For background, we have built thousands of miles of transmission Iine throughout the United States, incl udi ng M ssouri, and we' ve built them saf el $y$.

I'mhere to support the Mark Twain transmission project to hel p del iver needed renewable energy as well as improve area power reliability.

This project will create over 200 direct jobs and many others indirectly. Many of the jobs will be hired locally, and some fromoutside the area.

So, if approved and built, the project would generate local revenue and tax dollars through workers'
purchases of hotel roons, restaurants, grocery food and gas. Material construction will al so be sourced locally to incl ude things like tools, aggregate, and fuel.

As a company and person that builds and works around transmission lines every day, I want to iterate, there are no health issues associ ated with the building and operations of transmission lines, both to human as well as farmani mals.

On other projects we' ve seen Ameren has worked closel y with the Iocal agenci es and I andowners and observed themto be a great local partner. I would expect them to do the same on this project. And, in concl usi on, this is a good project for Mssouri and good project for the local area and ask for your vote.

J UDGE PRI DG N: Al I right. Thank you.
Mr. Chai rman, any questions?
CHAI RMAN HALL: Yeah, Judge. So you work for Ingles \& McCoy?

MR. LUETKEHANS: Henkel s \& McCoy.
CHAI RMAN HALL: Henkel s \& McCoy.
MR. LUETKEHANS: Yes.
CHAI RMAN HALL: And what is the nat ure of that busi ness?

MR. LUETKEHANS: We build transmission Iines for utility construction compani es.

CHAI RMAN HALL: And do you have a contract in connection with this line?

MR. LUETKEHANS: No, we do not.
CHAI RMAN HALL: Will -- do you intend to bid on that line?

MR. LUETKEHANS: That woul d be up to Ameren, but I would hope so.

CHAI RMAN HALL: And so when you testify that there's up to 200 jobs in the area, what do you base that on?

MR. LUETKEHANS: We' ve done ot her proj ects in the area -- the Mbnt gomery Hills project, and we empl oyed approxi mately 150 on that project, and that was a much shorter line.

CHAI RMAN HALL: So it would be 200 for the construction of the entire line?

MR. LUETKEHANS: That's a -- that would be for the line work that we'd be responsible for.

CHAI RMAN HALL: For the I ine work. Okay. Thank you.

MR. LUETKEHANS: Yep.
J UDGE PRI DGI N: Cormi ssi oner Rupp, any questions?

COMM SSI ONER RUPP: No, Judge.
JUDGE PRI DGI N: Al I right. Thank you. The
next witness is Randy Shahan. If you'll rai se your right hand to be sworn, please.
(Witness sworn.)
J UDGE PRI DG N: If you would, please, state and spell your name for the court reporter --

MR. SHAHAN: My name is Randy Shahan, R-A-N-D-Y S-H-A-H-N. And I Iive in Kirksville, Mssouri. I'mnot in the city limits of Kirksville, but l'ma farmer and $r$ ancher.

I'mglad all these people fromAmeren UE are here, because this gives me an idea that it doesn't seemto be anybody around here cl ose that is affected by this line. And I would thank the PSC menbers for the opportunity to speak before you and air my concerns invol ving this travesty brought upon us by -- M ssouri by XTI (sic) Ameren of lllinois.

My first concern is em nent domiain. Taking a property for one profit entity and gi ving to another for-profit entity. And yes, I, as a farmer and rancher and cattling, I hope each year to make a profit. This is not what eminent domin is intended to do, to take one property from one for-profit entity for the profit of another for-profit entity.

Another great concern of mine is deval uation of property val ue. Multiple studi es by state agenci es and
uni versities has shown that depending on how the hi gh- voltage lines cross the property, projects of this nat ure would deval ue the owner's property from 9 to 39 percent, and maybe more -- not only the val ue of this property, but the val ue of your nei ghbor's property, his nei ghbor's property, and his nei ghbor's property, and so forth on down the line. This creates a rural ghetto, just in the same manner as an urban ghetto.

Many of you rely, l'msure in here -- many of you are government agencies and so forth like this, and Ameren UE people. You're rel yi ng on your 401(k)s and your pensi ons for your retirement income. We as cattlemen and farmers do not have these. Our retirement income must be fromthe val ue of our land, either to sell or to rent.

Just think if your retirement income was cut by 39 percent. What would this do to you and -- to your way of life? You might, because of this loss and as you get ol der, become indi gent and not able to pay for your health -- well-being and healthcare. Then you'd become a burden on the taxpayers of the county, the state, and the nation -- all this brought forth by XTI Ameren of Illinois's project.

Heal th concern I have: Many people don't think of heal th concerns, but l do. Another concern is health-- my personal health and the health of my wife,
children, and others who need to be on my property from time to time.

I, as a cattlemen use a method intentional hog rotational grazing. This is moving cattle under my care from one location to the next location at a fairly rapid pace, never letting grasses consumed by the cattle get bel ow three to four inches in hei ght, and not coming back on this area 30 to 60 days -- for 30 to 60 days.

This allows the grasses to grow and thrive, and doing so creates a wildlife habitat that could be beneficial not only to -- for cattle, but al so for endangered speci es such as the Mbnarch butterfly and bees that pollinate the crops that provide food to feed us and the world.

All this done -- all this is done by using an el ectric fence system Rotational grazing and moving -it moves el ectrical fences each time you move the cattle. These fences must go under the XTI Ameren of IIIinois's proj ect ed I i ne.

A hi gh-voltage line creates use el ectromgnetic fiel ds that can supercharge any el ectric cattle fences, but al so my watering systemthat my cattle must drink fromand I must maintain and the equi pment that I must work with.

I, for one, do not want my cattle under my
care to die or the high-voltage line to cause my death or anyone el se's death fromelectrocution and for it to be called collateral damage by XTI of Ameren of IIIinois. I know they have collateral damage in their business. They al I figure that in. But I do not want to die. And I'mnot particularly interested in that.

And I have some ot her concerns. I have XTI projects, and I'm happy to expl ai $n$ these concerns indi vidually if time would permit. I would just read these and then after that I will close out:

Increased Iiability risk; increased insurance costs; increased in expenses in stay voltage; increased educational expense for operators and workers to ensure saf ety; increased multiple exposure to ensure operator, worker, and Iivestock safety; damage to due to soil mix and soil compaction and soil erosion.

You know, you can take a satellite imge and I ook across the United States and you can see wagon train tracks -- oh, my goodness -- fromthe 1800s. All right. l'Il forget that. I'd like to speak a little more on some of $t$ hat.

But personal observation -- and not personal observation on my part -- the lines affects property l own. On some parts this line would cut di agonally across my property, causing additional burdens, and safety concerns.

XTI of IIII nois has not been open and forthcoming in hel ping people understand thi s project. They ref use to answer important questions a landowner needs to know. If you ask agai n, they will ask you to leave or you'll be escorted out by security. This is a form of intim dation. That's all that is. It's like a bully on a school yard.

If you refuse to sign their paper and you'll be escorted out. I, for one, do not sign papers willy-nilly. If this is the kind of entity you want in the state of Mssouri, who treats Mssouri citizens in this manner -- I don't beli eve so.

And in closing, 99.99 percent of the commi ssi oners of the five Mssouri counties this project i mpacts have si gned papers to the effect that this project does not benefit the counties or its citizens that reside in the counties they represent. We should never be here just because of that.

And fromthe heart, my parents who lived before me and myself who was added to these properties would be heartbroke to see what we all worked so hard to keep intact, the beauty that God created destroyed by a project of this nature. And I, Randy Shahan, stand bef ore you and I will fight with all my might to preserve the beaut y that God created. Thank you.
( Appl ause)
JUDGE PRI DGI N: Thank you, sir.
Mr. Chai rman?
CHAI RMAN HALL: Your Honor -- yes.
MR. SHAHAN: I forgot to say that I have a
letter here froma nei ghbor that I shoul d' ve said -- I need to read before you.

J UDGE PRI DG N: You' re wel cone to submit that to JUDGE PRI DGIN reporter if you' d like.

MR. SHAHAN: I don't have time to read it for him lt's very important. He's an ol der gentleman.

CHAI RMAN HALL: If you wi sh.
MR. SHAHAN: Do you have a question for me or anything?

CHAI RMAN HALL: Yeah. I do have a coupl e questions. Did you say that the proposed line would run di agonally across your farmp

MR. SHAHAN: Yes.
CHAI RMAN HALL: How many -- or how many -for what di stance woul d it run across?

MR. SHAHAN: Well, it would run across about a quarter of a mile di agonally across on the one pi ece of ground I own. Yes.

CHAl RMAN HALL: And do you have any ot her transmission or distribution line easements over your
property?
MR. SHAHAN: No. No. No. Thi s -- that's one place that would run di agonally. I have another farm that it will run across, but it's not diagonally; it's runni ng parallel with the back part of my farm

CHAI RMAN HALL: So -- oh, the -- whi ch Ii ne runs parallel? The -- on a different farmp

MR. SHAHAN: The north line runs on the back side of $m y$ farm

CHAI RMAN HALL: Okay.
MR. SHAHAN: Your proposed line to connect everything west of town runs di agonally across.

CHAI RMAN HALL: Okay. Thank you.
COMM SSI ON RUPP: Good eveni ng, sir. You made a statement that if you di dn't get information in a meeting then you would be asked to leave and then shown to the door by security. If you'd --

MR. SHAHAN: That's right.
COMM SSI ONER RUPP: Coul d you expand on that?

MR. SHAHAN: Yes, I can. There was a gentleman sitting right here that was asking pertinent questions -- right here was asking pertinent questions, and they escorted himout.

COMM SSI ONER RUPP: When -- and when and
where was this?
MR. SI DWELL: It was -- me. They sure did. COMM SSI ONER RUPP: Are you goi ng to comment I ater, sir?

MR. SI DWELL: No, sir, but I can --
MR. SHAHAN: Oh, I can comment on all of it.
COURT REPORTER: I need his name if he's goi $n g$ to speak.

MRS. SI DMELL: I've got the whol e thing right here.

MR. SI DWELL: Ri ght here, because I can see --

MR. SHAHAN: I went to a meeting out here at a local church. I come to the meeting. They asked me to sign a paper. Well, l don't sign a paper willy-nilly, like I said. I do not do that. I wal ked -- stepped on in. They said I would have to leave, and I said okay, I will. And I stood there and tal ked, and they brought security and escorted me out.

I did not do a thing but not -- ref use to si gn a paper, and they escorted me out by the police. Di dn't cause a ruckus. Di dn't cause anything. That's what I am dealing with. That's what l've dealt with, right out here at a local church -- a church, mind you -- with security.

Well, anyway, l'd like to read this letter on behal f of Wal do West -- WA-L-D O WE-S-T. He's a nei ghbor and not able to be here because of illness.

He says: I appreciate the opportunity to express my concerns regarding the proposed Ameren power Iine. I first became invol ved with the Ameren proposal when I attended an informational meeting in this area about one year ago at a fellowship church on Jamison Street in Kirksville.

I understand that there were powerful interests and opi ni ons regarding this project, but never in my 81 years had I seen a local meeting at a house of worship attended by armed policemen. There you go.

My name is hal do West, and I've ouned my 307
acres for over 25 years located three miles east of Kirksville, bordered on the south by state bl acktop Hi ghway 6 , on the west by Strawberry Way, and on the north by Bermuda Way. This farmhas excellent access on three sides. This farmor part of it is not for sale at any price. And he underlined about that.

I have had many offers to sell parts of the farm and on two occasi ons to sell the entire 307 acres. The ouner of a large local lunber yard has made several trips to talk to me about purchasing the 370 (sic) acres and said he al ready had interested devel opers. l told him

I was not interested. And while the local banker has made several attempts to purchase the 370 acres and gave me a written contract for it, which l declined.

The Ameren people have shown me on a map how my farmis perfect farmfor Ameren, they say. Ameren representatives said my farmis level, free from ditches, trees, brush, and would be perfect for themto build on.

He told me that the federal government requires, as l remenber it, for the line to be inspected two times per year for safety. This represents continued -- the representative continued to tell me that Ameren is very conscientious and they would inspect it one or two times on their own and that my land would be very conveni ent to inspect because land could be easily driven upon.

And it will just take me a second to finish the page.

I told Ameren -- the Ameren man the line would generally deval uate my farm on the 150-foot easement, and will likewi se deval ue the remaining I and by nearly half because of the 90 - to 100 -foot poles with several 340, 000-volt lines crossing the heart of my farm Who would want to invest and devel op this farmat a later date with a 35, 000-volt (sic) power line across it forever and no income fromit?

Later, an Ameren woman told me that l would get a one-time payment for use of the easement ground. I woul d recei ve no compensation for the deval uation of the remai ni ng I and, and not hing for my inconveni ence and process regarding the health of family, livestock that live near the line.

I am well known as one of Adai $r$ County's most dedi cated conservation-minded farmers. Conservation is defined as wi se use of our nat ural resources. The power line is anything but wise use for our nat ural resource. I don't want anything to do with it. Respectfully submitted by Wal do West.
(Appl ause)
JUDGE PRI DGI N: All right. Thank you. l'Il show it as Exhi bit 2.

COURT REPORTER: Actually, Judge, it's 3.
J UDGE PRI DGI N: 3. Thank you.
( WHEREI N, Exhi bit 3 was marked for
identification.)
MR. SHAHAN: Any questions?
CHAI RMAN HALL: No further questions.
MR. SHAHAN: Thank you, gentlemen.
J UDGE PRI DG N: Thank you.
CHAI RMAN HALL: Thank you for your
testi mony.

J UDGE PRI DGI N: Davi d Debord, if l'm readi ng that name correctly.

MR. DEBORD: Yeah.
JUDGE PRI DGI N: If you' II rai se your right hand to be sworn, please.
(W) $W$ ness sworn.)

J UDGE PRI DG N: Thank you. If you woul d, please state and spell your name for the court reporter, and then you may testify.

MR. DEBORD: My name is David, last name Debord, D-E-B-O-R-D. All right.
l'd like to say that we are for the proposed Mark Twain transmission line. I ama subcontractor for a utility company that does and has worked for Ameren in the past and currently am working for another transmission line that is just south of here, the line that went from M ssi ssi ppi Crossing to Mapl ewood.

I just want to point out that there is a bunch of good points that will come fromthis transmission line, not only the economic benefits that will -- we all heard earlier -- hotels, schools, et cetera -- will all benefit fromthe financial impact that is coming here.

Basi cally just want to say that l work under neath transmission lines every day. l'mjust like everybody el se here. I have no health concerns fromit.

Envi ronment al stewardess is of utmost importance to Ameren fromits previ ous projects. And just say l look forward to working in the state that l live in.

J UDGE PRI DGI N: Thank you. Any questions?
CHAI RMAN HALL: No questions. Thank you for your testimony.

J UDGE PRI DGI N: Al I right. Thank you. Teri page. ME. Page, have you testified before?

MS. PAGE: No.
J UDGE PRI DG N: Okay.
ME. PAGE: I have not.
JUDGE PRI DGIN: Al I right. Thank you. If you'll raise your right hand to be sworn, please.
(Witness sworn.)
J UDGE PRI DG N: Thank you. Pl ease state and spell your name, and then you may give your testimny.

MS. PAGE: My name is Teri page, T-E-R-I P-A-G-E. I'mal so speaking on behalf of $m y$ two children who are in the audi ence. Thank you for being here toni ght to hear our testimony.
l'mopposed to the Mark Twai $n$ transmissi on project for many reasons, but toni ght l'Il focus on two that are closest to my heart.

We moved to northeast Mssouri three years ago and invested our life savings in a beautiful pi ece of
property in Adair County. We' ve spent countless hours building our home with our own hands, creating organic gardens and orchards, and rai sing ani mals for food so we can provi de our children, who are ages four and seven, with a beautiful, healthy, and safe life.

When I first heard that this project was proposed to cut di agonally across a corner of our property in a swath right next to the woods that we walk in daily, l was extremely concerned -- concerned about the devastation to the wildlife that use this forested corridor, concerned about the wetland that would be destroyed, but mostly concerned about my children.

Medi cal studi es and the Wbrld Health
Organization have pointed to an increase in leukemia in young children living near high-voltage lines such as this one. The International Agency for Research on Cancer classifies EMFs fromhigh-voltage power lines as possible carci nogens. This is the same classification that the IARC gi ves ci garettes.

Some here will claimthat there are no heal th risks of high-voltage power lines and EMFs, but one thing that's crystal clear: We need to know more. At this point in time, with the research available, we can simply not say that there is no risk to our children, to our livestock, to expectant mothers. And as a mother of two
young children, I am not okay with this risk.
ATXI's website and brochure clai mto consi der schools in their routing criteria, and l would assume that this means that they seek to avoid schools. But yet my family, and indeed all of the families that -within a half mile of me, are homeschooling families.

At least five children and one more yet to be born child live and study and play out doors within a few hundred feet of the proposed route. If ATXI is avoi ding schools, why are they not avoi ding our home-based school?

When I expressed my concerns at ATXI's open house, their EMF expert laughed at my concerns for my children -- yes, laughed to my face. So many of us have been treated with such utter di srespect throughout this entire process.

But my bi ggest frustration is hearing again and again that this project is necessary for Mssouri, and yet when we look at Mssouri's el ectricity use over the past decade it has declined and will likely continue to do so.

I do not believe that this project is necessary, mostly because l live on a street right here in Adai $r$ County where out of ni ne househol ds, ei ght of us live without any connection to the grid. If that sounds i mpossible, let me assure you that it is not.

We Iive without any connection to what ATXI likes to call the "grid of the future." We rai se families. We grow food. We own small busi nesses. We host thousands of visitors, and we homeschool our children. In short, we live fully productive, rich, and normal lives without damaging forests, farmand, and homes with costly and destructive transmission lines.

In my own home we use rooftop sol ar to generate el ectricity. We have three sol ar panels. We're able to power lights, a freezer, phone, a fan to keep us cool in the summer. My husband built our home and runs a small business using power tools pl ugged into our sol ar el ectric system I have a website about homesteadi ng, gardening, and off-grid living. And yes, this too is powered by the sun.

Rooftop sol ar and cormunity sol ar projects are viable, cost-effective rethods of meeting renewable energy standards and generating el ectricity in a way that is not only safe but does not violate the property rights nor does it take away the livelihood of over 250 families in northeast Mssouri.

Alternatives such as these have put people and community above corporate profit, might be considered a radi cal idea, yet consi der the wi despread lack of support for the Mark Twai $n$ transmissi on project, that the

Kirksville City Council drafted a letter opposing the Mark Twain transmission line, expressing concern for property rights and agai nst the use of eminent domin; that state representatives have gone on record opposing this project; that thousands of petitions have been submitted opposing this project so far.

Out of the dozens of testimnies gi ven at the local public hearings, only a small handful of people -- mostly Ameren's contractors -- have been in favor of this project. All of the county commissioners in the five affected projects (sic) have si gned statements of formal opposition to the Mark Twain transmission project, because they recognize that a high-voltage project is not in the best interest of the families and businesses they represent.

In light of these facts, I thi nk examining alternatives is worth a second look. Please do it. It is truly in the best interest of the public, and deny ATXI their certificate of conveni ence and necessity. Thank you for your time.
( Appl ause)
J UDGE PRI DGI N: Does the Commission have any quest i ons?

CHAI RMAN HALL: No questions. Thank you for your testi mony.

MS. PAGE: Thank you.
J UDGE PRI DG N: Okay. Thank you. Marla Murphy. Mb. Murphy, did you have anything to add fromlast ni ght?

MS. MURPHY: Just a concern for my youngest daughter.

JUDGE PRI DG N: Al I right. If you'll rai se your right hand to be sworn, please.

Mb. MURPHY: Sure will.
(Witness sworn.)
J UDGE PRI DGI N: Thank you. Pl ease state and spell your name, and then you may give your testimony.

MB. MURPHY: My name is Marla Murphy, M-A-R-L-A MU-R-P-H-Y. And I -- and my husband I own a farmin Adair County, southeast of Kirksville.

When I spoke in the meeting at Queen City yesterday, I want to add additional concerns I have about this ATXI line through northeast Mssouri. I fear for -excuse me -- my youngest daughter is now working in several counties in northeast Mssouri. She is one of only two women in the state of Mssouri who is qualified to spray crops. She has a certified driver's license and a hazardous material applicator's training license issued by the state of Mssouri.

She said her crop sprayer was 80 -feet wi de
and many other crop sprayers in the area -- in our area are up to 130 -feet wide. She al so applies anhydrous ammonia, which is nitrogen fertilizer on farmers' fields, with a very I arge applicator that is bet ween 35 and 40 feet wide. She pulls large tanks full of anhydrous ammoni a behi nd the applicator, which is considered a hazardous material and is fl ammable.

I worry what might happen if she were to come in contact with one of the steel poles or concrete foundation ATXI is planning to put up in farmers' fiel ds, where she will be working.

Many CRP acres -- the Crop Reserve Program -- are starting to be returned to crop production as the contracts run out. Mbre and more acres are going to be needed sprayed and fertilized bef ore those fiel ds can be farmed again. These fiel ds may already have trees and other objects in the way of the equi pment she uses, and now the Mark Twain transmission project will put even more obstacles in her way.

Wile she first was learning to spray crop fields, she had a minor incident with a tree or power pole. I never could quite determine whi ch. But Iuckily she wasn't harm-- hurt.

Farmequi pment is getting bi gger, as all our equi pment is twi ce the wi dth of what I was in 1972 when we
started farming. I submitted pictures of some of our tractors and equi pment at I ast ni ght's hearing. Many other farmers have even wi der and taller pi eces of equi pment than ours, since they have more acres to cover in a short amount of time. Farmmachinery will continue to get even Iarger and more expensive in the coming years as farmers try to feed the ever-growing popul ation.

An alternative would be to bury these lines, but Ameren IIlinois has rejected that idea because they say it would make it more expensi ve and would create too much heat. If they can bury these types of transmission lines in Europe, then why can't they bury them here? Besides, if they produce so much heat under the ground, then it is very likel y that we can look forward to more extreme weat her.

Hi gh temperatures and droughts like we had in 2012 and 2013 would -- if this transmission line is built, I thi nk we should consider cutting back on the use of el ectricity and conserving more.

I try to hang up cl othes outside on a line, but with a pinched nerve in my hip it has become very difficult to climb steps going in and out of my house to the cl othesline in the backyard. I watch very little tel evision, as most of the shows nowadays are not worth wat chi ng.

Yes, we all need el ectricity, but it would
be safer to come up with an alternative source of el ectricity that can be produced locally or in the area where it is needed. We don't need hi gh-voltage transmission Iines strung clear across the United States and the state of Mssouri.

I think this power line will destroy the beauty and the peaceful ness of rural Mssouri, put peopl es' health at risk, and I knowit will destroy the Iand my husband and I have worked hard to pay for and our daughters hope to inherit. Please grant us the freedomto farmas we have for over 50 years and want to continue doing for as I ong as God will let us remain on this earth. Please deny ATXI permission to build this high-voltage transmission I ine.

And I just read the ot her day -- I don' t have a copy of it -- that Mssouri and 20 other states are sui ng the federal EPA because of the carbon restrictions they are putting on power plants. If that gets stopped, the coal-fired plants should not have to be shut down. I just read it in a local paper the other day. Thank you.

J UDGE PRI DGI N: Thank you for your time. CHAI RMAN HALL: No questions. Thank you. (Appl ause)

MS. MURPHY: It will run diagonal through our property too. I wanted to make a point to say that,
si nce you're new. Thank you.
J UDGE PRI DGI N: Thank you. Brent Coursey.
If you'll rai se your right hand to be sworn, please.
(Wtness sworn.)
JUDGE PRI DG N: Thank you, sir. Pl ease
state and spell your name for the court reporter, and then you may testify.

MR. COURSEY: Yes. My name is Brent Coursey, B-R-E-N T C-OU-R-S-E-Y.

Well, I want to tell you a little bit about myself. I'ma computer engi neer by trade, an entrepreneur by practice. We came from Texas via South Carolina. We sol d a resort in South Carolina in 2006 and we came to M ssouri be- - we travel ed the country in 2006 in a tour bus with our family, and we went all over the country looking at different business opportunities.

We came to M ssouri. We liked M ssouri because M ssouri stays out of your business. And so we wound up here. We had a busi ness in southwest Mssouri we sol d in 2009. And we deci ded in 2009 that -- we' ve got four children and we wanted to figure out how to take care of oursel ves.

We' d never done farming before. We bought a farmin northeast Mssouri in Adair County -- 74 acres. We have run cattle. We' ve got organic strawberries. We' ve
done tomat oes, chi ckens, sheep. You name it, we' ve done it.

