GENERAL REGULATIONS

2.12 Emergency Number Service (911 and E911)

2.12.1 Description

This tariff provides for Emergency Number Service (911 Service), which is an arrangement of Company Central Office and trunking facilities whereby a user who dials the telephone number "911" will reach the emergency report center for the telephone from which the number is dialed on may be routed to an operator if all lines to an emergency report center are busy. The telephone user who dials the 911 number will not be charged for the call.

Both 911 and E911 service are only available from Company switching facilities (where available) and via Company services that are equipped to provide and that do provide 911 or E911 service. The Company shall provide the PSAP only such name, address and telephone number information as the Customer shall provide to the Company, and for any 911 or E911 call, the Company shall only pass to the PSAP such information, including ALI an/or ANI data, as the Customer's facilities, network or station equipment shall make properly available to the Company's network and equipment for transmission to the PSAP.

The Company is obligated to supply the E911 service provider in the Company's service area with accurate information necessary to update the E911 database at the time the Company submits customer orders to the local exchange telecommunications company whose service is being resold pursuant to these tariffs.

At the time the Company provides basic local service to a customer by means of the Company's own cable pair, or over any other exclusively owned facility, the Company will be obligated to make the necessary equipment or facility additions in the E911 service provider's equipment in order to accurately and properly update the database for E911.

The Company will be obligated to provide facilities to route calls from the end users to the proper PSAP. The Company recognizes the authority of the E911 customer to establish service specifications and grant final approval or denial of service configurations offered by the Company.

The Company will collect 911 surcharges and remit all surcharge revenue to the appropriate governmental entity pursuant to RSMo 190.310.

2.12 Emergency Number Semite (911 and E911) (Cont'd)

2.12.2 Universal Emergency Number Service (911)

Universal Emergency Number Service (911) is a telephone exchange communication service whereby a Public Safety Answering Point (PSAP) serving the Customer's location may receive telephone calls dialed to the telephone number "911" from service users within a 911 service district.

Two types of 911 service are offered: Basic 911 (911) and Enhanced 911 Service (E911).

- A. Basic 911 Service provides for routing all 911 calls originated by telephones having telephone numbers beginning with a given central office prefix code or codes to single PSAP equipped to receive those calls.
- B. Enhanced 911 Service provides additional features, such as selective routing of 911 calls to specific PSAP and Automatic Number Identification.

The 911 calling party waives the privacy afforded by non-listed and non-published service to the extent that the telephone number, address and name associated with the originating access line location are furnished to the PSAP.

2.12.3 Emergency Telephone Service Charge

The Company may assess Customers a fee, on a recurring basis, non-recurring basis, or both, to recover the costs incurred by the Company for providing 911 service, and may, where permitted, also assess and remit appropriate surcharges or other amounts payable to public or other agencies that provide 911 services.

Because the Company's serving boundaries may not coincide with political subdivisions and 911 service district boundaries, the Company may assess standard fees and surcharges upon all service users served by a central office providing 911 service.

The services provided pursuant to this tariff do not include the monitoring of facilities to discover errors, defects and malfunctions in 911 or E911 services, facilities, or operations, nor does the Company undertake such responsibility. The Customer shall be responsible for making such operational tests as, in the judgment of the Customer, are required to determine whether 911 and E911 calls are functioning properly for its use. The Customer shall promptly notify the Company in the event the system is not functioning properly.

The Company's liability to the Customer, to any party dialing 911 using the Customer's facilities, or to any other party or persons, for any loss or damage arising from errors, interruptions, omissions, delays, defects, failures, or real functions of this service or any part thereof, whether caused by the negligence of the Company or otherwise, shall not exceed the amount equivalent to the pro-rate charges for the service affected during the period of time that the service was fully or partially inoperative. The Customer may be required to pay all of the Company's actual expenses incurred in obtaining or constructing the facilities, including but not limited to, any unusual maintenance costs or removal costs. The Customer assumes financial responsibility for all appropriate calling charges (including long distance charges, if any), generated by the use of this feature. Activation and deactivation of this feature is completed by the Customer.

Call Forwarding - Remote Access

Used in conjunction with Call Forwarding Variable. Permits a Customer who also subscribes to Call Forwarding Variable with the ability to activate, deactivate or change Call Forwarding from a remote location.

Call Forwarding Selective

This feature allows the Customer to have incoming calls from pre-selected telephone numbers forwarded to another number. The Customer may create or change a designated list and the maximum amount of pre-selected telephone numbers available for each Customer's list may vary depending on the switch type. The Customer assumes financial responsibility for all appropriate calling charges (including long distance charges, if any), generated by the use of this feature.

