TARIFF FORMAT

JAN 23 1995

A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.

B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the PSCM. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc. the PSCM follows in its tariff approval process, the most current sheet number on file with the Commission is not always the tariff page in effect.

C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1.
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).

The Customer is responsible for all costs at his or her premises, including personnel, wiring, electrical power, and the like, incurred in the use of the Company's service. When such terminal equipment is used, the equipment shall comply with the generally accepted minimum protective criteria standards of the telecommunications industry as endorsed by the Federal Communications Commission.

In instances where the Company's service is connected to the Subscriber's customer-provided communications system or equipment, or to any service or equipment provided by others, the Subscriber must ensure that the equipment or system provides to the Company immediate answer supervision upon the delivery of the call to the Customer's switching equipment or to the Customer's equipment connected to the communications system so that the measure of chargeable time begins upon the delivery of the call to the switching equipment or to the equipment connected to the communications system and ends upon termination of the call by the calling party. When service is connected to a communications system at a Customer's premises, answer supervision must be provided when the call terminates in or passes through the first Customer premises equipment on that communications system.

In the absence of timely and accurate answer supervision as described above, the Company reserves the right to suspend or terminate service and to recompute the Subscriber's billing based on estimates derived from a surrogate for answer supervision developed by the Company appropriate to the Customer's circumstances.

3.3 Calculation of Distance

MISSOURI
Public Service Commission

Usage charges for all mileage sensitive products are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

- Step 1 - Obtain the "V" and "H" coordinates for the serving wire center of the Subscriber's switch and the destination point.
- Step 2 - Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the "H" coordinates.
- Step 3 - Square the differences obtained in Step 2.
- Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5 - Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

SECTION 3 - SERVICE AND RATE DESCRIPTION, (CONT'D)

**3.8 Switched Message Service Terminated in Dedicated Access Lines¹
(cont'd.)**

3.8.3 Dimension Dedicated

MISSOURI
Public Service Commission

Dimension Dedicated is a customized telecommunications product requiring the Subscriber to originate or terminate calls via dedicated facilities between the Subscriber's premises and the Carrier's terminal location. Dimension Dedicated provides a unified service incorporating dedicated dial-up, switched dial-up, dedicated 800, switched 800 and OMNI Card origination. Subscribers to Dimension Dedicated and Dimension receive volume discounts based on their combined intrastate, interstate, and international usage.

.1 Dedicated Facilities

Dedicated facilities must be obtained to connect the Subscriber to the Carrier's terminal location. The Subscriber may elect to have the Carrier arrange for the installation of the required Dedicated Facilities via an underlying carrier, or may themselves arrange to have such facilities installed and billed directly by an underlying carrier.

If the Carrier has arranged for the installation of the Dedicated Facilities, the underlying carrier's nonrecurring and recurring charges will be passed through to the Subscriber by the Carrier.