And so -- the other part l want to tell you about that I think is a vision for the future: We bought our farm-- it was an Amish farm and it had no el ectricity in it. And we have deci ded that we would not hook up to the grid; that we would figure out as a family how to live a normal life like all of you guys on the Commission with wi nd and sol ar power.

We installed -- in Decenber of 2009, we installed 2.6 kilowatts of sol ar -- or about hal f of that at the tim; we added a little bit later -- and 1 kilowatt of wind. And we have lived that way for five years on wind and sol ar power.

We have a normal house. We have el ectric pl ugs like you have. We have lights. We use computers. We have a front-loadi ng washing machi ne. we have two refrigerators. We do everything that everybody el se does. We even have an air conditioner downstairs.

And so the vision that l have for power is everybody tal ks about big transmission lines and coal-fired pl ants goi ng bad -- goi ng down, pushi ng power across our state fromwind farmฐ in lowa and Nebraska, out east.

I think the real sol ution is to keep it Iocal. If you take a look at what happened when Ameren
opened up the sol ar rebates -- I was invol ved with selling sol ar at the time, and there was a tremendous amount of people that wanted, through the incentives, to put sol ar in thei $r$ house. When you add all that up, you have a power plant locally. You don't have to -- you don't have to have a grid.

When my nei ghbors down the road -- we have an ice stormand they go down, they look over at our farm and our lights are on. Why is that? Because l've got wind and solar and I've got battery backup.

So I think the real sol ution here is for Ameren to step up and put wi nd and solar locally, create a power plant locally, and quit pushing the power around. You're losing a lot of power when you start pushing power from-- wi nd power fromlowa to Pennsyl vania. How much loss do you have in that line, pushing it over there? I woul d rather see the money that Ameren spends spent on gi ving incentives to people to put it on their roof or --
(Appl ause)
MR. COURSEY: The second thing I want to say before I go is we currently have our farmfor sale. I'man entrepreneur and we're moving on. So we have our farmfor sale. And we' ve had -- it's been for sale for a year and a half, all during this project.

We' ve had several prospects come to look at
the property. And we have to disclose that there's a possi bility that this huge transmission line will di agonally cut through our property -- about a quarter of an acre, in case you want to ask -- or -- yeah, a quarter mile, I guess it would be, of our property. And those peopl e have left. They' ve deci ded they did not -- no Ionger wanted to be a part of a property that would have a power line on it. So that's my testimony.

J UDGE PRI DG N: Thank you very much, sir.
Any questions?
CHAI RMAN HALL: No questions. Thank you for your testi mony.
( Appl ause)
JUDGE PRI DGI N: Brian Thoms. If you'l। rai se your right hand to be sworn, please.
(Witness sworn.)
J UDGE PRI DG N: Thank you, sir. Pl ease state and spell your name for the court reporter, and then you may testify.

MR. THOMAS: Yes. Hi. My name is Brian Thomas, B-R-I-A-NT-HOMA-S.

Thank you for being here and taking the time to listen to us for the past three days. I live in -- with my wife and two young children on a beautiful piece of Iand in Adair County, with woods, pasture, a pond, gardens.

We're starting to rai se dai ry cows, sheep, chi ckens, ducks, pi gs. And the Mark Twai $n$ transmissi on project would cut through a corner of our property, diagonally.

I am whol eheartedly agai nst this project -agai nst it al ong with mei ghbors, agai nst it al ong with the hundreds of others al ong this line and their nei ghbors and their friends and family. I'magainst it al ong with our county commissioners, and l'magai nst it al ong with the Kirksville City Council; against it just like any American citizen would be when faced with an unwanted taking and destruction of their Iand.

We Iive in what I think most of us would consi der a just society. We respect our nei ghbors. We don't hurt one another. We don't steal. And very occasi onally when something is in the over whel ming public greater good, the use of eminent domin is justified, but this is rare. But here we have a huge project set to destroy a great swath of $M$ ssouri homes and farmand, and it isn't a public project.

ATXI is an out-of-state, private corporation set to make millions of dollars of f the seizure of our property, and yet here we are. It seems crazy, yet you're here to decide if they should be able to do this and seize for our land for their financial benefit. That sounds kind of like stealing to me.

UNI DENTI FI ED SPEAKER: Yeah.
MR. THOMAS: So as our Public Service Cormi ssion, I want my testimny to reaffirmand remind you of the multitude of stories that you' ve heard over the past few days, and remind you of the people you' ve seen at these heari ngs.

Remenber the frightened nothers worried about the health risks to their child, the farmers losing their rich, fertile farmand, the century farms whose serene beauty has been in M ssouri families generation after generation, threatened to be taken; young families seei ng their dreans of taki ng over their family farmouse dashed.

Agai $n$, thank you for bei ng here. You' ve read and will read our testimmies. And l urge you to remember our faces. Look at the sea of good, honest people who are scared and worried and sad. Remember us and make the right decision for Mssouri and deny ATXI the approval they seek. Thank you very much.
( Appl ause)
J UDGE PRI DGI N: Mr. Thomas, remai $n$ for any questions.

CHAI RMAN HALL: No questions. Thank you for your --

J UDGE PRI DG $\mathrm{N}: ~ A l l$ right. Thank you.

Paul Mbore. If you'll raise your right hand to be sworn, please.
(Witness sworn.)
JUDGE PRI DG N: Thank you, sir. If you woul d please state and spell your name for the court reporter, and then you may then testify.

MR. MDORE: It's Paul, P-A-UL, Mbore, MOOR-E.

And I'mhere toni ght to offer my support to -- for this project. We' ve got some concerns about the coal-fired plants being retired, and I thi nk we're going to be in a real pickle here real soon if we don't get a way to transport the wi nd energy across the nation and this thing could be a two-way street that could be al so bringing power from the east back through this area.

Thi s project is going to provi de meani ngf ul jobs in the region. There's al ready a big novement in Iowa and IIIInois, Ohio and Indi ana, to -- this is all going to be linked toget her and it's really going to hel p reliability of our system

It's going to have a positive local impact on the busi nesses here during construction -- the hotels, restaurants, trucking, concrete, limestone. Everybody -fuel. There's going to be just a lot of opportunities to hel p get this thing -- hel p with jobs here in the area.

It's going to be an increased tax base for the schools in the district that l'msure they need. And, I mean, it's going to be -- it's al so a business opportunity for -- due to the increased power that's going to be in the area.

And one of the bi ggest items at the bottom Iine: It's going to hearten the area. It's going to offer additional power opportunities in case the system would go down somewhere. Thank you very much.

J UDGE PRI DGI N: Thank you. Any questions? COMM SSI ONER RUPP: I di dn' t cat ch your name.

MR. MDORE: Paul Mbore.
COMM SSI ONER RUPP: Thank you.
J UDGE PRI DGI N: Anything further? Thank you.

Curt -- I don't remenber if it's Piesman or Pi seman. And I believe you testified Iast ni ght?

MR. PI SEMAN: I di d, and I have not hi ng new to add.

J UDGE PRI DGI N: Thank you, sir. Evonne Baker. If you'll rai se your right hand to be sworn, pl ease.
(Witness sworn.)
J UDGE PRI DG N: Thank you. Pl ease state and
spell your name for the court reporter, and you may then testify.

MS. BAKER: Evonne Baker, E-V-ON-N B- A-K-E-R.

My family is going to be doubly impact by this hi gh-voltage Mark Twain line. The line al most crosses my driveway, and then it follows up besi de the two homes that my husband and I live in and my son and his family Iive in, overlooking a Iake. This is our Iake. This is our houses. And this is the line.

I have two maj or concerns. There are some studi es out there that talk about heal th risks for the heart and cancer, both of whi ch my husband and I have al ready battled. So we really don't want to be living next door to this high-voltage.

Secondly is the decrease in our property val ue. We will lose a mimum of $\$ 250,000$ to the val ue to our property, even if l can find a buyer. I have sold real estate for the past 34 years. And it will have a maj or i mpact on an apprai sal on our property. Don't get me wrong: I love el ectricity. And it comes into my property under gr ound.

Now, let's move a few miles south, to our farm Our farmhas been in our famly over 75 years, and we currently maintain it as a wildlife ref uge. The same

Iine comes in on the southeast corner, exits on the northwest corner of the center, 80 acres of our farm This is our farm This is the 80 acres. This is the power Iine. It crosses di agonally across our open Iand, which previ ously was in row crops.

Over the past several years we have enrolled in the CRP program We have annual requi rements that we have to do to our Iand for the CRP qualification to recei ve our payments. We have to -- we have planted basically warm season grasses.

We have entered into a burn program with the Conservation Department. They tell us because of the hi gh-voltage of this power line, we will not be able to mai nt ai $n$ our I and, and ther ef ore we cannot qualify for the CRP payments.

If we would enter into an agreement with Ameren Illinois, we would have to repay all of the moni es we' ve recei ved over the past several years. We cannot do that.

Last but not least is it will have a great i mpact al so into the val ue of our farm and it will be decreased by a minimu of 50 percent in property val ues. Now, we are planni ng to leave that to our grandsons. So I ask that you deny this request. I do thank you for your time.

EA- 2015-0146 - VOL. 4
( Appl ause)
J UDGE PRI DGI N: Thank you. Any questions?
MR. WLLI AME: If I might.
J UDGE PRI DGI N: I'msorry. Mr. Willians.
MR. WLLI AME: Ma' am you had a couple of documents whi ch you indicated were houses and some Iand. Wbuld you like -- if you'd hand themto J UDGE PRI DGIN reporter.

MS. BAKER: Here you go.
J UDGE PRI DGI N: Thank you. And Madam Court Reporter, l'msorry, what number are we on?

COURT REPORTER: l'Il make these both Number 4.

J UDGE PRI DGI N: Thank you very much.
( WHEREI N, Exhi bit 4 was marked for identification.)

COMM SSI ONER RUPP: Excuse me, miss. I have one for her. Evonne -- Mb. Baker --

MS. BAKER: Sorry.
JUDGE PRIDGIN: That's all right.
COMM SSI ONER RUPP: What does the CRP programstand for?

MS. BAKER: Conservation Reserve Program and it is a federal programthat we have an agreement with the federal government. And they are ten-year contracts,
so we're in probably about the third ten-year contract.
We have to -- it's a -- it's to stop erosion and for habitat -- wildlife habitat. So we plant certain plantings. We have to maintain it. We are inspected by the ASCS office and al so the conservation to qualify for the annual payment.

COMM SSI ONER RUPP: Thank you.
J UDGE PRI DGI N: Al I right. Thank you.
Warren Brown. If you'll rai se your right hand to be sworn, pl ease.
(W) ness sworn.)

JUDGE PRI DG N: Thank you, sir. Pl ease state and spell your name for the record, and you may then testify.

MR. BROWW: War ren Brown, W A-R-R-E-N
B- R-O W.
I did cone here today to tal $k$ about the need of this project, however, I would like to talk about the direct benefits for many Mssouri families. l've lived my whole life in Mssouri. I grew up on a farmin St. Clair, Mssouri, where my two brothers and l still manage our 300 acres in our spare time. I went to school at the Uni versity of Mssouri-Rolla, obtai ned my engi neering degree, and went to work for a company called Hubbell Power Systens in Centralia, Mssouri.

At Hubbell we manufacture a wi de variety of products for the el ectric utility construction. And on thi s transmissi on project, we currently supply insul at ors and hardware that attach the conductor to the structures al ong with anchors, connectors, lighting arresters, switches, and a variety of other products within the substation, much of which is manufactured at our Centralia facility.

And Centralia is a small, rural comminity just southeast of Mbberly. We have about 3,500 people there. And we empl oy 70-- 750 people in our operations. The success of our company and this community is driven I argely by the investments in projects like this, and so it is easy for me to support this project when you see the direct benefits to so many families in our commity.

On a personal side, the labor benefits of this project create needed demand. My ol dest brother lost his job during the last recession after spending his whole career working at Chrysler, when they closed thei r Fenton facility in Mssouri, here.

At 40 years old he deci ded to become a utility lineman, went to lineman school, graduated the top of his class, and then had to wait al most two years bef ore joi ni ng the local uni on as an apprentice. And this was all due to lack of project work here in the state.

But I amproud to say after three and a hal f years, he has had steady work, much of whi ch has been working on Arreren projects. And next spring he will become a journeyman lineman. I cannot tell you the peace of mind that this has brought himand our family, as we have wat ched himstruggle to support his wife and two kids during this transition.

So these invest ments and these projects like this bring needed benefits and job security to many families in our state, both directly and indirectly. So, again, it's easy for our family to support this project.

To the Iandowners and those directly i mpacted here in the room l know these are challenging situations, and especially as a fellowlandowner, we definitely empathize with you and what you're going through. However, if this project is approved and constructed, let me be the first to say on behalf of one family, among many: Thank you.

J UDGE PRI DGI N: Mr. Brown, thank you. Any quest i ons?

CHAI RMAN HALL: No questions.
J UDGE PRI DG N: Al I right. Thank you. CHAI RMAN HALL: Thank you, Mr. Brown.

J UDGE PRI DGI N: Rodney Pitford. Rodney Pitford. No? Glenn Wehner. If you'll rai se your right
hand to be sworn, please.
(Witness sworn.)
J UDGE PRI DGI N: Thank you, sir. If you woul d please state and spell your name, and then you may testify.

DR. WEHNER: Dr. Gl enn Wehner, G-L-E-N-N WE-H-N-E-R, Ph. D. My address is at 22533 Spencer Lane that resi des just east of the bypass of 63 , south of 6 . And probably of anybody in the room l am-- a handful of us are most hi ghl y affected.

As the crow flies, l'mabout four to five hundred yards fromthe Zachary station. The north line goes al ong my property fromthe Zachary station, within, agai $n, 400$ yards of $m y$ house, and it went across my property on the south. I currently have a transmission Iine from Ameren that runs north and south across the property line on the west side, sol already have this. My -- I'mgiving you my bona fide easement.

I have a Ph. D. fromthe Uni versity of Tennessee, have been instructed and done research at Oak Ridge, sol'mfamiliar with EMFs. I teach here for 34 years in beef cattle science. l'man ani mal nutritionist by trade. I have worked with lactation and animal breedi ng. And, agai n, the thing that we have to keep in mind -- there have been a lot of points, and l just wanted
to clarify a few.
In terms of what goes on and people working under the lines, that's fine. That's a couple hours a day -- ei ght hours a day. We will be living under these lines 24 hours a day, seven days a week. There is a difference in terns of exposure with anything. Two aspirin takes care of headache. One baby aspirin, 81 milligrans, hel ps take care of heart attack. Two bottles will kill you. And so, agai $n$, it's the exposure that l think we have to look at.

In terns of the jobs, l'm not so awf ul sure about that. Recently, I was going back home to Ohio to visit my nother-in-law. We happened to stop for di nner with my wife, you know, in lllinois. As we went in, there were several trucks and the gentlemen who were standing behi nd me were tal king about working on the Ameren line in central lllinois. The gentleman they were tal king about was a local, and their indi cation there was that they were following the line.

If you're looking at the businesses, it is short gain, short-term Sure, we'll sell some concrete, some rock, those ki nd of thi ngs. But, then agai n , that benefit is gone away. We're going to be living with these lines. There is dangers to those.

And, agai $n$, the transmissi on line that we' re tal ki ng about, and the ability that they have indicated
that they could increase the voltage whi ch would increase the danger. Agai $n$, I speak agai nst this line as one that's hi ghl y affected. Thank you.
( Appl ause)
J UDGE PRI DGI N: Thank you, sir. Any
questions?
CHAl RMAN HALL: No questions. Thank you.
J UDGE PRI DGI N: Al I right. Thank you very much.

DR. WEHNER: Thank you.
J UDGE PRI DGI N: Chl oe Jackson. Mb. Jackson, do you have anything to add from what you' ve al ready testified?

ME. J ACKSON: l've onl y read for ot her peopl e. I haven't done my own testimng.

J UDGE PRI DGI N: All right. Then I see you'd rather your testimony affirmed; is that correct?

MS. J ACKSON: Yes.
J UDGE PRI DGIN: Al I right.
(Winess affirmed.)
J UDGE PRI DGI N: Thank you. If you woul d, pl ease state and spell your name, and then you may gi ve your testimony.

MS. J ACKSON: Chl oe J ackson, C-H-L-OE J-A-C-K-S- O-N.

Recently, Ameren began running ads on Truman's radio station. They paid large suns of money for this to be done, of course. And the ad goes something like this: The Mark Twain transmission project and Ameren are good for Mssouri, and Ameren is a proud partner of KTRN.

I was torn between wanting to laugh at the absurdity of this statement and the Iength Ameren is going to in an attempt to convince us that this line is a good idea, and cry because l've heard the stories of those of you affected and can't comprehend how this statement, "This transmission line is good for the state" can be made honestly.

I want to make it clear that I'ma Truman student fromthe suburbs of the Kansas City, and I am not directly affected by the line. I could concei vably do my work, get my degree, and leave this community, much like Ameren can come in, build this line, and then leave and forget about the consequences.

There are hundreds of organizations l could get invol ved with on campus that l could then add to my transcript or resume, but l chose to root myself in the cormunity of northeast Mssouri because the cause of Nei ghbors United struck a chord in my heart.

I've been attending the metings since they began a little over a year ago. After the first few, when

I was getting to know peopl e's names and stories, I became very frustrated, and I still amtoday. I'd ride my bike home after the meetings and ask myself and my roommates, "How is this legal? How is this happening? And how is this right?"

We' ve begun using candl es more and more, and wal king around our house in the darkness because we don't want to pay Ameren even one extra cent knowing what pain they're causing in the lives of our rural nei ghbors.

The di srespect with whi ch Ameren has treated I andowners, especially at open houses, is di sgraceful. Even when I, a 21-year-old, curious college student, asks questions, l was treated as if my concerns were a farmer's -- people living of fthe grid and wildife are unnecessary and ridiculous. I've attended all the PSC hearings in the past two weeks, and I've heard hundreds of testimonies of those agai nst the line and a few in support of it. I have several questions.

Can one- to two-year construction $j$ obs that may or may not be taken by local people out wei gh a lifetime of cancer and suffering, and even one child with leukemia?

Are corporations' profits more important than a speci es like the Indi ana brown bat, or bunbl ebee?

Does some extra tax revenue for a city make up for the destruction of the cherished history of century
farns?
And how is it okay that people living without el ectricity and off the grid have to suffer from the consequences of people using el ectricity hal fway around the country?

Ameren and the PSC, I look at you with the full belief that you're a corporation and commission are run by human with hearts and minds, just like the hearts and m nds of those in the people in this sea of red.

And I have to ask how you are not moved by the stories you' ve heard, of Julia Jack-Scott and the baby she carries? Of the Hollenbecks and how thei $r$ bees and thei $r$ busi nesses have suffered? As with my breakfast, l stir their honey stirred in my oatmeal in the morning. Of my Iandlord, Wal do West, who was read for earlier, is one of the kindest landl ords l've ever met, and of the countless farmers whose land has been passed down from generation to generation.

These are the things that matter, not Ameren's bank account. This is not just a question of economics or convenience. This is a moral question that sever el y impacts people's lives and livelihoods, not to mention many creat ures and plant life that would suffer from the construction of this line.

I graduate in May. I plan on dedi cating my

Iife to activismlike this. I don't mind because I think it's the right thing to do, but l often wonder how our country got to this point. Twenty-somethings like myself are often called idealistic and unrealistic, but l'd love if someone could point out to me how putting the health and well-being of humans and the planet above corporate profit is just a college kid's dream

UNI DENTI FI ED SPEAKER: Yeah.
( Appl ause)
MS. JACKSON: I hope to have a family
someday. I hope to have woodl ands and gardens and I ive without el ectricity. I hope to have healthy children. But I worry about the kind of world they'll grow up in, a world, a country, and a state where corporate profits seem to outwei gh people and the environment in the eyes of our governi ng bodi es.

Wen I imagi ne my future of looking out at a garden with family and friends, swiming in a pond nearby or taking a hike, I do not imgine a 345, 000-volt power Iine in the picture, and I'msure the people in this room don't either.

To conbat Ameren's radio ads with a college student's budget, I made signs last week for a table my friend Kaitlyn and I had in this very building to provi de information about this issue to Truman students. With the
hel p of a coupl e peopl e from Nei ghbors United, I was able to come up with a few slogans. They read: People power versus corporate greed; peopl e over profit; and no eminent domai n for corporate gai n .

Wth my amateur art skills, l tried to make the "A" in corporate look like the "A" in Ameren's logo. । hope Ameren doesn't sue me for that like they sued the PSC.

The I ast sign, however, was a bit si mpler than this. It read: Please deny ATXI, and that's what I ask you to do today. Thank you for your time.
( Appl ause)
J UDGE PRI DGI N: Any questions?
CHAI RMAN HALL: No questions.
J UDGE PRI DGI N: Rodney Pitford. If you' II rai se your right hand to be sworn, please.
(Witness sworn.)
J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and then you may testify.

MR. PITFORD: My name is Rodney Pitford. It's spelled R-O-D-E-Y P-I-T-F-OR-D.

I amthe ouner of OTG Sol ar out of Macon, Mssouri. The Ameren line doesn't directly affect me and my property. I ama property ouner, however. I cane from Col orado. I grew up in Macon as a child. I was living out
in Col orado and one of these big transmission lines went through really close where we were. I do know all of the eye sores and the different arguments that people are showing here.

But my reason for speaking toni ght is because l believe that Ameren has not exhausted -- has not exhausted all the vi able sol utions out there. I have to believe that we can meet the demand with rooftop sol ar. Mbre sunlight hits this earth than could -- to run the earth's -- the demand for earth for a year on energy. So as far as not collecting it, that's the fault of $j$ ust not doing it.

Ameren had a great rebate program going on and was really pushing this. We put in -- personally oursel ves, we put in more than a megawatt of power in 2013 al one, and that equal s out to about two -- the amount of power that's been installed in -- on Ameren's line, if you just go by rebate numbers, it's more than 200 megawatts of power in one year, guys. I mean, this is a big number. So a 400-megawatt power line that's needing to be put in is very obtai nable.

I thi nk without the rebate -- when it went away, I thi nk that it was definitely a crush to the sol ar community, but l would personally like to see that sol ar is explored better. I do believe that people can do it. This
is an option that even though Ameren did pay a rebate in the I ast couple of years, we have been seei ng homeowners still putting this in on their own. And this is affecting power.

Ameren doesn't need this demand met.
They're doing it on their own and that's hel ped them out tremendously.

California -- as we all know, California had an energy crisis. It is absol utely bei ng sol ved by rooftop sol ar. It's not something that we can argue on that point. I come here really to support that. I don't want to see one of these big lines go in for people that it does di rectly affect. And I just want to make sure that poi nting out to you guys that we have expl ored different options. If it's not rooftop sol ar, let's talk about somet hi ng el se.

I -- agai n, l just wanted to itinerate -- or to say that, bottomline, guys, we can do better than this for our future. The EPA is coming down hard. Instead of fighting them let's look at the future and have a better future for our kids and families. Thank you.
( Appl ause)
CHAI RMAN HALL: No questions.
J UDGE PRI DGIN: Al I right. Thank you. Bob Jackson. If you'll rai se your right hand to be sworn,
pl ease.
(Witness sworn.)
J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and then you may testify.

MR. J ACKSON: B-O-B J-A-C-K-S-O-N.
I' m Bob J ackson, I andowner, farmer, from sout hern Adai r County. I currently serve as president of the Adai r-Schuyl er Farm Bur eau. The two-count y organi zation has a membership of 1,374 families. And at our annual rembership reeting, hel d on September the 1st, a resol uti on was unani mousl y passed to oppose the Mark Twai $n$ transmissi on project.

I wi sh to speak in opposition to this transmissi on project. Fromthe perspective of agriculture production and -- pl acement of transmission lines in crop fields creates problems for operation of large field machi nery, having to till, pl ant, harvest around large towers whi ch are obstructions in the fields.

Compaction and distribution of -- and di sturbance of the soil as a result of the construction process of the transmi ssi on towers, as construction equi prent will affect the productive capability of the soil, the structure of the soil will forever be damaged. This proposed project will affect 55, 000 acres in five
counties, and will impact and reduce food production on that soil.

Shoul d the project be approved, the maintenance of these towers and Iines will continue to create probl ens of soil compaction and alter the soil structure and destroy the exi sting annual crop production.

This project would have detrimental effects on a -- have detrimental effects on approxi mately 18 to 20 acres per mile, and have a large impact on the soil productive capabilities for future food production.

