	<u>CHANGES</u>
VI.	OTHER TARIFF CHANGES

1	DIRECT TESTIMONY			
2	OF			
3	WILBON L. COOPER			
4	CASE NO. ER-2010			
5	I. <u>INTRODUCTION</u>			
6	Q. Please state your name and business address.			
7	A. My name is Wilbon L. Cooper. My business address is One Ameren			
8	Plaza, 1901 Chouteau Avenue, St. Louis, Missouri 63103.			
9	Q. By whom are you employed and in what capacity?			
10	A. I am employed by Union Electric Company d/b/a AmerenUE			
11	("AmerenUE" or the "Company") as the Manager of the Rates and Tariff Department.			
12	Q. Please describe your educational background and employment			
13	experience.			
14	A. I have a Bachelor of Science degree in Electrical Engineering from the			
15	University of Missouri-Rolla.			
16	I was employed as an Assistant Engineer in the Rate Engineering			
17	Department of Union Electric in June 1980. My work included assignments relating to			
18	the general analyses and administration of various aspects of Union Electric's electric,			
19	gas, and steam rates. In October 1989, I was appointed Supervising Engineer - Rate			
20	Analysis, in the Rate Engineering Department of Corporate Planning at Ameren Services			
21	Company. In this position, I was responsible for meeting the analytical requirements for			
22	the Company's retail gas and electric rates and wholesale electric rates, including load			

1 research and various cost of service and rate design studies, as assigned. I was appointed 2 to my present position of Manager of Rates and Tariffs in March 2003. 3 I currently have responsibility for the general policies and practices 4 associated with the day-to-day administration and design of AmerenUE's electric and gas 5 rate tariffs, riders and rules and regulations tariffs on file with the Missouri Public 6 Service Commission ("Commission") and in the participation in various proceedings 7 before this regulatory agency. In addition, Rates and Tariffs is responsible for 8 conducting class cost of service and rate design studies and the participation in other 9 projects of a general corporate nature, as requested by Stephen M. Kidwell, Vice 10 President Regulatory Affairs and Energy Efficiency. 11 I have previously submitted testimony before the regulatory commissions 12 of Missouri, Illinois, and Iowa. 13 II. PURPOSE AND SUMMARY OF TESTIMONY 14 **Q**. What is the purpose of your direct testimony in this proceeding? 15 A. My direct testimony discusses: a) the revenue increase being proposed for 16 the Company's electric retail rate classes; b) the development and results of a class cost 17 of service study being submitted in connection with the direct testimony of AmerenUE 18 witness William M. Warwick as part of this case; c) the design and development of the 19 individual class rates; d) a tariff revision to the 12(M) (Large Transmission Service, or 20 "LTS") service classification (under which Noranda Aluminum, Inc. takes service) filed 21 as part of this case; and e) a miscellaneous tariff revision to the Company's Rules and

22 Regulations - Billing Practices.

Q. Have you prepared or have there been prepared under your direction
 and supervision a series of schedules for presentation to the Commission in this
 proceeding?

A. Yes. I have prepared nine schedules. The first four, discussed
immediately below, provide a summary of the rate increase requested in this case. I
discuss the remaining schedules throughout my direct testimony.

7

Q. Please identify Schedules WLC-E1 and WLC-E2.

8 Schedule WLC-E1 consists of nineteen (19) tariff sheets, which reflect the A. 9 non-LTS revised rates and miscellaneous tariff revisions, and Schedule WLC-E2 consists 10 of seven (7) tariff sheets which reflect the revised Service Classification 12(M) or LTS 11 tariff being proposed by the Company for approval by the Commission in this 12 proceeding. These tariffs, taken as a whole, would provide an increase in the Company's 13 net Missouri jurisdictional normalized test year revenue of approximately \$402.5 million, or approximately 18%, over the annualized test year¹ revenue that would be realized 14 15 from the tariffs which are effective at the time of filing.

16

Q.

