SECTION 3. DESCRIPTION OF SERVICES

3.1 xDSL Data Loop

Company offers xDSL services to provide high-speed data connections. XDSL services are non-switched, local exchange technologies that allow multiple forms of data and video to be carried over standard twisted pair copper wire facilities of the Company, or facilities of other carriers in the form of resold unbundled network elements, on the local loop between the central office and the customer's location. All terminal interfaces will be provided by industry-standard connectors as specified in or authorized by Subpart F of part 68, Title 47, Code of Federal Regulations. Services offered by the Company do not include access to or from the Public Switched Network. The Company provides data connections only and does not assign or otherwise route traffic by the use of telephone numbers (i.e., NPA-NXX-XXXX). In the event the Company begins to provide service to and/or from the Public Switched Network, the Company will file tariffs reflecting the rates, terms and condition for such services.