Aerial application of the chemicals and nutrients for crops and pasture production would be eliminated as a management tool utilized by agriculture producers. Mbdern technol ogy such as GPS, or gl obal positioni ng systens, are a standard tool in today's modern farm equi prent.

The el ectronic treatment frequencies from the electrical lines will change or possibly interfere with GPS transmissions, therefore altering the efficiency of farming techni ques.

Another concern of mine is use of ement domain by private companies. In a meeting this past spring, I was visiting with ME. Peggy Ladd, director of Ameren transmission stakehol der rel ations, and she stated that Ameren UE is a private stock company hel d by -- held
by the stockhol ders. It is not a public utility. She could not confirmthat Mark Twain transmission project would serve Mssouri Ameren UE customers.

It is my opinion that Mark Twain transmission project does not serve Mssouri citizens and I would certainly encourage the state -- M ssouri Public Servi ce Commission to deny the permit requested. To approve em nent domain for a project like this is unwar ranted and unj ust. I would answer any questions and thank you for your consideration of my remarks.
( Appl ause)
J UDGE PRI DGI N: Mr. Jackson, thank you, sir. Conor Hughey.

COURT REPORTER: Judge, he gave me hi s remarks as 5.
( WHEREI N, Exhi bit 5 was marked for identification)

JUDGE PRI DG N: If you'll rai se your right -- excuse me. If you want to raise your right hand to be sworn, pl ease.
(Wtness sworn.)
JUDGE PRI DGI N: If you'll please state and spell your name for the court reporter, and then you can gi ve your testi mony.

MR. HUGHEY: My name is Conor Hughey,

C-ONORHUGHE-Y.
I would like to first speak on behalf of Mr. and Mrs. M ke and Mary Conl ey. They have to say that their family opposes the MTTP on many level s, for many reasons -- the Mark Twai $n$ transmissi on project, of course.

Primarily, they fail to see the need for the project when compared to the costs and the danages to the I and and farns al ong its route. It's unclear if and when wi nd farns or other power sources will be devel oped. If so, will they benefit the landowners and citizens in its path who stand to lose property rights and will have to deal with the effects of high power transmission lines?

They have hunted for 25 years on a farmin Knox County, whi ch would literally be cut in half by the project. The final route will actually pass directly over three stand sites on this beautiful family farm They own a small farmin Putnam County that will at least be ten miles fromthe route, but the project will have the same effect on the farms in this area.

Save the use of eminent domin for projects with a tangi ble benefit for the residents of Mssouri, they say. The Mark Twain transmission project looks more like an investment for Ameren than benefit for the public.

Next, I would like to read my own statement. I'd Iike to al so point out that I amnot directly affected
by the construction of this line. I, myself, amfrom St. Loui s, M ssouri. But the inf ormation regar ding this project has had a si gnificant impact on my outlook regarding corporations such as Ameren.

First of all, the testimonies by some of the Iandowners present here today say that they were offered a one-time easement. On Ameren's site they claimthat they will "make the Iandowners whole" by fully compensating them for any effect on the market val ue of their property caused by the imposition of easement of power lines.

I would like to ask: How can they do this by offering payment bef ore the Iandowners have sol d thei $r$ property? It is not up to Ameren to deci de the val ue of the I and and the livelihoods of the affected people. How does cutting through people's property with an eye sore to the naturalist of the I and make them whol e?

The Iine is slated to run fromthe Iowa border to Pal myra, M ssouri, according to the information on Ameren's website. Ameren Transmission Company, al so known as ATXI, is the an IIIinois-based company. So why does the info not make mention of where the line goes beyond Pal myra?

Thi s is assuming that ATXI has its interests
-- has in its interests the construction of lllinois infrastructure, but this is irrel evant. ATXI is
subor di nate to the $M$ dwest I ndependent System Operat or, or MSO as it's known, who operates in the western portion of IIIinois as well as Mssouri. However, Eastern Regi onal Power Cooperative, PJM al so shares IIlinois power with M SO.

And I empl oy you -- and I implore you to consi der the question of how much the actual power Ameren predi cts they will transfer will benefit energy rates for Mssouri consumers, and how much of the power will be wasted in the procedure of transmitting it to other states and beyond.

In speaking with some of the representatives of Nei ghbor United -- Nei ghbors United, I have come to interpret that one primary reason for their opposition to the Mark Twain project is due to Ameren's failure to provi de adequate information to many Iandowners who would be affected by the line. And at this point l'd like to ask a question to the audi ence. And if you' re confortable, pl ease stand up.

How many people here right now are part of the Amish or Mennonite commity?
l'd like to let that speak for itself.
Wthout such voices, not all people are being adequately represented here. Is it right to take away Iand frompeople who have little to no know edge on
the subject? I don't have to speak on the noral aspect of this project. The ki nd fol ks who have spoken before me shoul d make that evident. Thank you for listening.
( Appl ause)
JUDGE PRI DG N: Thank you very much. Dan Whal en. If you'll raise your right hand and be sworn, pl ease.
(Wtness sworn.)
J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. WHALEN: Dan Whal en, D-A-N WH-A-L-E-N.
I'mwith Hanson Professional Services, Incor porated, a consulting firmwith a Mssouri office that provi des servi ces to Ameren for over 40 years. We have not provi ded services rel ated to this specific project, but we do hope to be able to bid on this project just as we will to provi de services on other infrastructure projects in the area and in the region.

My comments are based on over 25 years of personal experience working with Ameren on a wi de variety of projects. In addition to the construction of mai nt enance crews, engi neering, scientific, and techni cal service will al so be bringing some revenue to the area.

We would anticipate 20 to 30,000 man hours
rel at ed to land surveying, envi ronmental revi ews, site reconnai ssance prior to final pole placement and line design, geotechnical engi neering and soil pourings; al so foundation quality assurance and quality control, in addition to what the previ ous contractors have spoken to.
l'd al so like to share that based on my 25
years of experience on Ameren projects that they strive to be a good corporate citizen and take the responsibilities for envi ronmental stewardshi p very seriously. They meet or exceed regul at ory requirements. Our company has been invol ved with envi ronmental revi ews, hel ping to make sure that impacts of wetlands, threatened endangered species and cultural resources are minimed and mitigated.

During construction phase, as some of the contractors that have testified can attest, Ameren is very strict when it comes to erosion control, storm water pollution prevention plans, and safety.

I know many of the affected Iandowners are busi nessmen and women, and I can al so speak to my experience with Ameren as a business partner. They negotiate fairly and follow up with what they say they will.

Concerning local impacts on infrastructure due to their projects, we are al so working with Ameren on row monitoring and repair and local rei mbursement on
several of thei $r$ transmission line projects. They don't wal $k$ away fromtheir responsibilities. In my experience they do what they say they will do.

That's all l have.
J UDGE PRI DGI N: Thank you. Any questions?
CHAI RMAN HALL: No questions. Thank you for your testi mony.

J UDGE PRI DGI N: Thank you. Lu Nel sen. If you'll raise your right hand to be sworn.
(Witness sworn.)
J UDGE PRI DGI N: Thank you. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. NELSEN: Yes. It's Lu Nel son, L-U N-E-L-S-E-N.

And I work for the Center for Rural Affairs. We're a non- profit based in Lyons, Nebraska. So I'm not from around here. I'mnot affected by the line. But we work on a lot of energy policy issues at the center, across the M dwest and the Great Plains, and one of those issues is transmission.

And one of the reasons why we work on transmission issues is because we believe that transmission and upgrading the transmission grid is an essential piece of rural devel opment and taking advantage of our rural
resources and capturing the benefits for rural communities that taking advantage of those resources can del iver.

And we' ve seen in numerous instances that Iack of sufficient transmission can severel limit the ability to devel op rural energy in rural commities where all these benefits would be wel cone.

But while we do believe that transmission and updating the grid and building out-connections through renewable energy is incredi bly important, we al so believe that it's essential that local communities and Iandowners have a say in the process, and that devel opers like Ameren work incredi bly hard to address those concerns and work with Iandowners to identify the sol utions for those issues.
 in multiple states. l've seen a lot of examples where everyone coming to the table has probably a lot of benefits. It's hel ped to address these issues. And I guess, in cl osing, we support the grid, but we thi nk it's essential that commity members' letters have their say in the project.

J UDGE PRI DG N: Al I right. Thank you. Any questions?

CHAI RMAN HALL: No questions. Thank you.
J UDGE PRI DG N: Okay. Thank you. Clifford Hollenbeck. And have you testified before, sir?

MR. HOLLENBECK: No, I haven't.
J UDGE PRI DGI N: Al I right. Thank you.
MR. HOLLENBECK: I'd like to be affirmed, pl ease.

J UDGE PRI DGI N: Absol utel y .
(Witness affirmed.)
JUDGE PRI DGI N: All right. Thank you. If you will, please state and spell your name for the court reporter, and you may then testify.

MR. HOLLENBECK: My name is Cliff Hollenbeck -- or Clifford, C-L-I-F-F-O-R-D H- L-L-E-N-B-E-C-

I'ma resident of Adair County. I have been all my life. l'm 55 years old. I live on my family farm I'ma commercial beekeeper. My wife testified last ni ght. I do have studi es that I'd Iike to submit toni ght concerning EMF and honeybees.

I know Ameren likes to say that, you know, EMF are great for everybody, incl udi ng the bees, but I think we all really know better; that there are studi es -in fact, there are actually studi es that power line compani es -- you know, power compani es have funded that seens to have just a little bit of truthful information to them They don't have very much, but there's alittle bit you can glean fromthere.

But l've had experience with honeybees since
1973. I was 13 years old when I started keepi ng bees as a hobby. Later in years, I became a commercial beekeeper. I've been commercially keeping bees for over 20 years, now. My wife and me run Hollenbeck Honey Farm Kirksville, M ssouri.

I can just probably about tell you everything there is about a bee -- a honeybee, and I don't say that braggingly. But when I was a kid, that's all I ever thought about. I had trouble with studi es in school -- you know, my social studi es and those things because honeybees was on my mind. And l'mstill that way to this day. I understand honeybees, and that's one reason why I've been very successful in the business that lam

And exposures to bees -- to power lines, I've had experience with them not under $345,000-$ volt Iines, of course. I think probably the hi ghest one that । have -- had any experience with was probably l would assure 60, 000.

We had to move those bees fromout from under those lines. Those bees were there for about three years. I kept attributing the problens we was having with these bees with maybe crops -- you know, pesticides and stuff. You know, you don't al ways know what's going on, you know, with ani mals and stuff. Sometimes you've got to figure it out. But after a certain anهunt of years, we
began ki nd of putting things together about the bees acted a little bit different than they didin other locations. And one of the studi es that I show -- will show here, it tal ks about bees. It's underneath power lines. And it says produces bee di sturbances, increases mortality, abnormal propolization, and possible impairment of col ony growth.

You know, I know you guys don't understand bees, but, you know, really, what that just boils down to is honeybees don't do what they normally do, you know, in the natural. And in working with bees, I guess I ama nat uralist in some ways. I do use pestici des, believe it or not, even though I have honeybees.

And I do love el ectricity, but -- these bees, they don't performin the same function. The queens -- which is the life of a col ony -- they do not lay as well. They're superceded, whi ch actually means the bees replace thema little bit more often from-- you know, than they normally would.

Normally the life of a queen is about one and a half to two years. Underneath a power line, I mean, they were superceding these queens probably every two or three months. I mean, just -- and when they supercede, it keeps the bees' pollen -- you know, their population from building up like it should be, and population is key to
honey production in our busi ness.
Li ke I say, l can go into a lot of different details, but, you know, my wife and me run an operation in three different counties. Two of these counties is going to be affected by this power line. Several different yards -- we' ve got a total of al most 30 yards of bees in these counties, 30 different locations. We're going to be severely impacted on this. And to top it all off, the substation is on my road, next to my land.

And like I say, I've lived there all my life. My dad and momlived there all their life. My granddad lived there all his life, and his dad before him This land has been in this family since -- some of it since 1847. And I can tell you right now. There isn't anybody goi ng to take my Iand away. I don't care whether thei r name is ATXI or what.
( Appl ause)
JUDGE PRI DG N: Al I right.
MR. HOLLENBECK: I guess if I have any time left, l'd just like to say, man, l'mso proud of all these peopl e out there that -- these are my nei ghbors. Thank you.

J UDGE PRI DG N: Thank you.
( Appl ause)
( WHEREI N; Exhi bit 6 was marked for
identification.)
J UDGE PRI DG N: ME. Hol I enbeck, I bel i eve you testified last ni ght?

Mb. HOLLENBECK: Yes. I have a couple things l'd like to --

J UDGE PRI DGI N: Certainly. You may come up. If you'll raise your right hand to be sworn. I'msorry. Thank you very much.
(Witness affirmed.)
J UDGE PRI DG N: Thank you. Pl ease state and spell your name for the court reporter, and you may then testify.

MS. HOLLENBECK: Margar et Hol I enbeck, MA-R-GA-R-E-T H-OL-L-E-N-E-C-K.

We've heard several people today mention about thei $r$ land being cut across diagonally. That is al so the case with our property and my nephew s property. He has an 80 -acre stretch of property. It goes fromthe southwest corner to the northeast corner, cutting in di agonally across.

There's several ot her people that have farm -- hunting ground -- prime hunting ground cutting fromone corridor diagonally to the other corner. When prime hunting ground gets cut like that, you lose all the trees, forage for the -- for the wildlife. Numerous -- like l
said, numerous people di agonally across. Could care less what is done with our property.

The second thing l'd like to add: They keep tal king about these EMFs don't affect people; they're not any hi gher than what's in your own home. I beg to differ. My brother sprayed underneath these power lines. They took fluorescent light bul bs, stood underneath the power line, and they were illuminated.

There's numerous vi deos online that you can vi ew that they' ve done the exact same tests: Gone out there with everyday fluorescent light bul bs, stood under neath a power -- these hi gh-voltage transmission lines and the light bul bs are illuminated.

They saw-- I took a fluorescent light bulb -- because we have fluorescent lights in our house -- so l took an unattached fluorescent light bul b, went around to all my appliances they say do not put of f anymore EMFs than what our normal vacuum cleaner did. Turned my vacuum cl eaner on. Did not illuminate my light bul b. Went to my mi crowave, turned it on, did not illumnate the light bul b.

Therefore, I don't know how they can say these EMFs are not any greater than what we have in our own homes, if they do not illuminate a light bulb just like that. That's all I have to say.
( Appl ause)

J UDGE PRI DGI N: Thank you. Judy Pet erson. If you will please raise your right hand and be sworn.
(Witness sworn.)
J UDGE PRI DG N: Thank you. Pl ease state your name and spell it for the court reporter, and you may then testify.

MS. PETERSON: My name is Judy Pet erson, J-U-D-Y P-E-T-E-R-S-O-N.

Thank you for the opportunity to come and speak with you about the Mark Twain transmission Iine. My husband and I retired in 2006, and we moved back to Schuyler County. And we built our new home on the farm that has been in our family for over 70 years, a property where you can see for miles in any direction.

People who come to our home to visit us, especially fromthe city that come, talk about how beautiful it is there. It just doesn't matter which di rection you look. It's just absol utely beautiful.

The proposed line would cut di agonally across the front portion of our property, permanently destroying the view. Ameren does not care about that, but we certai nl y do. We have stated -- they have stated that it was thei $r$ intent to mimize impact by following property lines, but in testimny after testimny from Iandowners it has been reported that the lines run
di agonally across their rich farmand as well. And in many cases it literally cuts their land in half.

Our property val ues will be significantly affected forever. Ameren reports that their lines will be compatible with farming and pasture use, however, there will be a lifetime of restrictions near each one of those huge, ugly pol es. Many documented reports and articles have stated that cattle can be adversel $y$ affected by the stray voltage from power lines.

Our I and is currently bei ng leased as pasture land for the raising and breeding of cattle. asked specifically what our renter was to do with his cattle during the construction process, and I was told that we would be compensated for any moni es that we lost for rent during that time, but what he did with his cattle was his problem I don't thi nk that he's going to find that an acceptable sol ution, and we will most likely lose a long and faithful renter in the process.

We have been tol d that we would recei ve fair market val ue for our land, but there is no fair market val ue for land that is not for sale. Ameren --
( Appl ause)
MS. PETERSON: Ameren has treated us -- all of us -- with no respect, referring to us as NI MBYs -- not in my backyard -- and telling us specifically that this

Iine will go through and there's nothing we can do about it.

We asked where it was going to go once it reached the I owa line, and we were tol d that their job was to connect Point A to Point B; they didn't care who it went across; and after it reached Poi nt B, they did not care what happened. Thei j ob was to get it from Point A to Point B.

Landowners have been escorted out of public meetings by armed guards. We' ve heard toni ght how Ameren has been so concerned with working with Iandowners and trying to make it an easy process for it.

I'd like to know whi ch Iandowners they treated that way, because if you ask a question at the public meetings and it -- very few of them were answered in any way. The ones my husband and I asked they either said, "We can't answer that," or, "Answer it at the next station." You'd go to the next station and they woul dn't answer the question either.

But we have friends that were escorted out by ar med guards for asking a question about what -- about -- it was just a simple, respectful question, and they were escorted out. And this is an insult. This is an insult to us as landowners in so many ways, on so many level s.

It is our right -- it is our right as an

American to be protected fromlosing our Iand for a project such as this.
(Appl ause)
MS. PETERSON: We are fighting for our rights and for the future of M ssouri. If Ameren is granted the authority to misuse the true intent of eminent domai $n$ to condem our land, it sets a precedence for others to come in and do the same, and they will. Thank you.
( Appl ause)
J UDGE PRI DGI N: Thank you. Dui ght Peterson. If you'll rai se your right hand to be sworn, please.
(Wtness sworn.)
J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. PETERSON: Dvi ght Peterson, D-WI-GHT P- E-T-E-R-S- O-N.

I' mspeaking toni ght not only on behal f of myself but of my father and mother-in-law. First off, l'd like to thank you, Commissi oners, for hearing us out. And as you will see, my wife is mich the better speaker than I.

But l'd like to say this on behal f of my in-l aws. Thi s past week we spent the weekend, and that was the reason why I coul dn't be at last ni ght's meeting, was -- at Queen City. And that's where our -- that's closer to
our home, and that's why we wasn't there, was because we had previ ous commitment with our son, John Robert and Bonnie Dodson. Do you need to have the spelling of their names al so?

Thi s is the farmthat it is impacting, is John Robert and Bonnie Dodson's farm We was unable to make the meeting last ni ght because of a prior commitment, as I earlier said. We was out visiting our son who is a fitness commander in the Naval Academy.

Wile I was there I saw the Navy playing a foot ball garre, and it was Navy versus Tul ane. Maybe some of you have seen it on tel evi sion. I don't know whether it was brought back to this far or not, but this was in Annapolis, Maryl and.

And in this game, I saw something that sparked an interest to me that l've never seen before. I've been in the military. l'ma military veteran. But l seen a commander that l'd like to take my hat off to. The commander of the United States Naval Academy in Annapolis, Maryl and, when the Navy scored a seven- poi nt touchdown, he run out with all the cadets on the goal line.

And I don't know whether any of you have ever seen this or not. But he runs out with the cadets. Runs out, drops down. And if it's a seven- point touchdown, he does seven push-ups. All the cadets do seven push-ups
al so. But he starts it. They don't ever -- they don't ever start their push-up until he does it.

I would say that there was better than 100 cadets out on the goal line there with the commander. I was asking my son -- I said, "What is his rank?" And l'm -- in my military service l was the U.S. Army. I did not -- I do not understand the naval ranki ng systemlike he does.

So I had to ask him I said, "What is his rank, military rank of him" He said, "He's the vice admiral of the base, Dad." I said, "In Army, Air Force, and Marines, what is that?" He said, "That's a three-star general." And I said, "Oh, this guy has got some cl out there, hasn't he?" And he sai d, "Sure does, Dad."

He was the leader there. I saw some I eadership there that I would be willing to say that John Robert and Bonni e would like to ask you Cormissioners to bring forth and say no to this transmission line.

But l'mal so speaking for myself. I would like to add these thoughts too. l'ma retired construction worker myself, so l know some of these construction trades. But as you know, in the construction trades, there's al ways qui ck money to be made.

I would like to talk about an asphalt job because we had the MIIer Construction Company here in

Kirksville. And as you go by a resurfacing job, the thing that you see in the middle of the j ob is a rubber tired roller.

Thi s rubber tired roller has a special purpose. It's not put in right after the asphalt is laid, and it's not put in at the end of the job to clean up the job. It's put in the middle for a purpose, and that purpose is to get the compaction on that asphal $t$ so that it will stay.

Thi s is exactly what we're tal king about whenever you ask to bring trucks across our ground. These trucks have rubber tires on them They'll put compaction in our soil like you don't understand. There's few people in here -- maybe several; I don't know how many people is here -- my five minutes are up? l would like to end this, sir, by saying thank you. I'msorry that l've gone over, but thank you for your time. Is there any questions?

CHAI RMAN HALL: No questions.
J UDGE PRI DGI N: Thank you very much, sir.
( Appl ause)
J UDGE PRI DGI N: Dr. Margaret Wil son. If you'll raise your right hand to be sworn, please.
(Witness sworn.)
J UDGE PRI DG N: Thank you. Pl ease state and spell your name for the court reporter, and you may then
testify.
DR. WLSON: I'mDr. Margaret Wilson, M-A-R-G-A-R-E-T WI-L-S-O-N.

I ama life-Iong resident of Adair County. My ancestors were Irish immigrants that cane and settled in northeast Mssouri to look for a better life. I do own I and -- my husband and I own Iand in Adai $r$ County, but currently the path chosen by Ameren does not directly i mpact us, although we were on one of the original lines.

I want to thank the commissioners for bei ng here toni ght. I think it's really important that you are here to hear the citizens of northeast Mssouri. And we're very di sappointed that they were not here to hear those in Schuyler County Iast ni ght.

I'mhere toni ght to state that l amopposed to ATXI's Mark Twain transmission project. I amadamantly opposed to the use of eminent domin and the vi ol ation of property rights to profit a private, Fortune 500 cor poration.

I do not believe this project is in the public interest of the citizens of Mssouri. I do not believe that this line is necessary nor does it benefit Mssouri, and here's why -- some of the facts: Mssouri's energy needs actually have and are proposed to further decline over the next 20 years. This is due to a decreased
demand and a weakened economy.
Ameren M ssouri does not need this line to meet their renewable portfolio standard mandate. I attended Ameren Mssouri's public hearings on rate hi ke increases in this very roomin January.

A colleague and I approached the vice presi dent of Ameren Mssouri and asked himif they planned to use energy fromthe Mark Twain project, and he answered they did not need it; they have other projects they're worki ng on. He spoke the truth. Of course, at the time, he did not know that we represented Nei ghbors United.

Mbre facts: The local rural el ectric cooperatives are not pl anning to use the Mark Twain transmission project. There are no operating wi nd farns or proposed wind farns in Mssouri that are planning to use the MTTP.

If the MITP provi des a real benefit to M ssouri, then why did ATXI choose to sue the Public Servi ce Commission, arguing that they should be able to bypass that state regul at ory authority. And when the Mark Twain project was first proposed there was no mention of a substation in Mssouri, indicating thei real intention of provi ding strictly a pass through our state.

The Mark Twain transmission project will adversely affect, impact, or destroy nearly 300 family
farms and over 50,000 acres of farmand in northeast Mssouri. It will impede farming, make it difficult to run farmequi pment, and move livestock around the line. This project vi ol ates the Ri ght to Farmlaw.

As a physician, l al so have grave health concerns regarding the potential negative effects of hi gh- voltage lines. EMFs are known as a potential carci nogen and these types of lines have been linked to an i ncreased inci dence of chil dhood I eukemia, miscarriage, autism and other detrimental health effects.

ATXI likes to advertise that the Iocal economy will benefit fromtax revenues rel at ed to this project, but what about the negative effects on reduced I and and home val ues? Let's be real: Who wants to buy farmand that has a very high, I arge high-voltage Iine running di agonally right down the middle of it, or a house with a line of just a few hundred feet fromthe front door?

Last ni ght, at Schuyler County, you woul d' ve heard fromthe presi dent of the Kirksville School Board who said he is not aware of any revenue expected fromthis project to benefit or go to our schools.