Please identify Schedule WLC-E3.

A. Schedule WLC-E3 shows the distribution of the proposed net revenue increase to the Company's various proposed rate service classifications, resulting from the rates contained in the proposed tariffs in Schedules WLC-E1 and WLC-E2, excluding gross receipts taxes levied on customer billings by the various municipalities within the Company's service area.

¹ The test year in this case is the 12 months ending March 31, 2009, with certain pro forma adjustments discussed in the direct testimony of AmerenUE witness Gary S. Weiss, including as adjusted for customer growth through February 28, 2010.

1 Q. Please identify Schedule WLC-E4. 2 Schedule WLC-E4 illustrates the effects of the proposed rates in the tariffs A. 3 in Schedules WLC-E1 and WLC-E2 upon typical monthly bills of customers served 4 under the Company's rate service classifications. 5 III. CLASS COST OF SERVICE STUDY 6 Α. **Class Cost of Service Concepts and Operating System Components** 7 Q. Please explain what is meant by "class cost of service." 8 A. The Company currently provides service to its customers in a number of 9 rate classifications that are designated for residential or non-residential service. The non-10 residential customer group is differentiated by customer size and the voltage level at 11 which the Company provides service. The current customer classes are Residential, 12 Small General Service ("SGS") and Large General Service ("LGS") (all of which have 13 their service delivered at a low secondary voltage level); Small Primary Service ("SPS") 14 and Large Primary Service ("LPS") (delivery at a high voltage level); Large 15 Transmission Service ("LTS") (delivery at a "transmission" voltage level) and Lighting 16 Service (both area and street lighting). A class cost of service study provides a basis for 17 allocating and/or assigning the Company's total jurisdictional cost of providing electric 18 service to these various customer classes in a manner that reflects cost causation. The 19 results of a class cost of service study with equalized rates of return are often referred to 20 as "class revenue requirements." Mr. Warwick conducted a class cost of service study 21 for this case, under my supervision, and he is sponsoring that study in direct testimony 22 filed in this proceeding.

1Q.How are the results of a class cost of service study used by the2Company?

A. These study results are typically used to develop the target level of annual revenue that the Company should recover from each customer class, through the application of the rates or charges within the Company tariffs under which the various customer classes are being served.

7

Q. Please explain your use of the term "rate design."

The term "rate design" refers both to the process of establishing the 8 A. 9 specific charges (e.g. monthly customer charges, dollars per kilowatt of demand and/or 10 cents per kilowatt-hour energy charges) for each customer class, as well as to the actual 11 structure of an individual class rate. The rate design, or structure, of a given class rate 12 may range in complexity from a simple structure consisting of a monthly customer 13 charge and a flat charge per kilowatt-hour (such as the Company's summer Residential 14 rate), to a more complex set of customer, demand, energy and reactive charges (such as 15 the Company's SPS, LPS and LTS rates). In all instances, however, the charges within a 16 specific rate classification are established such that the application of these individual 17 charges to the total annual customer class electrical usage will result in the collection of 18 the targeted annual revenue requirement of each of the Company's retail rate classes.

Q. As background for additional discussion on the class cost of service
study the Company is sponsoring in this case, please provide a general description
of the various facilities utilized by the Company in producing and delivering
electricity to its customers.

A. Schedule WLC-E5 of my testimony is a simplified diagram illustrative of the AmerenUE electric system, showing how power flows from the generating station and is then transmitted and distributed to the home of a residential customer. Other customers receiving service at higher voltage levels are also served from various points on the same system.

6

Q. Please describe, in more detail, how the Company's system operates.

A. As illustrated in Schedule WLC-E5, electrical power is produced at the Company's generating stations at voltage levels ranging from 11,000 to 23,750 volts. To achieve transmission operating economies, this voltage is raised, or stepped up, by power transformers at the generating station sites to voltages generally ranging from 138,000 to 345,000 volts for transmission to the Company's bulk substations that are strategically located throughout its service area.