Call Waiting

This feature provides a tone signal that alerts the Customer talking on the line when a second call is incoming. A maximum of two calls may be in process at one time. A Customer who subscribes to Call Waiting can also inhibit the reception of the Call Waiting tone for the duration of a single call, preventing interruption of the call by activating a code to cancel Call Waiting. This functionality is automatically included with the Call Waiting feature at no additional cost to the Customer.

Custom Ring Service

This feature permits the Customer receive calls dialed to up to four separate telephone numbers associated with a single line. A distinctive ringing will be provided for each of the additional telephone numbers to facilitate identification of incoming calls. Customers can receive an optional custom ring service directory listing.

Call Return

This feature allows the Customer to automatically return the most recent incoming call, even if it is not answered. If the telephone number is busy, Call Return will attempt to call the number for a maximum of thirty (30) minutes after the feature is activated. Once the call is established, the Customer will hear a special ring when the call can be completed. This is accomplished by the Customer activating a code. NOTE: Some telephones are only capable of providing a standard ring. Customers must contact the manufacturer or distributor of their telephone set if they have any questions.

Call Trace

Customers receiving annoying or anonymous calls may request: a telephone number change, which will be provided at no charge by AT&T, or the capability to utilize Call Trace on a per activation basis, as needed. Call Trace allows the customer to dial a code (*57) to automatically request that the following information be recorded: the originating telephone number; the date and time of the call; the date and time Call Trace was activated. When Call Trace successfully identifies a calling number, a recording instructs the customer to call a toll free number, which will activate a Voice Response Script and assist the customer in establishing an open file. Should the customer decide to prosecute the call originating party, the customer should contact AT&T for further instructions. Activation of Call Trace never authorizes AT&T to provide the called party with the name or telephone number of the calling party. In the event that Call Trace is not available or is unable to resolve the case, it may be necessary to place a manual trap on the customer's telephone line.

Caller ID

Caller ID allows the Customer to identify most callers by letting him/her see the names and/or phone numbers on special display equipment. The customer must purchase the equipment separately and it is not available under this tariff.

Any Customer subscribing to Caller ID will be responsible for the provision of a display device which will be located on the Customer's premises. The installation, repair, and technical capability of that equipment to function in conjunction with the feature specified herein will be the responsibility of the Customer. AT&T assumes no liability and will be held harmless for any incompatibility of this equipment to perform satisfactorily with the network features described herein. Telephone CPN information transmitted via Caller ID is intended solely for the use of the Caller ID subscriber. Resale of this information is prohibited by this tariff. CPN will not be displayed if the called party is off-hook or if the called party answers during the first ring interval. CPN will be displayed for calls made from another central office only if it is linked by appropriate facilities. Caller ID is not available on operator handled calls.

Call Waiting ID

Call Waiting ID is available to Customers who subscribe to both Call Waiting and Caller ID, to identify the incoming callers name and telephone number. The feature allows for customers on a call to identify incoming callers through the Caller ID display unit.

Caller ID Blocking Per Line

Any AT&T calling party may prevent display of their telephone number or name to the called party by requesting Caller ID Blocking Per Line. Instead, the Caller ID subscriber will receive an anonymous, unavailable, or private indicator. This indicator notifies the Caller ID subscriber that the calling party chooses to block name and number delivery. Per line blocking for the blocking of CPN will be available upon request at no charge, only to the following entities for lines over which the official business of the agency is conducted, including those at the residences of employees/volunteers, where an executive officer of the agency registers a need for blocking and provides the required certification to AT&T: a) private, nonprofit, tax exempt, domestic violence intervention agencies; and b) federal, state, and local law enforcement agencies. The CPN will not be transmitted from a line equipped with this capability. Per line blocking is operational on a continuous basis but can be deactivated by the customer by dialing an access code immediately prior to placing a call.

Any AT&T calling party may prevent the display of their telephone number or name to the called party by dialing an access code (*67 on their touch-tone pad or 1367 from a rotary telephone) immediately prior to placing a call. The access code will activate per call blocking and is available at no charge.

If the calling party activates blocking, the CCPN will not be transmitted across the line to the called party. Instead, Calling Line Identification Customers will receive an anonymous indicator. This anonymous indicator notifies the Caller ID Customer that the calling party has elected to block the delivery of their name and telephone number. The blocking of CPN will not be provided on calls originating from Customer Owned Pay Telephones. If the Caller ID Customer also subscribes to Anonymous Call Rejection, the calling party will be routed to a telephone company recording advising the caller that the called party will not accept calls whose CPN has been blocked.

Anonymous Call Rejection (ACR)

Allows Customers to automatically reject all calls that have blocked the identification of their line (e.g.: marked anonymous, unavailable, or private). When ACR is active, the called party receives no alerting (ringing) for a call that has been rejected. The call is routed to a denial announcement and subsequently terminated.