Ameren al so says that the line will create new jobs. Well, we know it takes highly specialized crews to construct these lines. I sincerely doubt that this one-time construction will bring any significant or
sustai ned jobs to our commities.
Last ni ght and toni ght we' ve heard froma few people who are in favor of the project. They were all out-of-town contractors and linemen who would profit from this project. They don't live here. They di dn't even bother to stay and hear the testimoni es of those who do. They all tal ked about the economic revenue fromhotel s and restaurants and gas stations while the crews are in town. They did not talk about what happens when they all go hore and about the economic devastation to farmers --
(M crophone went silent and was repl aced.)
DR. WLSON: All right. Excuse me.
They did not tal $k$ about what happens when they all go home and about the economic devastation to farmers, cattlemen, and the hunting industry. They tal ked about thei r jobs, but they di dn't talk about ours, the jobs al ready here in the agricultural industry.

My opi ni on is that ATXI targeted northeast M ssouri because they believe they can take advantage of the fact that M ssouri has less strict eninent domain laws, that farmand is less expensive to purchase here than in IIIinois or Iowa. M ssouri al so has no Iaws to observe property lines. We have Iarge populations of Amish who practice a passive lifestyle and will not fight for property rights. And M ssouri does not have the "buy the
farm" I aw.
I thi nk they thought we were an easy target. ATXI, instead of upgrading existing lines or following roadways and exi sting easements, have chosen to destroy forest bl ocks, go di agonally through cropl and, and totally di sregard all our livelihoods. This line is not essential to M ssouri, and provi des little or no benefit to us. And I thi nk my husband would like to donate his time to me, if I could finish.

J UDGE PRI DGI N: You may finish. Thank you. DR. WLSON: All right. We' re extremely grat ef ul to our county cormissioners in all the five counties that are affected who are willing to stand up and do the right thing to oppose this project.
( Appl ause)
DR. W LSON: PSC commissi oners, you need to do the right thing, too, and deny ATXI the certificate of necessity requi red for this project.
( Appl ause)
DR. WLSON: This line does not benefit Mssouri, and it is your responsi bility to protect the interests of us, the citizens.

Lastly, I would like to speak to the human toll this proposed project is taking on those it will affect. I'mnot a farmer. I'ma physician. I don't know
much about crops or cattle, but I do know about human suffering. And I amwitnessing it firsthand here.
(Appl ause)
DR. W LSON: I know the pai $n$, the anxi et $y$, the fear, the grief, the loss, the human suffering occurring by those who may lose their farns, their lands, thei $r$ livelihoods, and possibly their heal th. The farmers, the beekeepers, the cattlemen, the legacy farmers whose lives, I ands and future will be forever harmed by this project.

Commi ssi oners, I would like you to look into the eyes of this -- these good people and tell me what price is it worth to take what they have worked for. To Ameren I say: You have greatly underestimated the citizens of northeast M ssouri, their intelligence, their fortitude, their tenacity and strength. They will not give up and surrender their land.
(Appl ause)
DR. WLSON: Thi s line is just wrong.
Commi ssioners, please do your job and protect us. Please do the right thing. And thank you. I appreci ate it.
( Appl ause)
J UDGE PRI DGI N: Okay. Thank you very much.
Thi s looks to be a conveni ent time to take a break. I'mgoing to try to make this pretty brief, since
we have several people who still want to testify. l'm showing it's 8: 10 on thi s clock. Let's resume at 8: 20. All right. Thank you. We're going of $f$ the record.
( Off the record.)
J UDGE PRI DG N: l'd ask everyone to take a seat, please. If l can have everyone take a seat, please. If I could have everyone take a seat, please. All right. Thank you.

Before I go on to the next witness, let me reiterate: I do have some people who have si gned up that have testified before. I would ask if you're one of those peopl e that you would consi der moving toward the end of the Iine to allow others who haven't been heard yet to testify. Then, al so, we need to wrap this up around el even o' clock. The building closes around 11:30. And we'll do everything we can to get everybody heard. As you can see, you know, it takes a long time to get this done. l'll try to get through without another break. But if my court reporter falls over, we're going to have to take a small break and gi ve her a chance to rest before we continue.

All right. The next witness is Marsha
Sal assa. I hope I pronounced that correctly.
MS. SALASSA: You did. You did beautiful.
J UDGE PRI DG N: Thank you.
MS. SALASSA: I actually had someone read on
my behalf last ni ght, but listeni ng today l -- there are some other thi ngs l'd Iike to add.

JUDGE PRI DGI N: If you' II rai se your right hand to be sworn.
(Witness sworn.)
J UDGE PRI DGI N: Thank you. If you woul d, please, state and spell your name and then you nay then testify.

ME. SALASSA: My name is Marsha Sal assa, M- A-R-S-H-A S-A-L-S-A-S-S-A.

I just want to say I amopposed to Mark Twai $n$ transmission project because of the potential harmit poses to my parents' family farm l haven't seen a lot of the next generation here toni ght. I amthe next generation of farmer. I've watched my dad work this land his entire life, and my grandfather before him l've seen the harm that it's going to do to my nei ghbors, and that it's -they' ve gone through with this process; the harmto my friends' livestock, wildlife.

My father harvests hay to feed his cattle on these fiel ds, and then grazes his cattle there. This is his job. Ameren is asking himto take a pay cut. Wbuld you like it if somebody tol d you you had to take a pay cut? I don't know too many people that would be happy about a pay cut. He's goi ng to lose the quality of I and because of
the soil impaction fromall of those vehicles that have to drive out on that field to put in those power lines. That reduces the grass that's produced on that land. If he goes to put crop in anywhere that that Iand is compacted, that crop will not growlike it does where it's not compacted.

I walk through these fiel ds to hel phimherd cattle and move hay. I fear for his well-being, my own, and that of his livestock.

Al so, I thi nk the second man that spoke read for Wal do West. My dad al so goes to that farmand harvests hay and crops for that gentleman. So it's not only affecting him where he actually works, but this is another form of income that he gets fromthis gentleman who's al so Iosing Iand to this project, so he's goi ng to further get a pay cut fromthat.

This proposed high-voltage power line would not onl $y$ decrease the val ue of the Iand, but al so productivity. The effects these line will cause will last a lifetime, if not forever, by taking out precious top soil. Whereas Wal do's land is mostly flat, my dad's is rolling hills. So you're taking out trees, grass. That's goi ng to increase erosion in areas that he's worked hard to put in things to not cause erosion, whi ch is part of the CRP project. And I don't even -- I'm not even sure -- we had some small amount of Iand that is still in the CRP.

Tornadoes have frequented this area in past years, and the damage that would done by this event would be catastrophic, if these lines were in place. If a tornado hits a -- one of these lines, you can't tell me if it crashes to the ground and there's a herd of cattle there that it's not going to kill those cattle. It's going by ponds, over creeks, over hi ghways. It's goi ng by our entire nei ghbor -- it's like going right in front of their home. There are three proposed routes. They finally narrowed it down to this one because, interestingly enough, there were churches and schools that were cl ose to the ot her ones.

So if it's not okay to go by these places with a lot of children and where people congregate, why would it be okay to go directly in front of my nei ghbor's house? Or another nei ghbor that's on down the way, who deci ded to build his home there and raise his children there?

And they say that these EMFs are not going to affect us, but they haven't even done the studi es here. The only studi es you can really find are in European countries, and they say that these EMFs do cause childhood leukemia. So if it's going to cause cancer in children, what's it goi ng to do to my dad's cow when they have cal ves?

Thi s project is not in the public interest for the state of Mssouri. It's just going through us. They never once -- Areren never once said they' ve provided anything to Mssouri residents as far as el ectricity. It's just going through. That's it.

The envi ronmental impact al one is di shearteni ng. In past years there has been a decline in wildlife such as Bobwhite and pheasant. I have seen an increase in such wildlife on this very property. Just to have thei $r$ habitat destroyed by these lines seens like such a waste.

It's not -- if it's not okay to run by the schools and churches, why would it be okay to run by someone's home where children are living? How many creat ures that we aren't even aware of will be harmed by these power lines, incl uding bees? Areren would never answer questions like these in their open houses. The entire process, they were rude, they were di srespectful towar ds I andowners, and homeowners.

I never actually heard Ameren answer anyone's question. They just kept pushing you fromone table to another table. And if you -- basically, di dn't want you to ask a question. They just wanted you to listen to what they had to say and not basi cally fight back in any way.

Ameren has not proven that this project will benefit M ssouri in any way other than the temporary jobs that it will create during the construction process -- not even the benefits of el ectricity conducted by these Iines. These temporary jobs -- l'mal most done -- do not outwei gh the overall damage and loss of productivity to the Iand of M ssourians. It's a temporary job. My dad's job will span the entirety of his life, and possibly mine. How can somet hing temporary outlie -- out wei gh forever?

I would like to thank the PSC for their hel p and support in this matter, and for hel p keeping the public's interests in mind, and request that the PSC deny this project.
( Appl ause)
J UDGE PRI DG N: Okay. Thank you. Ni na Meyers.

Mb. MEYERS: Yes. I'd like to donate my time to Mchael Kel rick.

J UDGE PRI DGI N: Thank you. Marian Spring.
ME. SPRI NG: I would al so like to donate my time to Mchael Kelrick.

J UDGE PRI DGIN: Thank you. Shar on Johns.
MS. JOHNS: I'd al so like to donate my time, pl ease.

J UDGE PRI DGI N: Thank you. M chael Kel rick.

101
TI GER COURT REPORTI NG, LLC

Thank you. If you'll rai se your right hand to be sworn, pl ease.
(Wtness sworn.)
J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. KELRI CK: My name is M chael Ira Keller, M-I-C-H-A-E-L I-R-A K-E-L-R-I-C-K.

Okay. I'd like to thank the members of the Public Servi ce Commission for being here and for allowing us to testify, and thanks for the people who have ceded their time to me. I appreciate that as well.

I'ma bi ol ogist here at Truman State
Uni versity. I've been here for the past 28 years. I've al so served admini strative roles at the Uni versity, incl uding the director of interdi sciplinary st udi es in the provost's office and as the chair of the bi ol ogy department. My training is as an ecol ogist. I ama practicing conservation biol ogi st and a population dynamics model er.

I have extensive experience doing field conservation bi ol ogy work, I have been funded by and worked cl osely with both state and federal land management agenci es on speci es of conservation concern. Among many studi es that l've been invol ved in conducting, this has
incl uded work in M ssouri -- the federally endangered M ssouri bl adderpod. That's a pl ant species. For example, I conducted U.S. Geol ogical Service Bi otic Resources Di vision funded research and provi ded recommendations supporting, and consequently co-authored the management plan for that plant species where it occurs on Wilson's Creek National Battlefield, which is a national park site just south of Springfield, Mssouri.

I've al so worked in U.S. Forest Service wilderness areas in Col orado and Wyoming, conducting field surveys of amphi bi ans of conservation concern and al so studi es of non-native plant speci es work that was supposed by the Al do Leopol d Widerness Research Institute of the U. S. Forest Service.

All of this is to simply say that l'm testifying as a trai ned and rel evantly experienced field ecol ogi st about consi derations pertai ni ng to the prospective impacts of the proposed transmission project on non- human speci es and habitats.
l'm understanding that in their application testimny Ameren transmission of lllinois, l've heard peopl e referring to this entity as ATXI, sol will as well -- has admitted that they must conduct field studies, perhaps pursuant to the Endangered Speci es Act and other regul at ory stat utes, and thus will need approval going
forward from U.S. Fi sh and Wildlife Service and perhaps al so the Mssouri Department of Conservation regarding the concerns of these agencies. And I'mglad to know this, since it's al so my understanding as an ecol ogist that this woul d be most necessary.

So some comments from correspondence that I'maware of that passed between the Fish and WIdlife Service office here in Mssouri, the Col unbia office, and Aneren, or ATXI, representatives thereof, as well as the M ssouri Conservation Department. These correspondences occurred starting in June of 2014 and through Decenber of 2014. And I'd like to note before I continue with my comments that if l could submit several docurents as exhi bits that I will have mentioned in my continuing testimony.

So among the many concerns voi ced in these pi eces of correspondence from both the U. S. Fi sh and WIdlife Service representatives as well as the Mssouri Conservation Department representatives, they address speci es of federal level conservation concern. These are two bat species -- the endangered -- the federally endangered Indi ana bat, myotis sodalis, as well as its congeneric species that is a candidate for federal listing, the Northern Iong-eared bat. It's myotis detentions.

They al so mentioned impact on tracts of
continuous forest habitat, especially its fragmentation that will occur should this project go forward insof ar as it has well-documented effects on migatory songbird speci es that nest in these forests.

The correspondence al so mentions prospective i mpacts on raptors and ows, thei $r$ nesting habitat; prospective i mpacts on bi parium (ph) corridors, which are important sources of both habitat as well as prey itens for the bird species and the bats that l've al ready mentioned; and prospective impacts on special conservation easements that the Mssouri Department of Conservation has with private I andowners.

All of these will require some level of attention, at the very least in terns of consultation with the pertinent agencies. Mbst will require more or much nore effort, incl uding extensive field survey work, to provi de information that's necessary to address the concerns of these agencies.
l'd like to address this explicitly by readi ng something fromthe correspondence dated December 5th, 2014 fromthe U.S. Fish and Wildife Service office. And I quote, "The Mark Twain transmission project consists of two maj or segments, Maywood to Zachary and Zachary to St ate Li ne. For each maj or segment, Amer en has reduced the potential alternatives within each segment to two
alternative routes per segment. The two routes Maywood to Zachary run through Marion, Shel by, Lewi s, Knox, and Adai r Counties. The two routes for Zachary to State Li ne run through Adai r and Schuyler Counties. Every county intersected by the proposed alignment is known to be occupi ed by maternity col oni es of the endangered Indi ana bat" -- that's a federal endangered speci es -- "myotis sodal is. Furthernore, based on past surveys, the routes pass through five known maternity col ony home ranges." That's where the bats rai se thei $r$ young, and they use the home ranges as the territory for foraging.

Many areas al ong the proposed Iine have suitable habitat but likely have not been surveyed for federally listed bats. These areas of suitable habitat in the aforementioned counties have a high likelihood of occupancy by Indi ana bats, proposed endangered northern long-eared bat. That's the myotis septentrionalis -- al so present in northeast $M$ ssouri and has been documented in Lewi s County. It's much more reportedly known than the more rare myotis sodalis.

The end paragraph of this particular letter fromthe December 5th, 2014 says, "Finally, when sel ecting the final alignment, Ameren should minime overall forest degradation and loss and should avoid habitat fragmentation of existing forest patches to the extent practical to
reduce impacts to federally listed bats and migratory birds. At this time the Service cannot recommend specific routes because each of the four alternatives intersects with know Indi ana bat maternity col ony home ranges. The Service requests a meeting with Ameren and the Mssouri Department of Conservation to coordi nate efforts on the Mark Twai $n$ transmissi on project bef ore the final line is sel ected. Should proposed route alternatives change" -dot, dot, dot -- contact information.

So it seems very clear that there's a substantial amount of field work that would be required to even ascertain whet her there are concerns to be pursued, and then furthermore that the plans for addressing whatever the consequences of those field studies would be would remain to be worked out with those agencies. And those agencies, indeed, would have to approve those plans prior to the project goi ng forward.

I want to mention a couple of papers from the rel evant ecol ogi cal literature that l think state a couple of important points. One that is mentioned by the Fish and Widlife Service; the other that is not mentioned by themthat might even be more important. These are going to be in the documents that I submit as exhi bits.

> So one addresses the effect of forest
structure and fragmentation -- that is, the interruption of
conti nuous forest by construction -- on the site occupancy of bat speci es. Thi s study was conducted in southeastern Mssouri. It's the closest that l could get to the habitat that the bats would be experiencing up here. And in the abstract whi ch distills down what the study had to say, it says that at the Iandscape scale, occupancy of Indiana bats, the federal endangered species, was directly rel ated to the amount of -- right -- forest and Iand cover. Northern long-eared bats, the other species that is a candi date, was uni versally rel ated to edge. That is the smaller the fragment, the fewer the bats would be there because more edge due to fragmentation. And in both cases forest management was viewed as a very important component to the maintenance of these speci es on the I andscape.

So whatever the impacts that are direct of the destruction of forest, which are substantial because the Indi ana bat requi res large snags for its roosting and nesting col ony sites, just the change on the landscape Ievel would al so appear to be detrimental if the forests are goi ng to be destroyed for the installation of this transmission line. And therefore, survey work woul d have to be conducted prior to that time to establish whi ch bats are there and whether they actually represent roosting maternity col oni es for the Indi ana bats, especially under the Endangered Speci es Act.

Finally, another consideration that was not even mentioned by U.S. Fish and Wildife Service and the Mssouri Department of Conservation is the current pathogen known as white nose syndrome -- pathogen -- that is decimating bat species in the eastern part of North American. It's been moving westward over the past ten years, and has reached eastern M ssouri.

We don't know whet her it's present in northeastern Mssouri in either of these two species or not, but both of the two species that l mentioned are hosts for white nose syndrome in other parts of their habitat further eastwards.

So let me just read you a couple sentences fromthe beginning of this paper that was published in 2012, which is a review of the population level impact with white nose syndrome on the endangered Indi ana bat.
"Wite nose syndrome has been associ at ed with severe and abrupt declines in bat abundance in eastern North America since the wi nter of 2006. As of spring of 2012, white nose syndrome has been confirmed in hi bernacul a" -- that's where the bats spend their wi nters -- "as far north as Ontario and Quebec and as far south as Al abamm and as far west as eastern Mssouri. The fungus causing white nose syndrome, Geomyces destructans, has been observed for over a wi der range, occurring in Okl ahomm, for
instance" -- all right -- and so forth.
The impact reported by these authors on this paper across six bat speci es incl udi ng the Indi ana bat and the long-eared bat is a decline of 10.3 percent annually. And for the Indiana bat in particular and other parts of its range, it has reversed the trends of gai ns that it had been making in the prior 15 years, since it was a listed speci es.

So any weakeni ng of the bats thensel ves by virtue of habitat destruction would only render them more suspectible to other such difficulties and insults. To my mind, that's worth taki ng note of, whether the U.S. Fish and Wildlife Service mentioned it or not.

So it would be my recommendation that the Cormi ssion menbers do not approve this request until the appropriate field work has been conducted to provide the appropriate information requi red for the agencies invol ved -- that is the U.S. Fish and Wildife Service and Mssouri Department of Conservation -- to di scharge those agenci es' obligations under the rel evant stat utes to protect wildlife and habitat appropriately. These incl ude the Endangered Speci es Act, the Natural Envi ronment and Policy Act, and so forth.

It seens appropriate to request that the results of these studi es, as well as the consequent plans
to address their findings, should be open for public scrutiny and comments before the Commission rules on a proposed project. If, however, the Commission chooses to approve ATXI's project bef ore such field studi es are conducted in full, and a completed plan for the entire route is devel oped, and they' ve appropriatel y addressed the results of said field studi es, then I must recommend that the Commission's approval be made conditional until the studi es are compl eted in full and the plan for the entire route has been approved by the rel evant agenci es invol ved.

Thank you for your attention. And if you could tell me where I could deliver these documents, I will do so.

J UDGE PRI DGI N: If you can gi ve those to J UDGE PRI DGI N reporter, please.

MR. KELRI CK: Thank you very much.
J UDGE PRI DGIN: Thank you.
( Appl ause)
( WHEREI N; Exhi bit 7 was marked for identification.)

JUDGE PRI DGIN: TimPeters. Al I right. If you'll rai se your right hand to be sworn, please.
(W) Wess sworn.)

J UDGE PRI DGI N: Thank you, sir. Please state and spell your name for the court reporter, and you
may then testify.
MR. PETERS: My name is TimPeters, T-I-M P-E-T-E-R-S.

First of all, l'd like to thank you for gi ving me the opportunity to speak. And I can stand here and tell you my story, as those have before me and will after me, but it's pretty much the same as theirs.

I own a parcel of Iand that this
transmission line will cut di agonally from corner to corner through my property, rendering it usel ess to me compl et el $y$.

The line comes in on my property at the only point in which l can enter it. Therefore, if this is approved, my land is of no val ue to me whatsoever, and will be of no val ue to anyone in the future.

In preparation for toni ght, I thought about telling you at an Ameren public meeting how they tol de me that now they' ve sel ected the line l coul dn't build on it. And I told them "Well, l plan to build my house on it," to whi ch thei r reply was, "Well, we' d have to question your motivations." They would have to question my motivations for doing on my land what lintended to do with it.

There's something really wrong with that. That led me to bel ieve that this process is really kind of whack.

These people here and the others you' ve heard and the others you will hear should not have to
defend their property rights to a company --
(Appl ause)
MR. PETERS: I say instead Ameren shoul d be beggi ng our forgi veness for doing this to us, for making us come here and testify. You, sir, should go back to them and say, "We're doing a terrible injustice," but I doubt that you will.

Ameren may claimthat this is necessary for the greater good, but I have to ask the Corminsion: Can you name for me one person who has suffered by this line not having al ready been put in? l doubt it. But if you I ook behi nd me at the people who are behi nd here yet to testify and the ones who have, you see the faces of the people who have suffered in red. Even bef ore this line is in people will suffer greatly after it's -- if it's approved by you.

Now, l'mnot saying Ameren can't build and grow their for-profit company. l'ma company owner myself. I'mall for profit, but not at the cost of destroying family lives. And to those of you who' ve testified and thanked us, it's not accepted. If I had to make my living destroying a family farmor a century farmor a homestead, l'd quit.
( Appl ause)
MR. PETERS: Let themfind a route that has
no harm There are people who will sell, who don't see the harm Let themfind that route. If they wish to make a profit of $f$ this line, let thempay the cost of doing the busi ness that they have to do, the same way I have to pay the cost of business.
l'mgoing to read to you part of your mission statement that's right on your website: Provide an efficient regulatory process that is responsive to all parties and performour duties ethically and professionally -- ethically and professionally.

Every day l go to work and -- l'll be a little happi er going to work tomorrow knowing that nobody suffers when I do my job. My men come to me. We're in homes. We're in businesses. We're on your family farns. And we have issues that come up in our jobs that we' re doi ng. And they'll come to me and say, "What do I do? We' ve run into a problem" And every day I say the same thing to them "Just do the right thing." I don't care if it costs us money. They' ve trusted us to be in their house. Just do the right thing. I wi sh Ameren had that same goal. We woul dn't be here toni ght.
( Appl ause)
MR. PETERS: I nstead, by choosing through Iines, they' ve pitted farmers and friends agai nst each other, hoping that the others would drop out and hope that
it's your property, not mine. Next, it could be your property. And even if they hadn't chosen mine, l'd be here toni ght.

So I'masking the Cormi ssi on to honor its missi on to behave ethically and professionally and to ask Ameren to do the right thing: To find another way that is ethical, professional, fair, and just; a way that does no harmto the citizens of this state and the people you see bef ore you toni ght. Thank you.
(Appl ause)
J UDGE PRI DGI N: Cormi ssi oner Rupp, any questions?

COMM SSI ONER RUPP: Who was it that tol d you that they would question your intentions, and when did that happen?

MR. PETERS: It was at the same gathering that -- well, I thi nk it was -- Randy was at, at the church, where we were ushered around. For people who know not hi ng about farming, they sure knew how to herd us around like cattle, fromstation to station.

And when I got to the real estate station and started questioning the line and where it was going to go, it was the gentleman there who looked at me and said, "Well, we would just have to question your motivation." That is his di rect words. I was dunbfounded.

COMM SSI ONER RUPP: WAs that -- do you know, was he an empl oyee of Ameren? Was he a legal counsel? Do you know?

MR. PETERS: He had an Ameren shirt on, so I woul d assure he was an empl oyee of Ameren.

COMM SSI ONER RUPP: And where was this?
What city was this?
MR. PETERS: This was here in Kirksville at the First Baptist Church over on Jamison.

COMM SSI ONER RUPP: Thank you.
MR. PETERS: Thank you.
MR. WLLI AME: I'd like to ask a qui ck question.

J UDGE PRI DGI N: Mr. Willians.
MR. WLLI AMS: How I arge is your parcel of ground that the line is to cross?

MR. PETERS: My parcel of ground is 40 acres. And the maj ority of the acreage is fairly rough terrain, so there's really only two building sites. And believe it or not, they cut right through both of them

MR. W LLI AME: Thank you.
J UDGE PRI DG N: Okay. Thank you. Rever end Jeremy Broach. If you'll rai se your right hand to be sworn, pl ease.
(Witness sworn.)

J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. BROACH: J er emy Broach, J-E-R-E-M- Y B- R-O-A-C- H .

Good eveni ng. Thank you for this opportunity. I'ma pastor here in the commity. And there are several with I and in our church that are affected by this issue. I was asked to share on the very sensitive topic, and when asked to share this evening I was a little taken back.