13

Q. What is the function of the Company's bulk substations?

A. Bulk substations receive electrical power at transmission voltage levels. They then lower, or step-down, this power to transmission or distribution voltages generally ranging from 138,000 volts to 34,500 or 69,000 volts. Such power is then distributed over the Company's 34,500 or 69,000 volt distribution lines to distribution substations located throughout the Company's service area.

19

Q. What function do distribution substations perform?

A. Distribution substations, which are far more numerous than bulk substations, provide a further reduction in the electrical power voltage to a range of 4,160 to 13,800 volts within various portions of the Company's service area. The power is then

1 distributed over the Company's 4,160 to 13,800 volt distribution lines to points at or near

- 2 the premises of the Company's customers.
- Q. After electrical power at 4,160 to 13,800 volts is delivered to a point at
 or near a customer's premises, do any further reductions in voltage take place?

A. Yes, in most instances. While approximately 650 of the Company's largest industrial and commercial customers in Missouri take service at the 4,160 to 13,800 volt range or higher, the majority of the Company's customers are served at lower voltages, ranging from 120 to 480 volts. The lower voltages are achieved through the use of numerous line transformers located at or near the customer's premises. This low voltage electrical power from the line transformer is delivered to a customer's premises over low voltage lines referred to as "secondary" and "service" lines.

Q. What voltages are utilized in providing electric service to residential customers?

A. Residential customers are served at either 120 or 240 volts depending
upon the customer's service entrance panel size and connected appliances.

16

Q. What voltages are utilized to serve non-residential customers?

A. Non-residential customers on the Company's SGS or LGS rates are served at voltages from 120 to 480 volts due to the wide variety of electrical consuming devices utilized by such customers. Customers in the latter voltage range are often referred to as "secondary" voltage customers. Other larger non-residential customers receiving service at 4,160 to 13,800 volts are referred to as "primary" voltage customers. The Company also serves approximately 50 customers in Missouri at voltages above the 13,800 volt level. These are referred to as "high voltage" or Rider B customers. Additionally, the

- Company serves its only current LTS customer at 161 kilovolts ("kV") via a unique
 transmission service arrangement.
- Q. In your description of the AmerenUE generation, transmission and
 distribution system are you using the term "lines" in a general sense?

5 A. Yes. Those "lines" may be overhead conductors or underground cables. 6 Overhead "lines" include all poles, towers, insulators, crossarms and all other hardware 7 associated with such installations. Underground "lines" include direct buried cable, as 8 well as that installed in single or multi-duct conduit, and other associated hardware.

9

B. Costs and Revenues in Class Cost of Service Study

Q. Please describe the components of costs and revenues that are
contained in the class cost of service study that the Company is filing in this case.

12 A. A traditional cost of service study incorporates the aggregate jurisdictional 13 (Missouri or Federal Energy Regulatory Commission ("FERC")) accounting and 14 financial data normally submitted to a regulatory commission by a utility in support of a 15 request for an adjustment in its overall rate levels. Such a study is required to determine 16 the level of revenues necessary for the Company to recover its operating and maintenance 17 expenses, depreciation applicable to its investment in utility plant, property taxes, income 18 and other taxes, and provide a fair rate of return to the Company's investors, through its 19 rates. The Company's class cost of service study allocates, or distributes, these total 20 jurisdictional costs to the various customer classes in a cost based manner that fairly and 21 equitably reflects the cost of the service being provided to each customer class.

