SECTION 3 - DESCRIPTION OF SERVICE AND RATES, (CONT'D.)

3.3 Time of Day Rate Periods, (Cont'd.)

3.3.1 Day, Evening, and Night/Weekend times are determined by the local time of the location of the calling service point. Chargeable time for a rate period (e.g. 8AM-5PM) begins with the first stated hour (8AM) and continues to, but does not include, the second stated hour (5PM). The rate applicable at the start of chargeable time at the calling station applies to the call during the duration of the call that is applicable to that time period. If a call begins in one discount period and ends in another, the initial period discount applied is the discount in effect at the time the call is established. The charge for each additional minute of usage is the additional minute billing rate of the rate period in which the beginning of each minute occurs.

3.3.2 The time when connection is established is determined in accordance with the time - standard or daylight savings - legally or commonly in use at the location of the calling service point and determines whether Day, Evening, Night or Weekend rates apply. This rule applies whether the message is sent paid or collect and is applicable to interLATA direct dialed and operator assisted calls.

3.3.3 The Evening rate applies to the holidays listed below unless a lower rate period is in effect.

New Year's Day	**
Martin Luther King Day	*
President's Day	*
Memorial Day	*
Independence Day	**
Labor Day	*
Columbus Day	*
Veterans Day	**
Thanksgiving Day	*
Christmas Day	**

* = Applies to Federally recognized days only.

** = If the holiday falls on a Sunday, the holiday rates are applied to the following Monday. If the holiday falls on a Saturday, the holiday rates are applied to the preceding Friday.

SECTION 3 - DESCRIPTION OF SERVICE AND RATES, (CONT'D.)

3.4 Calculation of Distance

For services which are distance sensitive, usage charges are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

Step 1: Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.

Step 2: Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the "H" coordinates.

Step 3: Square the differences obtained in Step 2.

Step 4: Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5: Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6: Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:

$$\sqrt{\frac{(V1 - V2)^2 + (H1 - H2)^2}{10}}$$