I don't own Iand that's affected, and I know little about the subject at hand. My first inclination was to say no to the offer and just move on. But as l thought about it and researched it, I found there's something l can share that may hel p.

As a minister of the gospel of Jesus Christ, I don't claimany extensive experience or expertise on either side of this issue. I understand some of it and can sympathize with the Iandowners. I understand even less on Ameren's side of the issue. So l won't be speaking toward any of the subjectivity that's been thrown around this eveni ng.

I do, however, carry some authority in theol ogy and what God says about human behavi or. I've
noticed some fear mongering, and now appeal to those who believe in a soverei gn God. This type of behavi or does not line up with your beliefs.

We're to trust God and to do what's right, especially when things don't seemto be in our favor. Trust in the Lord with all your heart and lean not on your own understanding, Proverbs 35 says. And Psal m 37: 25, I have been young and now I'mold, yet have not seen the righteous forsaken or his children beggi ng for bread.

I do, however, have just two nore comments in opposition to this project. God created man with free will. This is one of the key attributes that make us in His i mage. One thing we can see for sure all throughout the scriptures is that God, even in His soverei gnty, will not viol ate our free will. There are consequences when i moral choi ces are made which cause us to lose freedom but we are free to choose. This is one of the reasons we experience evil in the world we do today. God will not make us choose Hi mor make us do His bi ddi ng. It's our choice. And God allows us to make it, even if it goes agai nst the good of all.

He's caref ul to tell us His will and how we should behave, but He never forces us. So I caution forcing someone to go agai nst their free will, even if it can be justified as bei ng for the greater good. To vi ol ate
this principle without moral viol ation would be a grave perversion of governmental power.

Fi nally, there seems to be no way around the facts that property val ues will di minish. The bi blical issue that arises here is one of inheritance. In the scriptures, an inheritance is al so known as a blessing. Many families being affected by this project will be unvillfully forfeiting some of their inheritance. To bless our children, or even our grandchildren, is a good thing and encouraged by God. Like it says in Proverbs 13: 22: A good man leaves an inheritance to his children's children.

So the issue is not one of just land. It's an issue of taking away blessings and violating free will, even when morality is not in question. Pl ease carefully consi der your actions. Just because something is legal does not mean it honors the creator and sustai ner of our Iife. I thank you and I pray that our great God will bless you and gi ve you wi sdom
( Appl ause)
J UDGE PRI DGI N: Thank you. John Mbore.
Rai se your right hand and be sworn, please.
(Witness sworn.)
J UDGE PRI DG N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. MDORE: My name is John Mbore, J-O-H N MOOR-E.

And I would al so to thank you all for your time and listeni ng to our concerns.

When I first came here this evening I wasn't sure exactly what I was going to speak about. As l've sat here, I wanted to rebut a couple of thi ngs that sone of the Ameren surrogates brought forth early in the evening.

One gentleman testified that he worked under neath these power lines to no ill effect, and l'msure that's true. But I can give the example of my brother, who at the age of 15 , after living underneath Ameren transmission lines, devel oped acute lymphocytic leukemia. So I'mnot saying it's fromthe power lines, but I am sayi ng that he did have Ieukemia after living under these power lines for ten years. So for one person to say, "I'm heal thy because I worked under lines," that doesn't necessarily mean that somebody el se might not be healthy. So that is something that we all do need to consi der.

The second thing I would like to address was one of the contractors that worked with Ameren said that they would be wonderful partners for the rest of us to work with. I have one Ameren pole sitting on my property that actually goes to my nei ghbor's house. They wanted to spray, and in doing so they sprayed the shrubs and trees
that were growing up underneath the line, but they al so killed a large patch of my alfalfa that l harvest to feed the sheep.

Then on my nei ghbor's property line that's next to me, they sprayed into the grass that we put up for hay, destroying that. I know it wasn't intentional.
know a lot of the Ameren empl oyees here in the area -- good people. I call several of themfriends. But l al so know that the workers that they may have contracted to do this work are not necessarily as careful as the picture is being presented, so l do want people to realize that.

Finally, the point I did want to make whenever I came here is that when I spoke with Mb. Peggy Ladd earlier this year, she al so used the same derogat ory term of calling people NI MBYs -- not in my backyard. And she said she didn't even want to deal with people like that. And it caused me to think. And whenever Mr. Rupp asked somebody what CRP was, it al so reminded tee that some peopl e don't have the same connection or understanding of the I and that a lot of us here in northeast Mssouri do.

The pi ece of property that I live on that -the lot that -- the proposed line is going to go di agonally across mine, like it is so many others, that piece of property I bought fromthe man that was my sponsor when I was confirmed in the Catholic faith. And he was a friend
of the family for years. He was kind enough to sell me this piece of property. My wife and I built a house on this piece of property. It's hal fway bet ween my veterinary clinic in La Plata and my veterinary clinic that l operate with my father in Kirksville. This is the one piece on the entire planet that I wanted to live. I can see my grandparents' farmfrommy back deck. We built a pond that we could look at fromour back deck. And those power lines are going to go between $m y$ house and that pond.

And I understand there are lots of stories out here just like mine, but what Mrs. Ladd -- Mb. Ladd did not understand is that that I and means something to me. It means something to these people here that's passed down from generation to generation. We' re not a backyard in suburban St. Louis that we can take a big Iump sumfrom Ameren and go buy another place. It's not that way to us. To us, it is our way of life. It means just as much to us as our pets and our family members. We have that connection, that very visceral connection to the I and and to the property.

And so l would ask that the Commi ssi on try to -- try to understand that and try to realize that we need to build these lines -- if it has to be done, we need to do it in the least impactful manner possible. Find ot her routes. Use rivers, railways, hi ghway systens. We
-- there are plenty of other ways. And l can actually see Aneren power lines about a mile north of re. I don't know why that line can't be used as well. I think there are ot her ways. We' ve been way too qui ckly -- or Amer en has been too qui ck to try to push this whole process through and not taking their time like Dr. Kel rick di scussed -lots of ecol ogi cal issues that we need to try to figure out.

I wish that everybody would step back, take their time, and please try to do what's right and what's best for all people involved. I appreciate your time.
Thank you.
( Appl ause)
J UDGE PRI DGI N: Thank you. Aar on
Hol I enbeck.
MR. HOLLENBECK: I'd like to be affirmed.
J UDGE PRI DGIN: Thank you.
(Winess affirmed.)
J UDGE PRI DGI N: Thank you. If you woul d, please, state and spell your name for the court reporter, and you may then testify.

MR. HOLLENBECK: My name is Aar on
Holl enbeck, A-A-R-O-NH-L-L-E-N-E-C-K.
I'mhere today to express my opposition to the Mark Twain transmission project. I feel this line is
harmful to us and our envi ronment. It is easy for Ameren to say that there's no harm when it's not their family that could be affected. If I, standi ng here today as an aut onotive technician for Ford, $t$ ol d you that the best car to buy was a 2015 Ford Edge, would you just take me at my word, or would you go and do your own research and read other revi ews and see if it was, indeed, the best car?

I've had a lot of experience with EMFs. Prior to working on cars l worked commercial refrigeration. And these systens, we have to deal with EMFs affecting our commini cation circuits. If you put a commini cation line too close to a hi gh-voltage line, you will induce a false si gnal to your computers, creating a systemto malfunction.

Mbst of the communi cation wire suppliers have done multiple research to enable their systens to be closer and not be affected by this, by installing shi el ds and cables and stuff inside of them Unfortunately, we can't do that to our homes.

Al so, in the automotive world, as l've al so had plenty of experience as I went to school for automotive technician, cars use communication systems as well. And if you put a hi gh-voltage line, such as a spark plug wire, that emits a current, you can al so affect these sensors and cause fal se readi ngs in the aut omotive world. This leads me to wonder what can happen to the farmers and their
equi prent?
In this -- in the farming industry, more and more thi ngs are becoming computerized. You have GPS- gui ded tractors. You have planters that determine how much seed to put al ong the way, how much fertilizer to install in the soil. If driving underneath of these power lines could induce a voltage into these communi cation systens, you could al so affect your production on that Iand.

At what expense do the farmers have to suffer for the -- Ameren to have gai ns of fatter pockets? I live right next to the land that Ameren is proposing to have the Zachary substation. Thi s land has been in my family for over 100 generations. It's passed down fromme -- or frommy family, and l plan to pass it down to my ki ds, and then their kids, and futures to come. At what extent is it -- to what extent do we go to say that your profit is worth more than my family and my future family's heal th and well-bei ng?

I ask you guys to take all of these testimni es that have been gi ven to you and deeply consider the potential harms that can be caused to us and our communities. So let our voi ces be heard as a united group. I thank you for your time.
( Appl ause)
J UDGE PRI DG N: Al I right. Thank you.

Ariel Shapiro. Are you the same Ariel Shapi ro that testified last night?

MS. SHAPI RO. Yes. I'mreading on behal $f$ of someone el se.

J UDGE PRI DGI N: Al I right. Thank you. If you'll rai se your right hand to be sworn, please.

MS. SHAPI RO: Can I be affirmed?
J UDGE PRI DGI N: Yes, you may.
(Winess affirmed.)
J UDGE PRI DGI N: Then if you woul d, pl ease, state and spell your name for the court reporter, and you may then testify.

MS. SHAPI RO: Shoul d I spell thei $r$ name or mine?

J UDGE PRI DGI N: Both, please.
ME. SHAPI RO: Okay. A-R-I-E-L
S-H-A-P-I-R-O. And the person I'mtestifying for is D-A-N-A M-C-D- WE-L-L.

I would like to express my concern over the transmission line that will run through Adair County. I have lived in Adair County my entire life, and it is a great place to live. Why are we wanting to destroy it by putting these power lines across it?

Adai $r$ County is known for being one of the best deer, turkey, and other hunting in northeast M ssouri.

These lines will make a great difference in hunting wildife and their habitats. These transmission lines could change the revenue that Adair County gets from the hunter that comes during the different hunting seasons. We need to preserve our county for our children and future gener ations to come.

I truly hope the Commission will say no to these transmission lines and hel p us preserve our county. I say no to this eminent domain and future ones. These transmissi on lines will lower the val ue of the ground that they cross drastically. They will limit the use of the ground. These lines will destroy devel opment for the future of this ground that they cross. These lines are crossing much of our prime farmground and wildife habitat. Today, it's this bunch of transmission lines. Tonorrowit's a new bunch, and across different Iandowners and ground. Pl ease hel p us to preserve our ground. Dana MEDowel I .
( Appl ause)
J UDGE PRI DGI N: Thank you. Mark Thompson. If you'll raise your right hand to be sworn, please. (Witness sworn.)

J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may testify.

MR. THOMPSON: My name is Mark Thompson, M-A-R-K T-H O-M-S- O-N.

Mark Thompson, standing here in front of you thi s eveni ng, is a commissioner from Adai r County. l'm proud to be part of the Adair County Cormission, because we drafted the initial resol ution in opposition to the Mark Twai $n$ transmissi on line.
( Appl ause)
MR. THOMPSON: As a politician, you mi ght find this a little bit di sheartening, but l'mgoing to keep this short toni ght. So -- most politicians don't.

When I first came in, I noticed the young I ady over here with a TV camera. Her name is Ashl ey Koch. I remember her at the same meeting we' ve tal ked about toni ght over at the church on Jamison Street. I know that she was standing -- sitting out there in a KTVO car. It was hot. She was denied access into that meeting.

I don't like the word transparency, but what are they hiding? Why di dn't they let the media in there to hear what's going on? I find that unacceptable.

I'mgoing to make this short, sol'd like to express that God has blessed northeast Mssouri farmers to serve as our breadbasket and the shepherds of our farmand. The transmission line would simply be a -- an everlasting big foot print diminishing our heritage and our
productivity. So -- aml enotional about this; yes. I am a farmer. I -- my family -- family's farm we're about a quarter of a mile fromthe edge of the transmission line, so it doesn't affect me personally nor my family.

Another thing l'd like to share with you: CRP. That's been brought up several times tonight, the Conservation Reserve Program The transmission Iine would force Iandowners who have contracted with the federal government to invol untarily vi ol ate thei $r$ contractual agreement, and consequently result in substantial financial penalty. I can say that very truthfully because I contacted the USDA chi ef executive director today. He's responsible for three counties here in northern M ssouri -Adai $r$ County, Schuyl er County, and Putman County. He called me dad. So very proud of him He tells it like it is -- the truth.

I taught here for 31 years on this campus. I hear very many -- I hear lots of times frompeople that I teach with here, but last ni ght and toni ght the public has spoken. Their testimmies have been articulate, educated, enotionally packed presentations fromthose who oppose the transmission line. And not onl y Iast ni ght, but toni ght, there -- I guess a concern I have is when the transcript fromthis ki nd young I ady over here are conveyed to the rest of the Commission through a transcript that they may
not feel the emotion behind what is expressed toni ght.
Last ni ght I heard the opponents di scuss their families' lives and livelihood bei ng devastated by the proponent's financial bei ng. Commissions (sic), whether it's yours or a county commission's are accountable to their constituents. An advertised public hearing was hel din Adai $r$ County at the courthouse a few weeks ago concerning the transmission line resulted in both pro and con input fromthe attendees. A show of hands vote reflected two in favor and 51 opposed to the transmission Iine. Numbers do talk.

Five counties have -- let me start again. Fi ve counties' commissions have bol dly spoken in opposition to this transmission line. A quote fromIndi ana Jones' movies seens very applicable at this time. To the Public Servi ce Commi ssi on, choose wi sely. Deny thei r request.

To sum up toni ght, l'd like to talk about green energy. You know, we' ve tal ked about wi nd energy, sol ar and that kind of stuff. I look at wi nd energy as money. Mbney is green, and money has a powerful energy to achi eve desirable outcomes. As a commissioner, I cannot be bought. Thank you.
( Appl ause)
J UDGE PRI DGI N: Any questions?
CHAI RMAN HALL: No questions. Thank you.

J UDGE PRI DGI N: Al I right. Thank you very much.

MR. W LLI AME: I do have one bri ef question.
JUDGE PRI DGIN: Mr. Williams.
MR. W LLI AME: If you would very briefly expl ain what the CRP is.

MR. THOMPSON: I think it was expl ai ned earlier toni ght, if you were listening. CRP is the Conservation Reserve Program l've invol ved in it. It doesn't affect my property.

It puts land in a contract with the federal government for ten years. It sits idle. It's designed both for soil conservation and wildlife refuge habitat.

MR. WLLI AME: Thank you.
MR. THOMPSON: Yes, sir.
J UDGE PRI DG N: Al I right. Thank you. The next witness is Deborah (indiscernible). And I believe -di d you testify last ni ght?

MS. DEBORAH: I did, and if l've got a few min nutes toni ght l'd like to give it to Deborah Ganes.

J UDGE PRI DG N: Al I right. Thank you. Pat Doors and -- did you testify last ni ght?

ME. DOORS: I testified at Shel by County, but I would like to give my time to Deborah Ganes.

J UDGE PRI DG N: Al I right. Thank you. Al I
right. Deborah Ganes, I believe you testified last ni ght? MS. GANES: Yes, I did. I have new
i nf or mation.
J UDGE PRI DGI N: Okay. Is this something where you may be preventing somebody who hasn't been able to be heard yet frombei ng heard? I mean --

MS. GANES: The inf or mation I have represents the work of 300 people, and I feel a responsi bility to share some of it.

JUDGE PRI DGI N: If you're reading froma letter, would you mind submitting the letter and summarizing it rather than simply readi ng, just so we can get other people to the microphone who haven't had a chance to speak yet?

MS. GANES: I think it's important enough to hear. l'll probably take ten mintes, if that.

JUDGE PRI DGI N: All right. l'II gi ve you your ten minutes. If you'll raise your right hand to be sworn, pl ease.

MS. GANES: Yes.
(Wtness sworn.)
J UDGE PRI DG N: Thank you. Pl ease state and spell your name for the court reporter, and then you may gi ve your testimony.

ME. GANES: Debor ah Games, D-E-B-O-R-A-H

G-A-N-E.
Thank you for the opportunity to speak to the Commission. Thi s line is going right through my daughter's homeschooling cooperative in La Plata, and would devastate it, an intentional commity in La Plata, that Iives without el ectricity and teach it the skills necessary to do so. It's heartbreaking to have this line next to our homeschooling cooperative because it's not safe for children to be around.

There's nothing you can say to a two-year-old to keep themfromrunning under a transmission line. And if there's wind, rain, or stray voltage, it could be fatal. I'm deeply concerned for all the children in our community, born and unborn. And I don't want any children to have cancer.
l'mal so concerned for those children as adults, as adults will have farmand that is encumbered with easements for transmission lines. Farmand is restricted from productive use means there's less income for future generations and less likelihood of the family farm survi ving.

I'mconcerned this project doesn't provi de a net benefit to M ssouri. Ameren Mssouri doesn't need the energy with their electricity generation bei ng reduced by 7 percent in their 20-year plan. Ameren Mssouri is the only
utility that's part of MSOin Mssouri. The rural el ectric cooperatives, the only other utility compani es in northeast Mssouri, are not planning to use Mark Twain. And they serve more of the meters in our counties than Amer en does.

There are no operating wind farns in M ssouri that are planning to use Mark Twain. There are no proposed wind farms in Mssouri that are planning to use Mark Twain. There is no plan to devel op wi nd energy in the state of Mssouri. When Shuteye Creek Wnd Farmwas terminated in 2012, Tradewi nds' CEO Rod Freeman said it's increasingly evi dent that the wi nd energy market in Mssouri will simply not devel op in the foreseeable future gi ven the lack of interest in wi nd in the state.

There are no significant reliability issues in northeast Mssouri. There are only alleged reliability issues starting in 2021, and they begin to drop of $f$ in 2026, according to an engi neer with a Ph. D. in el ectrical engi neering from MT.

Mark Twain is not needed for Ameren Mssouri's plan to add 400 megawatts of wind energy. The Department of Energy projects a major decline in wi nd power growth in the U.S. after 2016. The federal wind tax credit has expired, and wi nd devel opment will not continue without it because the wi nd farm玉 are cost prohi bitive and
unsust ai nable.
Mark Twai n woul d devastate or destroy al most 300 farms, including century farms, and 54, 000 acres of farmand in northeast Mssouri. ATXI is not goi ng through farns in lllinois, or Md-America Energy is not going through farms in Iowa. And those are the states which benefit the most fromthe line, because they produce the most wi nd energy in MSO and are selling it to the east coast.

In IIIInois, ATXI must observe property boundary lines. In I owa they are using exi sting easements and upgrading an exi sting 161,000-volt line to 345, 000 volts. ATXI proposed a route which minimed their costs, but then the burden of increased costs is placed on our farms instead.

ATXI would maximize its profits and guarantees a 12. 38-percent return on equity. It makes it virtually risk-free for ATXI with the forward-Iooking rate cal cul ation.

Our farns aren't earning anything fromthis Iine. In fact, they are losing farmincome and being i nadequatel $y$ compensated for the amount of farmiand that would be taken out of full production forever.

Further more, they would bear the increased expenses of a 345, 000 - volt line interfering with farming. Thi s cost can
be up to 200,000 or more per farm
Under the Ri ght to Farmlaw passed in August of 2014, ATXI doesn't have the authority to take farmand out of productive use. And it's a constitutional law to protect Mssouri's number one industry: Agriculture. The Ri ght to Farmlaw protects farms so corporations can't devastate or destroy farnฐ to maximize corporate profit.

ATXI cal cul ates the cost of this project as 8 percent of the total project cost of 224 million , or about 18 million to M ssouri ratepayers. However, the real cost is to our farns and loss of farmincome due to decreased production and increased expenses.

Farmexpenses just to accommodate the line would be over $\$ 50$ million. This doesn't include the production income loss forever. When this real cost is incl uded, the costs far out wei gh the benefits to Mssouri.

Mark Twain requires upgrading the el ectrical systemfromno code to National Electric Code at the farmers' expense. That al one makes this line cost prohi bitive to everyone on it. Other expenses incl ude Iosing hundreds of acres of val uable top soil due to construction; having to buy out of CRP; havi ng to repl ace el ectric fencing, GPS systens, el ectronic wei gh scal es on the grain cart, metal storage bins; crop loss fromacres that can't be sprayed by a crop duster; price of cattle
killed fromstray voltage; income loss due to the renter asking for less cash rent per acre; income loss fromleased hunting ground due to construction and mai ntenance; less crop yi el d due to soil impaction. The list goes on and on.

These expenses can reach 200,000 or more per farm not incl uding the annual loss of income of up to 60,000 or more per farm These would be out-of-pocket expenses to financially strain farmers. These actual tangi ble expenses should be included in a cost/benefit anal ysis of the project. If ATXI is viol ating the Right to Farmlaw and going through farms to save costs, they should be required to compensate farm玉 for these added expenses. Otherwise, ATXI is maximizing profits by passing what would be their costs on to the farms.

ATXI's cost for the line is \$2 million per mile. If they cut through farms to take the strai ghtest di stance between two points they save costs. If they save ten miles of transmission, they' ve saved 20 million. But it's costing the farms 50 million. And if ATXI were held accountable for this cost, it would be more cost effective for themto avoid the farms.

Even going al ong the property line-property boundary lines of the farm if the easement is on productive Iand, the same Ioss of income and increased expenses applies. Only if ATXI is hel d accountable for
these costs then are they financially motivated to consi der using exi sting easements or upgrading exi sting lines.

One farmwill lose 60, 000 annually forever.
That's $\$ 6$ million a century on a century farm ATXI devastates the poorest counties in Mssouri and then brags the cost to Mssouri is only $\$ 18$ million. This is wrong. They do this by ignoring the inconveni ent costs. This perpet uates erroneous deci sion making on everyone's part.

Now that Mssouri has a Ri ght to Farmlaw and productive farmand is protected, these costs should be part of the equation in the cost/benefit anal ysis.

Eval uating true cost supports the best decision making. When these costs are incl uded in the project cost/benefit anal ysis, the project does not meet the 2.3 to 3.3 cost/benefit range, and therefore it doesn't pass the test of whether the proposal is economically feasi ble.

The only benefit to Mssouri is a small
anount of tax revenue. Even if it's promised tolast 20 years, the danage to our farms will last for centuries. Money is not a reason to obliterate our livelihoods, vi ol ate our Ri ght to Farmlaw, and vi ol ate our constitutional property rights.

Our engi neer has recommended exist --
upgradi ng an exi sting 161, 000 -volt line to 345,000 volts,
i nstead of buil ding this line. This would minimeland use i mpacts and provi de the lowest cost to ratepayers. ATXI isn't motivated to upgrade the existing line because they would earn 12.38 percent on the upgrade cost of 10 million rather than the project cost of 224 million.

Viol ating the Mssouri constitutional Right to Farmlaw to maxi mize thei $r$ profits is confiscation of farmand, and it's illegal according to the Right to Farm I aw.

The weather in Mssouri has been enough of a challenge for farmers. Three of the last four years have ei ther been drought or excessive rains. The county losses this year on average were two and a half to four million per county. Farns have enough challenges without the added burden of corporate interests.

The Mssouri Department of Conservation recommended that ATXI choose a route whi ch destroyed the least number of forest blocks, utilize nore existing easements, and I argely follow the roadway. Instead, ATXI chose a route which destroyed more forest blocks, used al most no exi sting easements, and di agonally goes through farms.

J UDGE PRI DG N: That's ten mintes.
MS. GANES: That's ten. Okay.
J UDGE PRI DGI N: If you can wrap up qui ckly,
that's fine.
MS. GANES: Okay. Thank you.
It's important to discern whi ch projects are essential. As we know, M SO has planned to spend 25 billion in the next 25 years. $M$ SO has al ready pl anned another four transmission Iines in Mssouri, one of which is in NEMD -- northeast Mssouri. Proposed transmission projects will continue for at least the next decade per an anal yst S\&P Capital IQ.

We respectfully object to our farms bei ng obliterated by continued proposed transmission lines. A maj ority of I andowners are opposed to this line for I egitimate reasons. We request that the PSC require ATXI to provi de the cost/benefit analysis of the alternatives consi dered.

And lastly, please take heed of our county commi ssioners' decision to oppose the project and do what's right for the farms and citizens of Mssouri. We ask for your hel pin defending our farming rights and our constitutional property rights. We count on your hel p. Pl ease deny ATXI franchise, or at least di sapprove the Mark Twain project. We're not willing to forfeit our farming rights or property rights to corporate profit.

