1. Page Numbering – Page Numbers appear in the upper-right corner of the page. Pages are numbered sequentially. New pages may occasionally be added to the tariff. When a new page is added, the page appears as a decimal. For example, a new page added between pages 34 and 35 would be 34.1.
2. Page Revision Numbers – Page Revision Numbers also appear in the upper-right corner of the page. These numbers are used to determine the most current page revision on file with the Public Service Commission of Missouri. For example, the Fourth Revised Page No. 34 cancels the Third Revised Page No. 34. Because of deferrals, notice periods, etc., the most current page number on file with the Commission is not always the tariff page in effect. Customers should consult with the Check Sheet for the page currently in effect.
3. Paragraph Numbering Sequence – There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level of coding.

- 2.6.2. An Application for service may be changed by the Customer upon written notice to Teligent, subject to acceptance and confirmation by Teligent, provided that a charge will apply to any change when Teligent receives the request after notification by Teligent of the acceptance and confirmation. - 2.8.2. When billing is based on customer usage, charges will be billed monthly for the usage in preceding billing periods. When service does not begin on the first day of the month, or end on the last day of the month, the charge for the fraction of the month in which service was furnished will be calculated on a pro rata basis. For this purpose, every month is considered to have 30 days. The Customer will be billed for all accrued usage beginning immediately upon access to the service. The rates charged to a Customer for usage charges will be the rates in effect on the first day of the Customer's billing cycle.
- 2.8.3. Bills are due and payable as specified on the bill, the due date will not be less than twenty-one (21) days after the date of the postmark on the bill. The Customer's first bill may be issued up to ninety (90) days after the date of installation.
- 2.8.4. Bills may be paid by mail or in person at the business office of Teligent or an agency authorized to receive such payment. All charges for service are payable only in United States funds. Payment may be made by cash, check, money order, cashier's check, or electronic funds transfer. Customer payments are considered prompt when received by Teligent or its agent by the due date on the bill. If the Customer remits to Teligent on more than one occasion during a twelve (12) month period a check, draft, or other instrument that is dishonored, Teligent may refuse acceptance of future checks and place the Customer on a "cash basis," pursuant to which Teligent has the right to refuse acceptance of anything as payment other than United States currency, United States Postal Service money orders, or cashier's check.
- 2.8.5. If Teligent does not receive any portion of the payment, or if Teligent receives any portion of the payment in funds that are not immediately available, by the due date, then a late payment penalty shall be due to Teligent. The late payment penalty shall be the portion of the payment not received by the date due, multiplied by the one and one half percent (1.5%) late charge. Unpaid amounts are subject to a late fee every subsequent due date to the extent the amount remains unpaid.
- 2.8.6. Teligent may assess up to twenty dollars (\$20.00), or five percent of the amount of the check, which ever is greater, for each check returned for insufficient funds.

- (a)(i) Call Forward Busy - Incoming calls are redirected to another phone when the called party's Business Line is busy. Calls are forwarded to a 1- to 32- digit phone number within or outside of the Customer's group. The forwarding phone number can either be predetermined or user programmable. The forwarding phone number can only be changed by contacting Teligent Customer Service and requesting a Service Order unless the Customer subscribes to the User Programmable Option.
- (a)(ii) Call Forward No Answer - Incoming calls are redirected to another phone when the called party's Business Line is not answered. If the Customer has selected both Call Forward Busy and Call Forward No Answer, the forwarding phone number does not have to be the same for each. Calls are forwarded to a predetermined 1- to 32- digit phone number within or outside of the Customer's group. The forward phone number can only be changed by contacting Teligent Customer Service and requesting a Service Order, unless the Customer subscribes to the User Programmable Option. - (a)(vi) Remote Access to Call Forward – Permits the Customer to activate, deactivate, or change the forward telephone number from a remote location. Remote Access to Call Forward is available on either a monthly or per call basis.
- (b) Three Way Call Transfer – allows a Customer to establish a call consisting of up to three participants without the use of an attendant of outside service. When the third party answers, a two-way conversation can be held before adding the original party for a three-way call. The initiator of the call controls the call and all parties will be dropped with the call initiator hangs up. The feature may be used to add a third party to either an outgoing or an incoming call. The activation of Three Way Call Transfer will disable Call Waiting.
- (c) Call Waiting – sends a tone signal while a call is in progress to indicate that a second call is waiting. By operation of the switchhook, the host call will be placed on hold so that the waiting call can be answered. Operation of the switchhook permits passage back and forth between the two calls, but a three-way conference cannot be established. The activation of Call Waiting will disable Three Way Call Transfer. Call Waiting takes precedence over Call Forward Busy. Call Waiting and Hunting are not compatible. Calls in call wait status that are ignored by the called party are not forwarded if the Business Line has the Call Forward No Answer feature. Call Waiting can be canceled either before making a particular call or while on a particular call.

Caller ID is one of the products that Teligent will offer. This feature enables the customer to view on a display unit the Calling Party Directory Name and/or Number (CPN) on incoming telephone calls.

When Caller ID is activated on a customer's line, the CPN of incoming calls are displayed on the called CPE during the first long silent interval of the ringing cycle.