1	Q. Was a Missouri jurisdictional cost of service study performed by the			
2	Company's Regulatory Accounting group the starting point for the class cost of			
3	service study performed and sponsored by Mr. Warwick?			
4	A. Yes, it was. As I indicated above, the Company's class cost of service			
5	study is a continuation and refinement of the Missouri jurisdictional cost of service study			
6	discussed in the direct testimony of Mr. Weiss, resulting in a determination of the costs			
7	incurred in providing electric service to each of the Company's customer classes.			
8	Q. What categories of cost were examined in the development of the class			
9	cost of service study being sponsored by Mr. Warwick in this case?			
10	A. A detailed analysis was made of all elements of the Company's Missouri			
11	jurisdictional rate base investment and expenses during the test year for the purpose of			
12	allocating such items to the Company's present customer classes. This analysis consisted			
13	of classifying the various elements of cost into their customer-related, energy-related and			
14	demand-related cost categories.			
15	Q. Why are the Company's costs classified into these three categories?			
16	A. It is generally accepted within the industry that each of these categories is			
17	a cost incurred by the Company as a result of different cost causation factors and, hence,			
18	should be allocated among the various customer classes by different methodologies			
19	which consider such cost causation.			
20	Q. What are customer-related costs?			
21	A. Customer-related costs are the minimum costs necessary to just make			
22	electric service available to the customer, regardless of the extent to which such service is			
23	utilized. Examples of such costs include monthly meter reading, billing, postage,			

Q.

1 customer accounting and customer service expenses, as well as a portion of the costs 2 associated with the required investment in a meter, the service line, the transformer and 3 other distribution system facilities. The customer components of the distribution system are those costs necessary to simply make service available to a customer, without the 4 5 consideration of the amount of the customer's electrical use. The January 1992 edition of 6 the Electric Utility Cost Allocation Manual, published by the National Association of 7 Regulatory Utility Commissioners ("NARUC"), references both customer-related and 8 demand-related cost components for all distribution plant and operating expense accounts 9 other than for substations and street lighting.

10

What are energy-related costs?

11 A. Energy-related costs are those costs related directly to the customer's 12 consumption of electrical energy (kilowatt-hours) and consist primarily of fuel, fuel 13 handling, and a portion of production plant maintenance expenses.

14

15

Q. What are demand-related costs, which are the third category of costs to which you referred?

A. Demand-related costs are rate base investment and related operating expenses associated with the facilities necessary to supply a customer's service requirements during periods of maximum, or peak, levels of power consumption each month. During such peak periods, this usage is expressed in terms of the customer's maximum power consumption, commonly referred to as kilowatts of demand. As so defined, demand-related costs include those costs in excess of the aforementioned customer and energy-related costs. The major portion of demand-related costs consists of

generation and transmission plant and the non-customer-related portion of distribution
 plant.

3

B. <u>Cost Allocations</u>

4 Q. After the Company's costs are categorized into one of these three
5 classifications, how are they allocated to the various rate classes?

A. Customer-related costs are normally allocated on the basis of the number of customers associated with each rate class. In some instances involving non-residential customer multiple metering installations, weighting factors may also be used. In addition, where specific costs can be identified as being attributable to one or more specific customer classes, such as credit and collection expenses, a direct assignment of such costs will be made.

Energy-related costs are allocated to the customer classes on the basis of their respective energy (kilowatt-hour) requirements at the generation level of the Company's system, which includes applicable system energy losses. The use of this common point on the Company's system to allocate such costs ensures that each customer class will be assigned the appropriate portion of the Company's total incurred variable fuel and purchased power costs.

Demand-related distribution costs are allocated to customer classes using one or more allocation factors based upon customer class coincident, class non-coincident or individual customer non-coincident kilowatt demands. Demand-related transmission costs are allocated to customer classes on a 12 coincident peak ("CP") basis, as that methodology is consistent with the method utilized to assign cost responsibility of the demands of the Ameren operating companies and all of the other utilities participating in

the Midwest Independent Transmission System Operator, Inc. ("MISO"), per the MISO's Attachment O Rate Formulae in the Open Access Transmission, Energy and Operating Reserve Markets Tariff on file at the Federal Energy Regulatory Commission ("FERC"). Demand-related production costs are allocated on the basis of the Average & Excess ("A&E") Demand Method referenced in the NARUC cost allocation manual. As not all customers have demand meters, customer class and individual customer kilowatt demand data is obtained from the Company's ongoing load research program.