Thank you.
(Appl ause)

J UDGE PRI DGIN: Al I right. Thank you. The next witness is Mark Schild. And what l'mgoing to do -don't -- please, just a second, Mr. Schild. I've got about 20 witnesses left, and l'mtrying to get everybody in bef ore we have to leave the building. If you'll try to watch me, l'll try to gi ve you a warning when you' ve got one minuteleft. And then if everybody gets at or near the five minute time, l think we can get everybody in, but l'Il just ask everybody to try to be sensitive to time.

All right. Thank you, sir. Very good. Thank you. If you'll raise your right hand to be sworn, pl ease.
(Witness sworn.)
J UDGE PRI DG N: Thank you, sir. Pl ease state and spell your name for the court reporter, and then you may testify.

MR. SCHILD: My name is Mark Schild, M-A-R-K S-C-H-I-L-D.

The farmthat is impacted by this transmission line is in Knox County. It's 95 acres. It's the first farmmy parents bought, and now l own. It was purchased 60 years ago. It has been rented by sharecrop for the entire 60 years. The last 45 years -- it's been rented by two farmers, sharecropped the last 45 years by one.

141
TI GER COURT REPORTI NG, LLC

I guess my question is: What is my farm going to be worth with a transmission line that runs from the center of the north border di agonally to the southeast, the entire length, and exits the southeast corner? And what is it going to be worth if my sharecrop renters el ect not to farmanymore -- or anybody el ects not to farm lt will be dirt and that's it.
l'd like to make kind of an anal ogy for the people who don't own ground but own a house, is that this Iine enters my home by driving through a wall. You drive through my home and you exit another wall on the way out. Ameren wants to compensate me for the hol es and the damage, which will never be enough. The holes in the wall, the hol es in the home, cannot be fixed by me, my sons, my grandchildren, or their children because that's the way it's going to be.

Thank you for your time.
( Appl ause)
J UDGE PRI DGI N: Thank you. Annette Sweed, Dougl as Sweed, have you al ready testified? No response. All right. Thank you. Et han Hughes.

You can -- thank you. If you'll rai se your right hand to be sworn, please.
(Winess affirmed.)
J UDGE PRI DG N: Thank you very much. If you
woul d, please state and spell your name for the court reporter, and you may then testify.

MR. HUGHES: First, can I ask my fellow I andowner, Hel ena Marcus is in France and has asked me to al so testify? We created this pi ece toget her.

J UDGE PRI DGIN: Sure. That's fine.
MR. HUGHES: Thank you.
You spell her nawe H-E-L-E-N-A, Marcus, M-A-R-C-US. My name is Ethan, E-T-HA-NHUG-HES, Hughes. Thank you.

I want to start by asking everybody: What was the United States government built for? It was actually made to serve the American people. And busi nesses were built to serve the needs of the American people. And so it's amazing that we have to work hundreds of hours to be heard by the government. I appreciate that you are here. I know you have a family and you have nei ghbors and you're spendi ng your time here, and I honor that you're here. And everyone el se, thank you.

But I don't thi nk American citizens need to spend hundreds of hours to get si gnatures to tal $k$ to the very corporations and governments that are supposed to serve us. It says it in the constitution.

So is this project in the public interest? First, we have to ask: Wo is the public? Wo's the
public in Mssouri? Areren Illinois? They don't live in Mssouri, so they can't be the public interest of Mssouri. Out-of-state experts? They have nothing to do with the interests of the people of Mssouri.

So rai se your hand if you are a public interest -- someone representing the public interest of Mssouri. And if you are agai nst this let me hear you say no.

CROWD: No.
MR. HUGHES: So this hearing shoul d be over right now, if we're respecting the laws of the American government. And I have been here with my wife. My daughter is staying up with a cold and a sore throat. We al ready said no.

But then the next question: Well, let's check on the experts. So who are the experts? Ameren IIIinois? Let's check. In an open house -- l'ma beekeeper of 15 years. Hollenbecks have 30 years. But we're not experts. We're sharing about the loss of the honeybee. We' re tal ki ng about deci mation of lots of our food if the honeybee di es.

So they sai d, "Oh, we have an expert and you're wrong." So I di d some research. The Ameren expert took a weekend bee class and they said they're the -- they were the bee expert. And then I did a little survey. And
this is just for common sense. I went up to Ameren employees at the open house at the church and I said, "Okay. If there were two identical farns and one had a power I i ne and one di dn't, whi ch one woul d you take?" And the I ower empl oyees of Aneren said, "Of course, we'd take the one without a power line." I started to ask six of them-- I said, "Thank you for just being honest, for telling the truth." The head person came in.

We got trouble Houston over here. We have someone who's a rural di mit trying to make scenarios.

So the guy comes down. He sai d, "What's the question?" And I say, "What woul d you do? Two i dentical farms: One with a power line and one without." He looked me straight in the face and said, "I'd take the one with the power line."
( Laught er)
MR. HUGHES: That's not an expert. That's ridiculous. But they said that to my face.

So who's the expert? Is it the bureaucrats in WAshi ngt on, D. C. who have never milked a cow at 6: 00 in the morning, who are wal king away with millions of Americans' money? No. They're not the experts for northeast M ssouri.

So who is? Is it the lawyers? Well, all these so-called experts haven't spent a day or an hour or a
minute in northeast Mssouri, and they're trying to tell us what's in our best interests. It's -- it is ridiculous. So the -- I want to find out: Who are the experts? Who Iistens to residents? Who sat with them Wo listened to Ameren? Wo listened to the Publ ic Servi ce Commi ssion? There was someone in our county who lives here, our nei ghbors, and they are the count y cormi ssi oners. And I want to gi ve thema round of appl ause right now.
(Appl ause)
MR. HUGHES: I had time for Hel ena Marcus and myself which makes ten minutes.

JUDGE PRI DGI N: l'msorry. You're correct. You can continue.

MR. HUGHES: But thank you for checki ng. I want to honor everyone's voi ce toni ght.

So they live with us. They are actually the experts in this situation, because they're el ected by us; they know what's happeni ng on the state level; and they are listeni ng to us. Not like going into the open house and bei ng treated like we're not human bei ngs and di srespected.

So we ask the experts toni ght, all the county commissioners: Wat's your vote? You are the experts. You live here. You el bowto-el bow with your nei ghbors. And every one of them says no. So you haven't listened to the American people. So next let's listen to
the experts, the county commi ssioners. And they say no. They know us. They know our commity and our community needs. So, agai n, l'mjust inviting you to follow what the American constitution says to do. Listen to the people of America. Listen to our local authorities that live with us, not someone fromout of state. They' ve never spent a moment or a second at my farm learning my name or my daughter's name. So now you're saying maybe -- well, this is just some guy that lives on a farm and I don't understand the big part of America -- the need for energy, so this is all kind of local and not really rel evant. Really? Does America need more power? Do we need another Las Vegas? Do we need another strip joint? Do we need another -- where does all this power go?

Has Ameren sai d, "Let's shut off Las Vegas so we can have our homes"? That hasn't even been proposed. Where does it go, millions of dollars for mansions that our el ected officials -- which 90 percent in Washi ngton D. C. that are senators and our congress people are millionaires. Can they represent us?

What about electricity? Do we need more? According to many sources, if we put in retrofitted all-electric saving devi ces right now in the United States, in every home, every institution, in every school, in every hospital, we would reduce overnight 70 percent of America's
el ectricity use -- 70 percent. Well, the question is: Why don't we do this? We used to practice thrift and humility and frugality, the val ues our ancestors stood by. Why don't we do this? Because Ameren sells el ectricity. There is no profit in this approach, to actually honor God's creation and actually live with humility and live with frugality. There is no money. And we all know that this is all about money. Everyone who has spoken toni ght has been paid to come up here. There's been bribes to our local officials, and it's an outrage. Basketball games and money --

## (Appl ause)

MR. HUGHES: I know all of you sitting there know what's happeni ng on the state level. I have no idea, and I'msure it's shocking. Bi g government and big corporations have had an unholy alliance, and l'mtired of God's creation being pushed around, our farms and homes being rolled over, and profit over people. So this is about money. And our heroes on the city council, the county commi ssi oners are saying enough. Ri sk everything for what is right, and not -- there's more.

We know this is corrupt. We know it's about money. I invite you toni ght to actually do something different. Forget about money and power. Jesus said what use is it to own the world and have all the riches of the
world if we lose our own souls. So in the end we don't need this project. But l'mgoing to end with (indi scernible) final authority in my life: God and Jesus Christ who said, "You shall know my disciples by their love for one another." One of the greatest commandments is love your nei ghbor as yourself. The Gol den Rule is do unto others as you would have them do to you.

So dear Publ ic Service Cormi ssion, pl ease, all of you sitting there up front, l ask you to humble yourself to the ultimate expert and authority, God and love, and to choose our families, our commity, creation and nei ghbors, choose a new course for America, a nation based in humility, a nation based in love for one another, a nation that honors God's holy creation. Seek in your hearts toni ght. Stand up for truth.

It is time to do the right thing. Say no to greed. Say no to this line and yes to the American peopl e; yes to committing to take care of creation; say yes to us, your nei ghbors, who God has commanded you to Iove. Thank you.
(Appl ause)
CHAI RMAN HALL: Mr. Hughes, thank you for that compelling testimony. You made a number of very interesting points. I want to -- and I would remind you that you're under oath. You alluded to some bribes. I was
wondering if you could give me more inf ormation about that. Or were you speaking metaphorically?

MR. HUGHES: I wasn't speaking
met aphorically.
CHAI RMAN HALL: Okay. Wel I, I --
MR. HUGHES: I don't know how politics
works, so I want to honor my local county commissioners and other people in the room but there were basketball games offered to people in this room And linvite the county commissioners and I invite those who have been offered thi ngs to come up and speak. But I amgoing to have to stand by people in the room who shared that inf ormation with us. And l -- you all know that there are bribes happeni ng on the state level.

Can I ask you under oath: Are there bribes happening at the state level right now?

CHAI RMAN HALL: Mr. Hughes, you' re not doing yourself service right now. Okay. You alluded to bribes under oath. That's a serious, serious charge. Now, if what you are telling us is that you' ve heard from others that they recei ved offers that constituted bribes, that's one thing. Is that what you' re saying?

MR. HUGHES: That is correct.
CHAI RMAN HALL: Okay.
MR. HUGHES: Ot her peopl e --

CHAI RMAN HALL: Okay.
MR. HUGHES: -- ot her politicians --
CHAI RMAN HALL: No. I woul d wel core anybody el se in this roomthat has direct evi dence of this happening, pl ease provi de us with that information. Thank you.

MR. HUGHES: Yeah. Thank you so much for that clarification. It was hearing that other people were bribed. And I just want to say that my daughter, who's ei ght, wrote -- she's spoke at testimony, and just because of the enotional impact and fear she was too scared to read it toni ght. So just think about the impacts al so to our children. But l'm going to hand in her testimony, Etta Iris Wilcox Hughes, my hero, age ei ght.

J UDGE PRI DGI N: Thank you. This will be Exhi bit 8, Madam Court Reporter?

COURT REPORTER: Yes, sir.
J UDGE PRI DG N: Al I right. Thank you.
( WHEREI N; Exhi bit 8 was marked for identification.)

MR. HUGHES: I do apol ogize that I was uncl ear about that. Thank you for making it clear. I appreci ate it very much.

J UDGE PRI DG N: Al I right. Thank you. Patricia Faj kus. I hope I'mpronounci ng that name
correctly. I'msorry. If you'll raise your right hand to be sworn.
(Witness sworn.)
J UDGE PRI DGI N: Thank you. If you woul d, please state and spell your name for the court reporter, and you then testify.

MS. FAJ KUS: Patricia Faj kus. It's
P-A-T-R-I-C-I-A F-A-J-K-U-S.
l'd like to thank the menbers of the Mssouri Public Service Commission for the opportunity to just come and speak to you and testify.

I amopposed to the transmission project. I was raised on a farmjust three miles east of Queen City. Both of my parents are deceased, but our family farmis now ouned by myself and seven siblings. Our family farm has been, and hopefully will be -- continue to be a source of income and great pride for our family.

My brother and his wife still live and work in our family farm Our father was a Wbrld War ll veteran and Ioved farming. He al ways looked for new and innovative ways to farmand provide for our family. The rural lifestyle that we live was built on love and hard work, and farming remai ns to be one of the best ways to rai se a family.

The original proposed transmission Iine was
to cut across and di vide our family farm down the middle.
The original proposed easement was estimated to be appropriate 47 feet fromour family home, taking out a swath of productive farmand and running right through our yard, taking out a very old large tree in the front yard. The line would al so take out the farmlane which was used to reach the fiel ds to the south of our property.

Ameren has said that they would move the Iine to the property line, but al so stated that they could change that location if they so wish. Even if the line were to be moved to the property line, it would still take out a large portion of productive ground and source of income and lower the val ue of our property.

Li ke most farmers in northeast Mssouri, we're not weal thy and our farmis not large. Farming is hard work, but the I and is more than just our livelihood. It's a way of life.

The unsightly hi gh-voltage lines would cut through our beautiful countryside and family yards, destroying unhi ndered vi ews of nature. If you could see our family farm-- l wi sh you could -- our house sits up on a little rise, overlooking a valley, and the line would go right past that.

In concl usion and summary, I oppose the hi gh-voltage project because (1) it will take val uable
farmand out of production and reduce the val ue of our I and, some say as much as 50 percent. Secondly, the lines will introduce safety hazards. There are questions about the safety of this 345,000 -volt line. Small children living close to these lines being at risk as childhood I eukemia has been linked to exposure to high-voltage lines.

There are many studi es that do show hi gh-voltage lines causes cancer. I just Googled it earlier and you can just read it right on the Internet.

My nephew, who wanted to build on the property, has recently deci ded not to build there because of concerns for the health of his young daughter fromthe effects of the hi gh-voltage line. Sadly, he's already deci ded it may not be safe to live on the family farm where he was rai sed if the line goes through.

Lastly, it's my understanding that Ameren customers will see their el ectrical rates increase because of this project so that we can help pay for this project, and then on top of that our I and will be taken by Ameren so that Ameren of IIlinois can profit. Fromour collective Iosses, they will profit.

Ameren is the only party to gain on this project. It is my opi ni on that this hi gh- voltage transmission line is not in the public interest. It's only in the interest of Ameren of Illinois.

Thank you for listening, and l respectfully request that you deny Ameren of IIlinois's request to build this hi gh-voltage line. Thank you.
( Appl ause)
J UDGE PRI DG N: Al I right. Thank you. The next witness is Anthony. The Iast name begi ns with an $F$, and l'mafraid l can't read it.

MR. FAJ KUS: It's Faj kus.
J UDGE PRI DGI N: Thank you. I apol ogize.
MR. FAJ KUS: No. I apol ogize for not bei ng able to write it clearly.

JUDGE PRI DG N: If you'll pl ease rai se your right hand to be sworn.
(Wtness sworn.)

MR. FAJ KUS: My nane is Ant hony Faj kus. I go by Tony Faj kus -- Tony. Last name is F-A-J-K-U-S.

I thank you for this meeting that you have. I was reading your website about the things that the Public Servi ce Commi ssion does: Gathering inf ormation, serving the public. You are a commission that serves the public, and so it's like - as l'mlooking through your vi sion statement, the thi ngs that you're doing, I was very

155
TI GER COURT REPORTI NG, LLC
i mpressed in terns of what -- the purpose behind all that you do here is. And l'd like to be able to address you toni ght.

I've listened to these people talk about al the thi ngs that -- how they're being affected -- their lives, their farms. And I just wanted to -- you know, somet imes indi vi dual s in these situations, it's like, you know, who are we? Who are our names? I mean, why don't we have a -- we vote. We have opi ni ons and things like that.

But I wanted to -- it reminded me of some other peopl e that are very important. I mean, if the presi dent of the United States showed up toni ght and he was sitting out here and he stood up and he said, "Hey, I have an opi ni on. I want to -- you know, you would probably listen to that and say, "Vell, he's not just anybody." Ri ght? Even if the governor of the state came.

And so I was just goi ng to just read some quotes by some people. These are some of the founding fathers of our nation. And some others are Ieaders in our country.

And they addressed the issue of property rights and whether it's important or not. Toni ght, l'd just like to -- one of the resounding things I heard over and over again is people say these are our properties. We should have some rights when it comes to this. This is
i mportant; these farms are important to us. Please hear our voi ce.

So listen to these voices. Samuel Adans said, "Among the natural rights of the col oni sts are these: First, a right to life. Secondly, liberty. Thirdly to property. Together with the right to def end themin the best manner they can."

J ohn Adans said, "Property is surely a right of mankind as real as liberty."

John Jay said, "No power on earth has the right to take our property from us without our consent."

James Madi son -- you know all these people. You' ve heard their names before, so l won't tell you the positions they've had in the past. "As a man is said to have a right to his property he may be equally said to have a property in his rights."

Cal vin Coolidge, "Ultimately, property rights and personal rights are the same thing."

Lastly, William Howard Taft, "Next to the right of liberty, the right of property is the nost i mportant individual right guaranteed by the constitution, and the one which is united with that of personal liberty has contributed more to the growth of civilization than any other institutions established by the human race."
l'Il just leave those with you because if
those gentlemen were here toni ght and they were telling you their opinion about the situation about family farns or your were ready to seize their farmor run a line through their house or whatever it might, I think the Commission might hear those individual voi ces differently. But it shoul dn't be differently. We're all citizens. We all want to do the right things. We want to do the right thing. So I ask you to deny this request by Ameren UE. Thank you very much.

## ( Appl ause)

J UDGE PRI DG N: Al I right. Thank you. I apol ogize if l get the next name wrong. Stephen Hadwi ger. Wha I close? No.

UNI DENTI FIED SPEAKER: I thought it was St ephen Hadwi ger.

J UDGE PRI DG N: I'mvery sorry. If you'l| rai se your right hand to be sworn, please.
(Wtness sworn.)
J UDGE PRI DGI N: Thank you, sir. Please state and spell your name for the court reporter, and you may then gi ve your testimony.

MR. HADW GER: Al I ri ght. St ephen Hadwi ger, S-T-E-P-H-E-NH-D-DI-G-E-R.

May I quickly bring up these for you to look at?

158
TI GER COURT REPORTI NG, LLC

J UDGE PRI DGI N: You may -- gi ve those to J UDGE PRI DGIN reporter.

MR. HADW GER: l'Il give them to J UDGE
PRI DGI N reporter.
J UDGE PRI DGI N: Okay. Oh, these are al I copi es? Okay. Thank you.
( WHEREI N; Exhi bit 9 was marked for
identification.)
MR. HADW GER: Yes. These are all --
The first thing l wanted to do is to mention that yesterday I made some honey butter bi scuit cookies, and I used the honey from Hollenbeck farns. And if I realized, I actually would've brought a sample for each of you to see what the delicacy is, that we will lose here when the Hollenbecks lose their liveli hood.
( Appl ause)
MR. HADW GER: But I want to draw your attention al so to this di agram This is one of the di agrams for the line going north fromthe Zachary station. And on B-19 it goes right bet ween my house at 22626 Spencer Lane and the Di Stef ano house which is just south of it.

My house is located -- if you can see the yellow di agram It al so looks like an inverted Idaho or something. It's five acres. I didn't buy the full 20 -acre I ot of Iand. And so the ten acres just south of my house
is conveni ently where Ameren transmission is going to put their line through.

The yellow Iine is about 100 yards frommy house, and that's about hal fway to where the bl ue line is, whi ch is where their line is going to be. So just by ground level, it would be probably -- l'm guesstimating -200 meters or less to my house fromtheir line.

If you look at the diagraml made underneath it, when I went to the open house with Areren transmission -- and I hate to call them Mark Twain. I think that's an offense to one of our state fathers.
( Appl ause)
MR. HADW GER: Thei $r$ ni ce publ ic rel ations di agrams portrayed a flat curve, and so they depi cted every place -- or where their lines would go and where houses would be. But diagrans that would look very similar to this one underneath it. Now, this is my diagram not theirs.

And 200 meters fromthe power line is on a flatter ground. In reality, where that line is going through, that's a valley. And my front door looks out over it. It's very beautiful scenery. I'mgoing to have a hi gh power line goi ng across once that is done. But it's a vall ey.

And so if you look at my second diagram
most likely the distance between the power lines and my house is going to be less than 200 meters. That is a concern for me. I have Ieukemia. I have chronic Iymphocytic leukem a, which is not the same as the acute Iymphocytic leukemia that the studies all talk about.

। ammore vul nerable to other forms of
cancer, incl udi ng ALL, because of my chronic lymphocytic I eukemia. I don't own the I and that Ameren transmission is goi ng through, so there's no easement or any financial gain for me as they go through. My health will be at hi gher risk, l believe.

The studi es that compare national -- one of the studi es l've got on the back page there has a ni ce di agramthat shows what the el ectromatic -- magnetic radiation differences are bet ween microwaves and power Iines and things like that. But as other people have said toni ght, I don't run my microwave 24 hours a day. And those el ectric -- or those power lines will be operating 24 hours a day, seven days a week. So l thi nk my risk does go hi gher even though per item--

Basically, l feel like this is a case where l'm not going to be able to sell my house and move with my I eukemia because I have to be honest about the power lines goi ng right out in front of it. It's going to destroy the front porch view. And so l'mpretty much stuck in a
situation where if you approve them putting through these lines, it's going to be detrimental to me. I do ask you very humbly to reject thei r request. Thank you.
( Appl ause)
J UDGE PRI DGI N: Okay. Thank you. Greg Lawrence. If you'll raise your right hand to be sworn, pl ease.
(Witness sworn.)
J UDGE PRI DGI N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. LAWRENCE: Greg Lawr ence, G-R-E-G L-A-W R-E-N-C.

I want to say that this power line, once it got started and -- they're al ready figured out where it's going to go -- it's going right across two pieces of property of mine. One, it goes 425 foot frommy house. I've got to look at it every day if it's there. The next one is goi ng over another piece of property, which there's al ready a transmission line goi ng south -- north and south, and this one is going to cut east and west over the top of it. So think about how big of pol es they're going to have to use -- towers.

They just put up a U. S. Cellular tower behi nd the Mbose. They dug an ei ght-foot hol e, went down

33 foot, and put in 76 yards of concrete for that hol e. That's going to compact all my ground. I run cattle and row crop. The cattle on my property go underneath the trees for winter and summer. It's going to take out half of my trees, so how much are themtrees worth?

So I'mjust saying l'magai nst it. They're not doing anybody any favors out there by puting it in. And l've dealt with power lines before with power compani es when they cut out the Iocal ones. Wen they cut out brush under neath the trees, they tore $m$ fences out. And I'd call them Never would put them back in, so l had to do it myself. So that's what l'm going to have to look at for this deal, except a lot worse. I would respect that you guys do your conscious and vote agai nst it instead of your bank book. Okay. Thank you.
( Appl ause)
J UDGE PRI DGI N: Al I right. Thank you.
Kamra DeFries. If you'll raise your right hand to be sworn, pl ease.
(W) ness sworn.)

J UDGE PRI DGIN: Thank you. If you woul d, please, state and spell your name for the court reporter, and you may then testify.

Mb. DEFRI ES: Okay. Kamra DeFries, K-A-M-R-A D-E-F-R-I-E-S.
l'mhere on behalf of my family. I have four children, and my husband is here as well. Our story is much like the others that you heard. Our home is built on 99 acres, at the top of a beautiful hill and it overlooks some beautiful bottomgrounds and forest area. We have a view that allows us to see for miles. We built our home in 2009, after our origi nal home here in Kirksville was burned in a fire.

We rel ocated to this new property in hopes to build a farmand raise our family. We' ve been working hard to improve the I and and make it a farmthat we can enj oy the rest of our lives.

Li ke I said, we have four children. Thei r ages are 12, ten, seven, and four. We have cattle and horses and other -- many other farmani mals -- chi ckens and all that. We have a new pond behi nd our home. And like I sai d, we just really look forward to spendi ng the rest of our lives there with our family in our own little special pl ace.

The bad news is, like many others, ATXI is pl anni ng to run their power lines di agonally across our 99 acres, fromthe northwest corner, basi cally strai ght through to the southeast corner. And it will cross behi nd our home. Our vi ew will be compl etel y rui ned, which is one of the main reasons why we built the house on this
particular place. It will come across the back of our house, across our pond, and then up next to our home, around 100 yards away.

It will decrease our property val ue si gni ficantly. I can al most guar antee you that if you were Iooking for a property and you found one with a beautiful vi ew, you would not want 345, 000-volt power lines right out your back wi ndow.