Per line blocking for the blocking of CPN will be available upon request, at no charge, only to the following entities for lines over which the official business of the agency is conducted, including those at the residences of employees/volunteers, where an executive officer of the agency registers a need for blocking and provides the required certification to Teligent: A private, nonprofit, tax exempt, domestic violence intervention agencies, and federal, state, and local law enforcement agencies. The CPN will not be transmitted from a line equipped with this capability. Per line blocking is operational on a continuous basis but can be deactivated by the customer by dialing an access code immediately prior to placing a call.

A customer may prevent the delivery of their calling name and or number to the called party by dialing an access code prior to placing a call. The access code will activate per call blocking which is available at no charge. If the calling party activates blocking, the CPN will not be transmitted across the line to the called party. Instead, Calling Line Identification customers will receive an anonymous indicator. This anonymous indicator notifies the Caller ID customer that the calling party has elected to block the delivery of their name and telephone number. The blocking of CPN will not be provided on calls originating from customer-owned pay telephone service. If the Caller ID customer also subscribes to Anonymous Call Rejection, the calling party will be routed to a telephone company recording advising the caller that the called party will not accept calls whose CPN has been blocked.

Any customer subscribing to Caller ID will be responsible for the provision of a display device that will be located on the customer's premises. The installation, repair, and technical capability of that equipment to function in conjunction with the feature specified herein will be the responsibility of the customer. Teligent assumes no liability and will be held harmless for any incompatibility of this equipment to perform satisfactorily with the network features described herein.

Telephone CPN information transmitted via Caller ID is intended solely for the use of the Caller ID subscriber. Resale of this information is prohibited by this tariff. CPN will not be displayed if the called party is off-hook or if the called party answers during the first ring interval. CPN will be displayed for calls made from another central office only if it is linked by appropriate facilities. Caller ID is not available on operator handled calls.

- (e) Hunting – is a combination of two or more Business Lines connected to the central office so that incoming calls overflow to the next available Business Line if the dialed Business Line is busy. A hunt group can consist of up to sixteen (16) Business Lines, however, optimal service is obtained when between five (5) and fifteen (15) Business Lines are grouped together. Call Waiting cannot be a defined feature for a Business Line in a circular hunt group, however, Call Waiting can be configured for the last Business Line in a sequential hunt group. A hunt group of Business Lines can only be assigned one type of Hunting. There are two types of Hunting:
- (i) Circular – all Business Lines will be checked for an available line. Call Forward Busy cannot be a defined feature for a Business Line in a Circular serial hunt group.
- (ii) Sequential – only Business Lines with numbers in the hunt sequence following the dialed number will be checked for an available line.
- (f) Call Pick-Up – allows a Customer to pick up a ringing phone that is within a pre-defined Call Pick-Up group of phones by dialing a Feature Access Code. Call Pick-Up cannot pick up calls that are call waiting.
- (g) Distinctive Ringing – allows a Customer to have up to four (4) separate phone numbers, one primary and three secondary, assigned to a single Business Line. Each phone number will provide a distinctive ring on incoming calls to allow for identification of the incoming call. A distinctive call waiting tone for each telephone number will be provided, where facilities permit, to Customers also subscribing to Call Waiting. Distinctive Ringing is incompatible with Hunting.

- (h) Call Rejection - allows calls from up to eleven (11) pre-specified telephone numbers to be rejected or blocked. Callers from the pre-specified telephone numbers will receive an announcement that the called party is not accepting calls. For calls from a line within a multi-line-hunting group, the call will be blocked only when the main telephone number is included as one of the pre-specified telephone numbers.

(i) Call Trace

Customers, situated in an area also served by SWBT, receiving annoying or anonymous calls may request (1) a telephone number change, which will be provided at no charge by Teligent or (2) the capability to utilize Call Trace on a per activation basis, as needed. Call Trace allows the customer to dial an access code to automatically request that the following information be recorded:

- a. The originating telephone number
- b. The date and time of the call
- c. The date and time call trace was activated

When Call Trace successfully identifies a calling number, a recording instructs the customer to call a toll-free number, which will activate a Voice Response Script and assist the customer in establishing an open file. Should the customer decide to prosecute the call originating party, the customer should contact Teligent for further instructions. Activation of Call Trace never authorizes Teligent to provide the called party with the name or telephone number of the calling party. In the event that Call Trace is not available or unable to resolve the case it may be necessary to place a manual trap on the customer's telephone line.

- (j) Priority Ringing – differentiates incoming calls from up to eleven (11) preselected telephone numbers by signaling with a distinctive ringing pattern. If Call Waiting is also subscribed to, a distinctive tone is heard for the selected set of numbers. The distinctive ring/tone that identifies the numbers on the Priority Ringer List is the same for all the numbers on the list.
- (k) Anonymous Call Rejection – allows a Customer, with or without Caller ID, to reject calls for which calling name/number display information has been intentionally blocked. If this feature is assigned to the main number of the hunt group, then the rejected incoming call will continue to hunt rather than be completely rejected.
- (l) Speed Call – an arrangement which provides for the calling of a telecommunications network telephone number by dialing an abbreviated code. Two arrangements are available:
 - (i) Speed Call 8 – Consists of a maximum of eight (8) stored numbers that can be dialed by entering an * and 1-digit code, which can be from 2 to 9.
 - (ii) Speed Call 30 – Consists of a maximum of thirty (30) stored numbers that can be dialed by entering an * and 2-digit code, which can be from 20 to 49. The Speed Call 30 codes cannot conflict with any other Feature Access Codes.