It will make the grazing and rotating of our cattle very difficult, if not impossible, with our el ectric fence. And my biggest concern is for the potential heal th risks to my children. They can tell me all day long that the studi es show that it's safe, there's only a slight risk, there's a small risk. I don't care how big of a risk it is. It's still a risk.

There is -- and, agai n , the don't really have any evi dence saying that there is no risk. So that's 24 hours a day that that voltage will be near my children.

ATXI has done very little to ensure that -they're trying to -- or to try to hel p property owners through this. I mean, as you' ve heard over and over agai $n$, it is cutting di agonally through peopl e's property. That is to reduce their cost and to make it easier for them They do not care about the farms and the families that they' re affecting.

ATXI has not even shown -- they can say that they have good reason, but I haven't seen any good statistics as to why this is necessary. They try to spin it that it's going to be a benefit for Mssourians. I was in the courtroomin Jefferson City when ATXI was suing the Public Service Commission, and their lawyers stated -their words were, "We should be exempt fromfiling with the PSC because we are not a public utility, and we do not provi de power to M ssouri residents." That was fromtheir I awyers. And I'msure you guys could find that on record somewhere.

So my hope is that you guys will take a look at the bi gger picture of this and not just go al ong with the big busi ness and the corporation and the money, and that you will look at how it's affecting the citizens of northeast Mssouri. Thank you.

J UDGE PRI DGI N: Thank you.
( Appl ause)
J UDGE PRI DGI N: Sarah Wi l cox- Hughes. If you'll raise your right hand to be sworn, please.

MS. W LCOX-HUGHES: I ' m Quaker. Can I

```
affirmp
```

J UDGE PRI DGI N: Yes, you may.
(Witness affirmed.)
J UDGE PRI DG N: Thank you very much. If you
woul d, please state and spell your name for the court reporter, and you may then testify.

MB. W LCOX- HUGHES: Sar ah, S-A-R-A-H,
WI cox, WI-L-C-OX, hyphen Hughes, HU-G-E-S.
JUDGE PRI DGIN: Al I right.
Mb. W LCOX- HUGHES: Go?
Okay. I just want to express appreciation for all of you being here, and al so for my nei ghbors and friends and people I don't know at Nei ghbors United who have spent countless hours of their time Mbnday evenings meeting, when I know that they have a lot of other things to do. So anyway --

Tell my story: My husband and I came to thi s area ei ght and a half years ago, full of dreans. And I was pregnant with our first of two daughters. We came to start an el ectricity-free, educational center where we could live cl ose to creation, serve others, and offer hospitality and training to those wi shing to do the same.

Si nce that time we have hosted thousands of people fromall over the country and the world for anything froma two-hour tour to a stay of one or more years. Our project has inspired and facilitated the creation of many like- minded projects, and several friends have moved to the area, resetting the countryside around us, using little or no el ectricity fromthe grid on their farms and homesteads.

Together, my nei ghbor Teri and I homeschool our four children, doing our very best to raise them with a sense of awe and reverence for this beautiful land we live on. As my nei ghbor Dawn MIIer and l call it, paradise.

Mbre children may join our school
cooperative in the future. Teri's land and thus our school and my daughters' favorite play place is slated to be i mpacted by the proposed line. It goes without saying that a hi gh-voltage power line running this little nei ghborhood and homeschool collective that was built specifically around the principles of simicity and low energy use would be a great irony, a devastating heartbreak, as well as a health hazard, according to the Wbrld Health Organization which specifies that children are particularly susceptible with up to a 70 - percent increase in childhood leukemia cl ose to such lines, anong other risks.

It's difficult to say whether all the families in our nei ghborhood would choose to say, despite all of the beautiful buildings we have built by hand, the hundreds of native and cultivated our trees we have planted, the soils we have amended, the loving rel ationshi ps we have nurtured, this beautiful Iand and its i nhabitants, both human and non-human.

I believe that our educational project has added to our local economy, offering our vol unt eer services
in town and to the uni versity, attracting more residents to a depopul ated area, bringing in tourists that support local hotel s, train station, airport, farms, and businesses.

All this talk about Ameren's line being good for the local economy, while l believe it may do some good but that it would do far more harmthan good. The true economic advantage would go to Ameren Illinois while Mssouri farns, forests, and homes are ravaged.

Ameren is not seei ng or presenting the cost of projects like ours leaving the area, or farmers' losses from property damage or destruction, damage to wildlife habitat which al so incl udes lessened hunting and hunting tourism di minished property val ue, as seen in my nei ghbor Brent Coursey's example, health problens, demoralization, and depression of residents, and the inestimble cost of the lost beauty of M ssouri's inval uably sweet and humbly gor geous I andscapes.

I know that this power line is not necessary. I know it deep down because of the way l live -- a rich and meani ngful life without el ectricity; and the way m friends live with solar panels enough to meet their el ectricity needs. Americans can use less el ectricity and live better because of it. We can turn off lights, dry our cl othes in the great out doors, sing songs together, or visit each other for entertai nment.

169
l'mfully aware that not everyone wants to Iive quite as ruggedly as we do in this day and age, but there is a great spectrum and l guess we're on the far end. But this push for more el ectricity that's supposedly to support the peopl e's needs -- but l say that the people have become pawns to the corporations. Ameren is no I onger serving our needs. We are being used to serve their need for expansion and profit by using more, by becoming transfixed and sedate consumers.

And now the people in this room and many others are being demanded to sacrifice something absol utel y sacred to them to hand over this beautiful Iand that we have so caref ully, loving -- been loving and stewarding.

I say no, it's not needed. Let's get back into bal ance. Who is serving who? And by the way: Who is serving creation and who is serving God? I feel that this is a time when God is calling us to use less energy, not more. Our very planet, our only planet, an intimat y i mmeasurable gift fromthe creator is in great peril. It is not the time to be bulldozing through forests for the sake of the corporate bottomline.

I do not support huge grids, even if they do not -- even if they do use some anount of alternative energy, nor do I support coal. I know that if we need energy we can do better by using local alternatives like
private sol ar power. And if Ameren wants a way to make a profit, let themjump on board and start desi gni ng and installing private systens like this. That way they could really claimto be doing something ground- breaking and interesting in this area.

Thank you, and I will cut the rest of it short. But l ask you to pl ease -- please not give them permission to build this power line.

J UDGE PRI DGI N: Thank you.
( Appl ause)
J UDGE PRI DGI N: Anna Hughes.
UNI DENTI FI ED SPEAKER: Her testimony was turned in.

J UDGE PRI DGI N: Thank you. Bar bara Stone. If you'll raise your right hand to be sworn, please.

ME. ALBRI GHT: My name is Vi ctoria Al bright and I'mreadi ng Barbara Stone's testimony.

JUDGE PRI DG N: l'Il still need you to rai se your right hand to be sworn, please.

MS. ALBRI GHT: Affirm
JUDGE PRI DGI N: Affirm
MS. ALBRI GHT: I'd appreciate it.
J UDGE PRI DGI N: Yes, certai nly.
(Witness affirmed.)
J UDGE PRI DG N: Thank you. If you woul d,
please state and spell your name and then state and spell the name of the person for whom you're testifying, and then you can testify.

Mb. ALBRI GHT: Okay. My name is Victoria Al bright, V-I-C-T-O-R-I-A A-L-B-R-I-G-H-T. And I'm testifying for Barbara Stone, B-A-R-B-A-R-A S-T-ONE, in opposition of the Mark Twain transmission project.

Number 1: Heal th impact. I'm concerned with the unknown health impact on families and livestock and the lack of public disclosure of the expected heal th impact of the 345,000 -volt transmission line in northeast Mssouri.

Two: Emi nent domain. I am concer ned about the precedent this project would set if this corporation were granted eminent domai n . It is my understanding that in thi s case, the taking of private land is not for local use -- local public use, therefore not for the purpose of benefiting the general public locally. This is a project of Ameren IIlinois, an entity outside of Mssouri, with intent to transport el ectricity not for the benefit of M ssourians. The public would be better served by local generation of renewable energy and energy conservation.

Three: The absence of county commissi oner approval. It is my understanding that our el ected Adai r County commissioners have deni ed approval of this project.

Four: This line is not in the public interest. Ameren customers will bear the cost this expensive transport of el ectricity.

Si gned by Barbara St one.
And I would like to make a short addition to my testimony in Schuyler County Iast ni ght. I want to explain something about the difference bet ween an adult body and that of a child or a devel oping fetus.

The rate of growth in cellular function in an infant or for a child or a young child is astronomical compared to that of a 40-year-ol d construction worker. That is why they are so susceptible to damage fromEMFs or chemi cal s or other carcinogens. I ask you to bear this in mind in your consi derations and to not approve Ameren IIIinois. Thank you.
( Appl ause)
( WHEREI N; Exhi bit 10 was marked for identification.)

J UDGE PRI DGI N: Thank you. Gena Briggs.
MB. BRI GGS: Good eveni ng, agai $n$.
J UDGE PRI DGI N: Good eveni ng. If you' I। pl ease rai se your right hand to be sworn.
(Witness sworn.)
J UDGE PRI DG N: All right. Thank you. If you would, please state and spell your name for the court
reporter, and then you may gi ve your testimony.
Mb. BRI GGS: My name is Gena Briggs, G-E-N-A
B-R-I-G-GS. I amreading two testimoni es toni ght. The first one is my husband's, Billy Briggs, B-I-L-L-Y B-R-I-G GS.

He says: I see no need for this power line. Ameren says the line is to provide low cost energy, but to whom l'mpositive my el ectric bill will never decrease, and it will probably increase to pay for a transmission Iine that will not benefit Mssouri.

ATXI's CEO and executives aren't going to take a pay cut to provi de low cost energy to consumers. I believe it would infringe on my right to farmby limiting $\mathrm{m} y$ farming methods and reducing production.

At the Schuyl er County meeting last ni ght, someone made a great anal ogy of a basketball court -- our farms -- with one single chair -- a power line pole -- on it to have to play -- to farmaround. A small i nconveni ence, but we' d get used to it. The thing is that the game would forever be changed.
l'd like to expand on this anal ogy. We have our court with one chair to pl ay around, and then someone adds a couple more chairs, and then another, and another, until our court is entangled with chairs to the point of not being able to play at all.

My farmhas two different Ameren power Iines runni ng perpendi cul ar, and ATXI is wanting to add a third. We' ve suggested to Ameren representatives that they use exi sting right-of-way, either line, and was dismissed i medi at el y .

In closing, I would like to say that putting all of your power into one national grid might not make it reliable or stronger, just a bi gger target. I believe a better sol ution is to invest in upgrades to exi sting coal-fuel power plants using bi of uel with conbi ned turbi ne technol ogy, sol ar and wi nd power. The old adage of not putting all your eggs into one basket makes great sense to пе.

Thank you for your opportunity to express my heartfelt feelings toni ght. That was --
( Appl ause)
MS. BRI GGS: The second one is froma gentleman named Hassan Hall. His spelling is H-A-S-A-N H-A-L-L, and he is from Scotland County.

I write to you now in opposition of the Mark Twai $n$ transmission line. I am not opposed to needed growth, though I believe that this project will do more damage than good toward what we do need now.

I believe that we are -- what we need is a soci ety of people that care for the planet that they live,
for without this care, we will make choi ces that do not take care of this planet, this planet that we rely on for sust enance.

I bel ieve that in order to take care of a pl ace we need to care about it. It's really simple, though something that seens to be missing is so much of what we do. I believe that the care that is needed is something we need to cultivate, and this takes time: Time for connections and rel ationshi ps to farm-- to form Sorry.

I believe that if these connections and rel ationshi ps are broken that life seens much less worth living for, and that l want to live in a soci ety that's full of people that have as many reasons for Iiving as possi ble and our planet that can sustain us. Thank you very much, Hassan Hall.
(Appl ause)
MS. BRI GGS: And gentlemen, I woul d like to add some information. You guys were asking about the open house meetings. The open house meetings that they were tal king about that was at the church was hel d Thursday, October 30th, 2014. It was in Kirksville. Thank you, guys.

J UDGE PRI DGI N: Thank you.
CHAI RMAN HALL: Excuse me, ma' am Were you present for that open house?

MS. BRI GGS: You bet I was.
CHAI RMAN HALL: And so the statements made by ot hers here that they were forci bly renoved fromthat open house for whatever reason, were -- di d you witness any of that?

MS. BRI GGS: It was absol utel $y$ the truth. My husband was not allowed in the building at all.

CHAI RMAN HALL: And was it expl ai ned to him why he was not allowed insi de the building?

MB. BRI GGS: We were supposed to si gn in upon entering the building, and when they figured out that my husband was one of the five families that had gone to court and intervened with -- at Cole County in Jefferson City, they stopped himat the door. I got in before they got me stopped. And I wound up tal king to three representatives and two security guards because I refused to si gn up. I kept asking them why I had to sign anything, when I had my letter of admission and my invitation in my hand. None of them could gi ve me an answer. But l wound up si gni ng. Honestly, I did not sign my name. I just si gned a name. And that satisfied them

CHAI RMAN HALL: l'mjust -- l'mputting Ameren on notice that -- I intend to ask further questions about this at the evi dentiary hearing in Decenber.

COMM SSI ONER RUPP: Same thing. I will be
asking.
(Appl ause)
COMM SSI ONER RUPP: So I really want to clarify. Was it a sign-in sheet? It wasn't a statement of you're not going to record this or anything? It was just --

MS. BRI GGS: It was just -- it was a si gn-in.

COMM SSI ONER RUPP: It was a sign-in?
MS. BRI GGS: Just wal $k$ through the door . Here, si gn your name on her book, and then you can enter our proceedi ngs.

MS. BRI GGS: Just the name.
J UDGE PRI DG N: Thank you.
UNI DENTI FI ED SPEAKER: (I ndi scer ni bl e).

UNI DENTI FIED SPEAKER: They were filming.
MS. BRI GGS: They were filming, I guess, and when we si gned, they were asking us if it would be all right to have our permission to be filmed, which by Iaw
they' re supposed to do anyway.
COMM SSI ONER RUPP: Thank you.
MS. BRI GGS: Thank you.
J UDGE PRI DG N: Al I right. Thank you. Dana MEGuire. If you'll rai se your ri ght hand to be sworn, pl ease.
(Witness sworn.)
J UDGE PRI DG N: Thank you very much. Pl ease state and spel l your name for the court reporter, and then you may testify.

MG. MCGUI RE: Okay. I have al so my husband, Gavai n U' Pri chard. He's next on the list, I thi nk.

J UDGE PRI DG N: Okay.
MG. MCGUI RE: What di d you tell me to say? My name.

J UDGE PRI DG $\mathrm{N}: ~ \mathrm{I}$ ' m sorry. State and spel l your name.

MS. MCGUl RE: Dana MEGui re, D-A-N-A M C-G-U-I-R-E.

Maybe l'Il read Gavai n's first. We di dn't know we had five minutes, so these are short.

J UDGE PRI DG N: Okay.
MG. MCGUl RE: The basic reality of our time is that we live with the constant danger of corporatocracy. We' re expected to gladly pl ace our fut ure in the hands of
compani es that are, by desi gn, anesthetized to local concerns, traditions, and envi ronment al stewardship. They are designed to maximize profit by using the economy of scal e to drive their product or service to the market place, regar dless of the challenges or resistance.

Too often have local and state level oversight committees and regul at ory bodi es been treated as the adversaries to a presumed right to pursue their busi ness model s on the part of large industries.

ATXI's vision of the future is one where the communities in NEMD play second fiddle to their more highly prized and Iucrative clients to the east. They would be more than willing to make NEMD yet another rural sacrificed zone with their har ff ul, high-voltage transmission lines. They' re counting on government complicity in imposing their vision on modern for-profit -- of modern for-profit power, not a di stributed grid of alternative energy which would serve NEMD, al ong with everyone el se.

They betrayed their callous di sregard for jurisdiction and proper oversight in their opening ganbit when they sued this very commission, cl ai ming that the PSC has no authority to regul ate the Mark Twain power Iine because Mssourians are not customer clients of the project.

Can you i magi ne a worse precedent to let
stand? Shall we let every corporation with an industrial project on its drawing board deny oversi ght and veto to the very communities which will be debilitated or destroyed by these projects on the thin reasoning that these commities are not loyal customers of sai d compani es?

There are many visions of the future, and ATXI's is Di cki nsoni an in its rejection of communal well-being and jurisdiction for both profit motives. It has no pl ace in NEMD.
( Appl ause)
MS. MCGUI RE: My name is Dana MEGuire, and I Iive with my husband on a little tounstead in Edi na knox County. We came to live in northeast Mssouri because even though we di dn't actually -- we didn't exactly fit in -and I never fit in anywhere -- it kind of felt like home, you know. We -- if we want to build a structure on our I and and it looks goofy, people might not like it and they mi ght laugh at it, but if it isn't hurting anybody, they'll let us make our own choi ces about how we live.

I can homeschool my children. I can buy raw milk froma farmer up the road. Many places in this country restrict the way Americans can live, but here we feel pretty free to live our truth, and we know how to be a good nei ghbor at the same time.

A few years ago, my husband and l began

181
TI GER COURT REPORTI NG, LLC
catching up on the I atest science surrounding climate change. Hear me out. I needed to know what was happeni ng, because I have four children. And I've lived in many places and l've been seei ng that all over the country extreme weather has become normal. I've become obsessed with -- we became obsessed with understanding the climate situation. We read a book. We read about the data that's been measured by thousands of teans in hundreds of fiel ds of science fromall around the planet. We dug into every argument, scientific or not, of concern about or disregard of climate destruction, human cause forming, historic climate changes like little Ice Age, sol ar flares, geoengi neering, government al conspiracy, and most i mportantly we studi ed who is paying for all these studi es and which scientists and climate spokespeople are paid by whi ch industries.

We pi eced together the bi g pi cture. And horror of horrors, we learned that the situation is much more dire than any of our governments, politicians, or corporate I eadership are tal ki ng about. The right is dead wrong about climte change, but so too is the left.

Over two years ago my husband and I set asi de our day-to-day lives and began marching Iong di stance fromstate to state, pulling our children in carts and wagons, passing out climate information sheets. It was
extremely trying for us, but we were compel led to act, to do something, anything, to call attention to the situation. In retrospect, it was a desperate, yet sane, response to a dire threat.

Last year, we wal ked all the way to the east coast. We met lots of people who were apathetic to our cause, as they percei ved it. Many people who thought what we were doing was cool, more important, and many ot her peopl e you will be surprised to hear who thought that we were misgui ded and foolish for one reason or another.

But one thing l wasn't surprised to di scover as we wal ked across the country and tal ked to all these different people -- you know, people who are giving us the hai ry eyeball -- is that we all agree about one thing -where aml?

J UDGE PRI DGI N: That's your five minutes. Are you taking your husband's five?

Mb. MCGUI RE: Oh, yes. Pl ease. Thank you.
J UDGE PRI DGI N: You may proceed.
MB. MCGUI RE: I am al most done. Al most
done. Come on, brai n.
Everyone who is taking a moment to look up at our surroundi ngs and to understand our times, trying to understand, we all know that this is the begi nning of the end. We all know that corporate control over the best
interest of citizens is a joke. We know that our ci vilization has taken far more than our share, and that
 wrath of God is our doom

I'mhere toni ght to report that we fight agai nst Ameren's Mark Twain transmission line not only because our own nei ghbors' rights, health and well-bei ng are directly threatened by this proposed monstrosity. I'm here to sound the al armthat wi nd power -- graceful and romantic as it may seem-- is not the answer.

The fact is, currently, there is no answer.
Our trajectory, as we all deeply suspect, is a downward spiral. We fight this battle now knowing that it is but one of the first battles that we are wakening to in the final order for resources and survival that is our children's future. Let us set a precedent now that Mssouri does not answer to corporation. Thank you.
( Appl ause)
COURT REPORTER: ME. MEGuire, what's your husband's name?

J UDGE PRI DGI N: And I understood that the next witness was Gavain U. U'Prichard, but that --

ME. MCGUI RE: The next was him I read for hi $m$

J UDGE PRI DGI N: All right. Will you spel I

EA- 2015-0146 - VOL. 4
that name for -- G-A-V-I-N?
MS. MCGUI RE: G-A-V-A-I-N--
J UDGE PRI DGI N: Last name, U --
MS. MCGUI RE: U, apostrophe,
P-R-I-C-H-A-R D.
J UDGE PRI DGI N: Thank you.
COURT REPORTER: Thank you.
J UDGE PRI DGI N: And I bel i eve the next witness is Victoria Al bright, but I believe we' ve al ready heard from her --

MB. ALBRI GHT: Yeah.
JUDGE PRI DGI N: -- was my menory.

I believe you testified last ni ght; is that correct?
MS. MEYER: I read someone el se's statenent.
J UDGE PRI DG N: Very good. Thank you. If you'll cone forward. If you'll raise your right hand to be sworn, pl ease.
(W) ness sworn.)

J UDGE PRI DG N: Thank you. If you woul d, pl ease state and spell your name for the court reporter, and you may then testify.

MS. MEYER: Kaitlyn Meyer, K-A-I-T-L-Y-N M- E-Y-E-R. And I'mactually going to read anot her -- a
statement for someone el se first.
J UDGE PRI DGIN: Al I right.
MS. MEYER: And her name is Emily Harrison, E-MI-L -- E-MI-L-Y H-A-R-R-I-S-O-N.

And she says: The Truman State Uni versity Collegi ate Farm Bureau stands with the Adai r-Schuyl er County Farm Bureau in opposition of the Mark Twain transmission project. This project will have a negative i mpact on producers by decreasing property val ues and interfering with everyday agricultural practices.

That was hers. So I would like to start off by saying thank you to the Public Service Cormi ssi on for allowing concerned citizens to have our voices heard toni ght. I'ma student here at Truman, and I became i nvol ved with Nei ghbors United Iast fall when I heard about the Mark Twain transmission project and how it would affect the people, I and, and non-human creatures al ong the line. Thi s transmission line will not be going over or near I and I live on, but l still consider myself to be affected.

This is a community which I have cone to call home. I will one day be a landowner, and I know that the property l plan to own, raise a family on, be a steward of and grow food on could just as easily become j eopar di zed, too.

Although I have become deeply invested in
this project and have learned extensi vely how it will have negative impacts, l don't think it takes some sort of engi neer, specialist, or hi ghly educated person to realize that this proposed line is not in the best interests of the publ ic.

To me, this is about common sense. If someone is the owner of a land, they should, at the very least, have a say in what can be done with it. Mbst of us would never let a stranger come onto our I and and do with it what they please. It seens as though the only reason ATXI is getting away with this is because they are a corporate entity with a great amount of power. And it just doesn't seemright to me.

I realize that some of the suggested alternatives to this project may cost more money, but the economic costs are only one piece of the puzzle. Shoul dn't the non- monetary cost be taken into consi deration as well? And if the purpose of this project truly is to serve people, why is money being gi ven priority?

As we heard last ni ght and toni ght, nearly every person who testified in favor of the project supported it because of the projected economic increases it would bring. And I have trouble supporting something that is mostly bringing in money that will make a few weal thy peopl e even weal thi er.

I think it is important to point out that yes, l do use fossil fuel s in my daily life, but this is not something I do because I want to. And I know that many of us use el ectricity and depend on power lines. So it can be hard to say that this project shoul dn't happen, because there are probably transmission lines goi ng through ot her peopl e's land that is supplying the energy we use as well.

However, perhaps we should not rely on a system of suppl ying energy that causes so much envi ronment al degradation or di st urbance to the I and and peopl e.

I think it is time to stop operating with the ignorance is bliss mind set and instead start truly consi dering the consequences of our actions. I do not bel ieve the ends justify the means in situations that i nvol ve destroying the pl anet and its people al ong the way. As someone who's going to have to grow up living with the consequences of the decisions made by those wholived bef ore me, I ask you to sincerely consider the impacts this will have.

It is easy to oppose a project from whi ch
you will only benefit and not have to bear the burden of forever, but there are people that will. This project is not in the public interest, and l ask you to please deny ATXI permission to build this transmission Iine. Thank
you.
( Appl ause)
J UDGE PRI DG N: Al I right. Thank you. I apol ogize if I mispronounce or misread the next thing, but is it Glen Mbritz?

MR. MDRI TZ: Thank you.
J UDGE PRI DGI N: I was cl ose.
MR. MDRI TZ: You're very good. My writing is horrible.

JUDGE PRI DGI N: Could I ask you to rai se your right hand to be sworn, pl ease.
(Witness sworn.)
J UDGE PRI DGI N: Thank you very much. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. MDRI TZ: My name is Glen Mbritz, G-L-E-N M O-R-I-T-Z.

Thank you for the opportunity to be here toni ght. I'mthe mayor protem and past mayor of Kirksville. I don't see myself so much as a politician, but as an indi vidual who really serves the public to look after thei $r$ best interests.

I was a champi on of the human rights ordinance a coupl e years ago, the onl y human rights ordi nance north of I-70; seni or housing, et cetera. So
yeah, I have great compassi on for the concerns here.
As several have spoken earlier, yes, the Kirksville City Council did send a letter earlier this year to the PSC denouncing this effort by Ameren because, from our aspect, the eminent domai $n$ was si mply not legal use of it. The City of Kirksville certainly does not misuse that type of law as this is being proposed.

It's probably good. I misplaced my notes. But just because we' ve heard so many ot her fine speakers before me, I just want to affirmso many of the intelligent and al beit enotional remarks that have been gi ven, whi ch l'msure were deeply, deeply fromeach person's heart.

Agai n, I just want to affirmthat the Kirksville City Council is definitely against this proposal. Thank you so very much for giving me the time toni ght.
( Appl ause)
J UDGE PRI DG N: Al I right. Thank you. And agai $n$ I apol ogize if l get this next name wrong. I believe it's Rick or Rich. The next name starts with an "R." And then, I'msorry, I can't read it. Nobody is clai ming that one?

All right. Becca El der. If you'll please rai se your right hand to be sworn.
(Witness sworn.)

J UDGE PRI DGI N: All right. Please state your name and spell it for the court reporter, and then you may testify.

Mb. ELDER: Becca El der, B-E-C-C-A E-L-D-E-R.
l'd like to start off with saying thank you for hearing concerns of the people who would be most directly paying for this transmission line. l'ma student at Truman State Uni versity, and I consi der northeast M ssouri to be my home and these people to be my nei ghbors.

Through my studi es, I am continuously confronted with data stating facts about the degradation of our home, many of whi ch would only be worsened by this transmission line. Every day ecoci des, whi ch are the willful killing off of ecosystems, are cormitted, such as mount ai nt op removal and def orestation when our ecosystens are so preci ous and we know that our exi stence and conti nuation rel $y$ entirel $y$ on them

This transmission line would clearly devastate ecosystens and destroy habitats as my professor, Dr. Kel rick, has mentioned.

Additionally, our current economic system has created a plethora of social injustices where people are denied and stripped of basic human rights such as access to clear air, cl ean water, and heal thy food in

191
TI GER COURT REPORTI NG, LLC
exchange for the thi ngs that actually are unnecessary in the name of a thing that we call progress.

I often wonder: Who made the decisions that have allowed for the envi ronmental degradation that have in turn caused for the suffering that we see today, deci sions that took away these basic human rights in order to make temporary products or provide temporary el ectricity? What were the val ues of these people? They surely did not val ue the heal th of $m$ generation or of fut generations.

I suspect they val ued economic growth and naterialistic progress. Perhaps they did not know the out come of thei r trades. However, as I face story after story about loved ones who are dying of cancer and people around the world who are dying because other corporations came in and destroyed the nat ural resources of their homes, I argue that we have the wisdomand ability to make better deci si ons.

I pray for those who have the authority to choose how we use our home to protect my nei ghbors and all of our fellow inhabitants of this planet.

This transmission line is not necessary.
Ri ght now, we can begi n working to gi ve future generations a chance at havi ng access to basic human rights so that they will not be al so conf used by the suffering around them as a result of the deci sions today by us.

I ask that you val ue the livelihoods of these people and realize the importance of their message and the significance of your decision in this project. I've heard stories like these of my nei ghbors too many times, and I've al so heard Ameren's story of progress too many times.

If we listen to these people and deny Ameren the right to build this power line, we can start writing a story of a different kind of progress, one of equality and health, nourishing of life and liberty in the pursuit of happi ness. This is a story future generations can be glad for and grow from Let's start writing it now. Thank you.
( Appl ause)
J UDGE PRI DGI N: Al I right. Thank you. I hope I'm not mispronounci ng this name, John Leunen.

MR. LEUNEN: You di d good.
JUDGE PRI DGI N: If you'll rai se your right hand to be sworn, please, sir.
(Wtness sworn.)
JUDGE PRI DG N: Thank you, sir. Pl ease state and spell your name for the court reporter, and you may then testify.

MR. LEUNEN: My name is John Leunen, J-OH-N L-E-U-N-E.

And I had a lot of thi ngs to say toni ght,
but l'mgoing to cut it short because we're late. The first thing is ATXI has a motion to compel before your committee tomorrow. You're going to make a decision on that. I believe that's an unnecessary motion, because they al ready have all the information they're asking for. They have all our names, all our addresses, all our phone numbers. They have all our parcel numbers, all the power lines al ready on their maps. I have pictures here of my own place and several other properties to show all the power lines they're asking us to furni sh them with. And I know they have all our information because l -- it's on that, and l al so work for the assessor's office in Schuyler County, and all of their requests have been filled up there -- all information they' ve asked for.

The second thing that I have is your favorite word tonight: Diagonal. Everywhere this power line goes, it's diagonal. It doesn't cross my property. It cuts across it, passes the corner of it. 422 feet -they just measured on thei r map -- frommy home is the center of the power line. 300 feet fromthe corner of my property line is their right-of-way. And this line just -there's no need for it to come di agonal that close to that many houses. There's five houses in a cl uster. They're coming right through the center of us. None of us are more than 750 feet fromthis power line -- fromthe actual line,
not the easement. There's no reason for that.
Thi s line comes out of Iowa fromnorth of Ottuma on that power line. They're using their existing 161 right-of-way and they're building a -- what they called a double-circuit. They're going to bring back down to 345 and a 161 on the same easement -- 150-foot easement, one on top of the other. That's according to M d-American Energy's brochures online.

Why does it have to come into Mssouri -- it can be split into two lines -- and run diagonal all over the place? It just makes a big loop as it comes in and then comes back into Kirksville, just cuts up everybody's property all the way down the line.

There's no reason they can't run it down the exi sting 161 that is there, and that is a straight line, practically, fromthe lowa line to the substation here in Kirksville. And there's -- it doesn't impact any more homes, any more properties. It adds 50 feet to thei $r$ easement, and that's all it does. And they could run everything they need right there, just like they're doing in Iowa.

That's really all I have to say. I have some information here that l'mgoing to leave with your court of these maps showing where these houses are and the lines and the properties where they come in. Actually,
they come in at the north end of our county and they come down about two and a half miles, and they run parallel to each other, actually taking a 250-easement out of all of those properties for the first two and a half miles. And then they split up and go di agonal for about 12 miles bef ore they Ioop around and come down agai $n$ and go di agonal back into Kirksville. And I don't think there's any need for doing that.

I requestfully respect -- or ask you to deny thei $r$ permit and send them home and tell themto rework their plan and come back with a compatible plan, if this Iine is that necessary, something that will work for everyone -- all the Iandowners and Ameren, not just Ameren.
( Appl ause)
MR. LEUNEN: There's a whole packet for you. Thank you very much.

COURT REPORTER: Thank you.
( WHEREI N; Exhi bit 11 was marked for identification.)

JUDGE PRI DG N: All right. Thank you. Is there anyone on -- who si gned up to testify toni ght that । asked to go to the back of the line who has not had a chance to testify? I see a hand. All right. Wbuld you please state and spell your name for the court reporter.

MR. DAVI SON: Ter ry Davi dson, T-E-R-R-Y
D. $\mathrm{A}-\mathrm{V}-\mathrm{I}-\mathrm{S}-\mathrm{O} \mathrm{N}$.
(Winess affirmed.)
J UDGE PRI DG N: Al I right. Thank you. When you're ready, sir.

MR. DAVI SON: First, I have a brief irony for you. This evening I was -- came in and I sat down at the computer to write some notes, and the power went out. So I had to fire up a generator. So I suggest maybe we should spend our resources here in Mssouri on infrastructure locally rather than interstate commerce.

I'ma local I andowner. We have -- I've lived on the same farmall my life. I live in a house my granddad built. I think I'ma fifth generation here. Same story as many people here.

Ameren's line would di ssect our farm di agonally 8, 000 feet, according to their map in the Days Inn, covering two sections of Iand. All that I and we have, it goes to two ponds. It goes across 15 acres of wetland. There's livestock, row crop, timber, pasture, timber. Same story everyone el se has.

But first l'd like to speak rather than a Iandowner as a citizen. I know you guys said you don't deal with eminent domin, yet we do deal with Iand acqui sition. And that's something that all of us are concerned with. The big issue for us all is land
acqui sition and the results of that acqui sition.
I will say, though, that the whole process of acquiring land for the benefit of the whole has changed over time, especially the past couple generations, to the extent that initially, as has been stated before, the intent was something that was necessary for the popul ous, not something that was maybe necessary.

We have a line here that being everything you' ve heard we don't know what's going to go on in lowa, so really their bridge to nowhere, it may be a wire to nowhere.

I would submit that due diligence on our parts as Mssourians will be to ensure that if the line is built at all it should be guaranteed a process end to end or not be built at all. That's our obligation as Mssourians.

Construction of this project is another concern of mine, as is many. Compaction has been noted. We would have probably -- based upon the information they gi ve me at Days Inn, around ten towers on our place, each one requiring excavation of a lot of land. They told me that the dirt would be taken out and spread out across the top of the top soil, putting old clay dirt on top of top soil, destroying it forever.

Li vestock running adj acent to this during
construction will either be put at risk or have to be moved sormewhere el se.

My son has a bi g conbi ne, and we' re trying to figure out how we can get that conbi ne across this di agonal line to the other side of the farmbecause there's no way we can go, because we were al so told down at Days Inn that any conbi ne that was so hi gh, it can't be run under neath the power lines.

The probl ens are al most endl ess. The question again is: You see the personal tragedi es here. You see the lives of -- we have to ask oursel ves as M ssourians: Is this something that our founding fathers woul d've intended? Okay. To take our I ands for not somet hing that is absol utel y necessary. Ameren has different -- hasn't gi ven any demonstration that someone will be without power if this line isn't generated. So I submit that we need to thi nk about that.

I recall 30 years ago, 40 years ago someone tol d me that by the year 2000 we would no I onger use petrol eum and we're still using it. Coal production wasn't getting it. I submit that we should reject this plan. Thank you.

## ( Appl ause)

J UDGE PRI DGI N: And I don't think I have anymore names on the list that I have overlooked. With the
under standing that we are very short on time, is there anyone el se who wi shes to be heard? I see a couple people -- more hands going up. All right. Whoever wants to -UNI DENTI FI ED SPEAKER: If there's somebody who wants to speak who hasn't been heard yet?

J UDGE PRI DGI N: That's what I was hopi ng for.

UNI DENTI FI ED SPEAKER: Prioritize --
JUDGE PRI DGI N: All right. If I can get you to state and spell your name for the court reporter, pl ease.

MR. ANDERSON: Cory Ander son, C-O-R-Y A-N-D-E-R- O-N.

J UDGE PRI DGI N: All right. And will you please rai se your right hand to be sworn.

MR. ANDERSON: Affirmed.
J UDGE PRI DGI N: Yes, sir.
(Winess affirmed.)
J UDGE PRI DG N: Thank you very much.
Whenever you're ready.
MR. ANDERSON: I recently moved to this regi on from Ohi o, and I was excited when one of my students here at Truman State Uni versity told me that there was a hearing on the Ameren this evening because I have been hearing about this utility line all the way back in Ohio a
coupl e years ago, making the news.
Why? Because there is a population in this regi on of the state that is one of the most promising economic engi ne generators for a rural area. There's a popul ation that is uni quel $y$ and solidly rural. And in M ssouri, they're growing in new settlements about the third fastest rate of all 50 states.

These are the Amish. I looked at the map and I've noticed that this line passes right near two Amish comminities that are growi ng very qui ckly. As a geography professor here, l track new Ani sh settlements. And in northern Mssouri al one, the popul ation of new Amish settlement has doubl ed from 2000 to 2010, and there's no si gns of this abating. The Amish are looking for rural I and, and Mssouri is home to lots of it -- and beautiful rural I and.

Quite a bit if l look around it's sort of untouched. It -- if -- there's issues with depopulation in this country in rural areas. And Ameren is a group that shows promise for picking up ol der homesteads, old farns that may no longer be used. And as l look at this line, it's cutting across many areas that are potential sites for new Amish settlements. They're springing up all al ong this regi on.

Having a new power line in the middle of a

201
TI GER COURT REPORTI NG, LLC
regi on of people who do not even use el ectric power of $f$ the grid is a little bit ironic. So l wish to bring that piece of evi dence as well to the case. I apol ogize l came a bit I ate this evening. I don't know if anyone el se here has mentioned that. But I at least wanted to add that to the pool of consideration.

You' ve got a popul ation al ong with the Mennonites and possibly even Hutterites coming down from the Dakotas. There's a new Hutterite settlement that just started in Mssouri this year -- the first one. And they' re looking for these rural places. A large power line is going to deter themfromsettling in these places. So thank you for your attention.
( Appl ause)
J UDGE PRI DGIN: Thank you.
CHAI RMAN HALL: You menti oned that the proposed Iine is going to run through two Ami sh communiti es?

MR. ANDERSON: I said it's going to go al ong the lines of two qui ckly growing communities.

CHAI RMAN HALL: Okay. Do you know the size -- population of these commities?

MR. ANDERSON: The Greent op community currently has two districts, which is approxi mately -estimated -- 50 to 60 househol ds, a househol d having
approxi nately six to seven people in it. The second is down in Gibbs. Currently, it's standing at close to 30 families, which is -- getting close to starting a second di strict. It's al so a much more spread out community. The popul ation of the Amish is doubl ing in America every 20 years. So if you look at that grouth al one, how many more are going to be moving to a region like this, especially if it's already attracting so many from other states and within the state?

CHAI RMAN HALL: And those are the onl y two Amish communities impacted by the line, that you're aware of?

MR. ANDERSON: Yes.
CHAI RMAN HALL: Thank you very much.
J UDGE PRI DG N: Al I right. Thank you. Is there anyone el se who has not testified in any local public hearings yet who wi shes to be heard?

MR. BI LLI NGTON: Yeah.
JUDGE PRI DGIN: If you'll state and spell your name for the court reporter, please.

MR. BI LLI NGTON: Roger Billingt on, R-O-G-R B-I-L-L-I-N-G-O.

J UDGE PRI DG N: Al I right. If you'll rai se your right hand to be sworn.
(Witness sworn.)

203
TI GER COURT REPORTI NG, LLC

J UDGE PRI DGI N: Thank you, sir. When you're ready.

MR. BI LLI NGTON: Corporate Ameri ca owns 90 percent of the wells in this nation, that leaves the cattlemen and the farmers to take care of the land. I rent grassland that's got 161, 000 volts through it. My cattle don't congregate under it. I've never seen any wildife of any type around that. I've never even seen a buzzard fly over it.

Thi s line will run approxi mately 200 yards from the water supply for my livestock, and it goi ng to run al ong 80 acres -- through this 80 acres, which is the best part of my farm All parallel lines under this transmission line has to be grounded. If this line is so safe, why does these fences have to be grounded?

John D. Rockefeller is a prime example of corporate greed. But guess what happened in the end? Guilt overcame his greed for impression and destroying so many people's lives he gave huge tracts of Iand back to this nation in the form of national parks.

This company bypassed cattle and
Rockefeller, a local rock hol d -- I'msorry -- Iocal banker here, and he done that for one reason: Because of the weal th that these people have.

Everybody wants to kill this coal industry.

What are you going to do with this coal? They're going to send it up to Chi na. And guess what? In approxi mately six to ten days we' re going to get the results of that through the wi nd currents.

My final thing, make sure that the decisions that you make for us that you can live with for the rest of your life. Thank you.
( Appl ause)
J UDGE PRI DGI N: All right. Thank you. Anyone el se who has yet to testify who wi shes to be heard? Anyone -- l'msorry.

UNI DENTI FI ED SPEAKER: I testified I ast ni ght.

JUDGE PRI DGIN: I will get to you if time allows. Just make sure. Is there anyone el se who has yet to testify who wi shes to be heard? All right. Anyone el se wi shi ng to be heard? I see some hands. We' ve got about 15 minutes.

MR. SI DWELL: I just want to comment on the Ietter I wrote to the Commission.

J UDGE PRI DGI N: You'll need to state and spell your name for the court reporter and be sworn, pl ease.

MR. SI DMELL: My name is David Si dwel I. Last name is S-I-D-WE-L-L.

J UDGE PRI DG N: If you'l| rai se your right hand to be sworn.
(Witness sworn.)
JUDGE PRI DGI N: Al I right. When you're
ready, sir.
MR. SI DWELL: Okay. I'd like to comment on
the Ietter I wrote to the Commission on April the 3rd, 2015 describing how 1 was treated at one of Ameren's so-called open house meetings. We were invited to come and ask questions. I came in and very nai vel y asked a question about the state Iaw that -- 229. 100 that says the counties have to have -- have to give Amer en permission to cross their county. And they just -- and they called over security and had me thrown out of their meeting.

And I'd just like you to -- this gentleman rai sed the issue of how Mssouri citizens were treated with thei $r$ so-called open house reetings, and I think they should be held accountable for it. l'd like to submit this. I've al ready read it to you all. If I can give this to the reporter for $\mathrm{y}^{\prime}$ all to --

J UDGE PRI DGI N: Absol ut el y .
MR. SI DWELL: Okay. All right.
J UDGE PRI DG N: Al I right. Thank you.
Madam Court Reporter, what is? 11?
COURT REPORTER: Thi s is 12.
(WHEREI N; Exhi bit 12 was marked for identification.)

J UDGE PRI DGI N: 12. Al I right. Thank you. ( Appl ause)

J UDGE PRI DG N: Okay. Anyone el se wi shi ng to be heard? Yes, ma' am Yes, sir. I see a couple hands. If you'll state and spell your name for the court reporter, please.

Mb. J ACK- SCOTT: Julia Jack-Scott. It's J-U-L-I-AJ-A-C-K hyphen S-C-O-T-T.

J UDGE PRI DGI N: And if you'll rai se your right hand to be sworn.
(Witness sworn.)
J UDGE PRI DG N: Thank you. When you' re ready.

MS. J ACK- SCOTT: I, similar to this
gentleman here, I just wanted to add for the record, si nce the cormi ssi oners seemto be interested in knowing more about these incidents about people being ki cked out of open houses, that my father was similarly ki cked out of an open house in Marion County for asking actually the same exact question that this gentleman asked, which was what they -Ameren intended to do with the support of all of the five county commissi ons.

And then he was escorted out by security,
bouncer people. And he was ref used readmittance to use the bathroom which I thought was extremely di srespectful. He's a very di gnified and respectful person.

And the second thing I just wanted to add was another testimony about the Amish commities affected. A lot of the Gi bbs Amish commity are my nei ghbors and friends, and l know that both the north and the south route in our area woul d' ve crossed through multiple Amish farns. And I know that they were all in opposition to that and were asking me and my husband for information because they had a lot of concerns.

And I encouraged themto speak out or get i nvol ved, and they said it was against their religion to do so, but that they were opposed to it. So l just want ed to state that, that there are Amish affected on the route.

J UDGE PRI DGI N: Al I right. Thank you.
Cormi ssi oner Rupp.
COMM SSI ONER RUPP: Yes. Thank you. You said it was your father or your father-in-law who was at the meeting?

MS. J ACK- SCOTT: My father.
COMM SSI ONER RUPP: Your father. And what's hi s name?

MS. J ACK- SCOTT: Hi s name is Howard Scott, HO-WA-R-D S-C-O-T.

COMM SSI ONER RUPP: And was this the same meeting in -- on Thursday, October 30th, 2014 at the Baptist church here in Kirksville?

Mb. JACK-SCOT: No, it wasn't. It was in Marion County.

COMM SSI ONER RUPP: This was in Marion County. Thank you. Do you happen to know when that was?

MS. JACK- SCOTT: I'msorry, but I don't.
COMM SSI ONER RUPP: You don't know the month, the year?

UNI DENTI FI ED SPEAKER: has it last year?
MS. J ACK- SCOTT: Last year they had two rounds of open houses, and the second round of open houses, it was that one.

COMM SSI ONER RUPP: Thank you. Do you have an address?

MS. JACK- SCOTT: I'msor ry, but I don't. I --

COMM SSI ONER RUPP: I'msure we --
MS. J ACK- SCOTT: I ' m not from Adai r Count y, so we had gone to just --

COMM SSI ONER RUPP: I am sure we can find it.

MS. J ACK- SCOTT: Okay. I'msorry, but I can't tell you that.

J UDGE PRI DG N: Thank you.
( Appl ause)
J UDGE PRI DG N: If you'll state and spell your name for the court reporter, please.

MR. BAMBRI CK: John Banbrick, J-O-H B- A-M- B-R-I C-K.

JUDGE PRI DG N: If you'll rai se your right hand to be sworn.
(Witness sworn.)
J UDGE PRI DG N: Thank you, sir. When you're ready.

MR. BAMBRI CK: Yes. I went to -- one additional comment about the open houses. I went to all three of them the -- that second round that Julia is referencing. And we had brought -- I went to get inf or mation, but l al so -- we brought flyers -- what we were researching. We wanted the public to know and people to know that we were getting different information that ATXI was gi ving. So I was handing out flyers, so I saw a I ot of people coming in and out.

I was not deni ed access myself, but l'm-when I started to see repeated people coming out and be Iike, "They just threw me out; I didn't even do anything" -- so I just want to state that I can say on the record I saw multiple people come out al most shocked that they had

210
TI GER COURT REPORTI NG, LLC
been removed for asking si mple questions.
I wanted to contrast what I've seen -- I've been to all three PSC hearings. And my experience has been that you all have been listening, been paying attention. You' ve been flexi ble when someone goes over five mintes. You work with us. This seens like an envi ronment where you're -- the kind of project that we want to be a part of and kind of government and community where people listen and respectful.

On the other hand, if you compare that to the open houses, it was a totally different thing for us. It was not openness. It was questions were cut off. We were shuffled through. People were kicked out. And I'm wondering if part of this PSC process should actually be -we don't have time toni ght, but to take more testimony about those open houses to get more of people's information about people who were mistreated.

Why that's important is even if you thought we should build this line, I don't think we should do it with ATXI. I don't thi nk we should build it at all, but so far this company has not demonstrated that they have our interests -- that they're trustworthy. Someone trustworthy would be able to answer questions and, you know, some level of di al ogue. So I think this should be strongly consi dered. Just by what we' ve seen of the character of
how its treated citizens, they shoul dn't even be consi dered for such a project. And they shoul dn't be --
( Appl ause)
MR. BAMBRI CK: They shoul dn't be all owed to, "Oh, maybe this route won't work. We'll go back and come up with a different route that might work." I think we've seen enough, and plenty enough of the spirit here. And I hope no ill will. I'mnot trying to be hateful towards ATXI, actually, we' re fellow human bei ngs. But the treat ment here just hasn't been something that we'll give over our I and and our property for this. So I just wanted to submit that. And I do thank you for your openness and quite the endurance to listen to all of this.
( Appl ause)
J UDGE PRI DG N: Al I right. Thank you very much, Mr. Bantbrick. Any questions?

J UDGE PRI DGI N: No questions.
J UDGE PRI DGI N: Al I right. Thank you. We are runni ng dangerously low on time. Is there anyone el se who wi shes to be heard before l see if any commissioners have any cl osing remarks?

All right. Chai rman Hall?
CHAl RMAN HALL: Very briefly. I want to thank you for the compassi onate, compelling, eye-opening testimony. It's heart-warming to me when I see the

212
citizens of our great state stand up and speak about thi ngs that are important to them And even more important than that -- I shoul dn't say more important than that, but al so i mportant is the transfer of information fromyou to us. We're going to take -- we're going to take this testimony seriously. We're going to consider it, and it will be i nvol ved in our final deci sion. So thank you.
( Appl ause)
J UDGE PRI DG N: Cormi ssi oner Rupp?
COMM SSI ONER RUPP: I have no comments.
Thank you.
J UDGE PRI DG N: Al I right. Thank you. And I will si mply echo Chairman Hall's comments. Thank you very much for your participation in this process, for your testimony, and simply for your attendance. We appreciate your input. And, agai $n$, we will -- we have evi dentiary hearings schedul ed in Decenber.

All right. Thank you very much. We are adj ourned and of $f$ the record.
( WHEREI N; Exhi bits 13 and 14 was marked by the court reporter)
( WHEREI N , the hearing was concl uded.)