8 Q. As generation (production) plant consists of more than half of the 9 Company's total plant investment, please summarize the most common cost 10 allocation methodologies employed within the electric utility industry for the 11 allocation of generation plant.

A. The most common and generally accepted methodologies used for the
allocation of generation plant can be grouped into the following three categories:

14 <u>Peak Responsibility</u> – Costs are allocated on the basis of the relative customer 15 class demands at the time of occurrence of the company's system peak during the 16 period of study (referred to as the "coincident peak" or "CP" method). One or 17 more system peak hours, or a number of monthly or seasonal system peaks, are 18 normally used in applying the CP methodology.

<u>Non-Coincident Peak</u> – Costs are allocated on the basis of the maximum peak
 demand of each customer class at any time during the study period, without
 regard to the time of occurrence or magnitude of the company's coincident system
 peaks (referred to as the "NCP" method). As with the CP method, the NCP
 methodology can employ one or more customer class peaks in its application.

1	Average and Excess - Costs are allocated based upon a weighting of average class		
2	demand throughout the year (kilowatt-hours \div 8,760 hours) and class "excess"		
3	demand(s). The excess demand(s) used in this determination are the class NCP		
4	demand(s) in excess of the average class demand during the study period. As		
5	with the CP and NCP methodologies, this method can also employ the use of one		
6	or more customer class NCP demands to determine class excess demands.		
7	Average class demands are weighted by the Company's annual system load factor		
8	("LF") (LF = average demand \div peak demand) and excess class demands are		
9	weighted by the complement of the load factor $(1.0 - LF)$ in the development of		
10	cost allocation factors using this methodology.		
11	Q. Which cost allocation methodology is the Company using for		
12	production plant in its class cost of service study in this case?		
13	A. The Company is utilizing the 4 NCP version of the Average and Excess		
14	demand methodology for allocating production plant in this case.		
15	Q. What were the considerations associated with the Company's election		

15 Q. What were the considerations associated with the Company's election 16 to utilize the A&E demand allocation methodology for production plant in this 17 case?

A. Two major factors associated with generation capacity planning prompted the use of the A&E demand cost allocation methodology. Generally, system peak demands and, to a somewhat lesser extent, excess customer demands, are the motivating factors which influence the <u>amount</u> of capacity the Company must add to its generation system to provide for its customers' maximum demands. However, the <u>type</u> of capacity (base, intermediate or peaking) which the Company must add is not dictated by

1 maximum customer demand alone, but also by the annual energy, or kilowatt-hours, 2 which will be required to be generated by such capacity, i.e., the generation unit's 3 utilization factor. A cost allocation methodology that gives weight to both a) class peak 4 demands and b) class energy consumption (average demands) is required to properly 5 address both of the above considerations associated with capacity planning. The A&E 6 methodology gives weight to both of these considerations by its inclusion of both average 7 class demands, which are kilowatt-hours divided by total hours in the year (8,760) and 8 the excess NCP demands of each class. As indicated earlier, the Company's A&E cost 9 allocation study used both the 4 NCP and average class demands in the determination of 10 class excess demands.

Q. Is there also quantitative support for the Company's selection of the 4 NCP version of the A&E demand allocation methodology for production plant?

A. Yes. The 4 NCP version of the A&E methodology, which uses the four maximum non-coincident monthly peak demands for each customer class during the test year, was selected due to the fact that 15 of the 20 maximum 4 NCP monthly demands for the Company's major customer classes occurred during the Company's summer peak demand months of June-September. The use of the 4 NCP demand option, rather than a lesser number of monthly NCP demands, also prevents the demand allocator for any customer class from being unduly influenced by any extreme demand in a given month.

20 Q. After the determination of customer, energy and demand allocation 21 factors for the various components of the Company's costs, what was the next step 22 in the completion of the Company's class cost of service study?

1 A. The next step was to apply the allocation factors developed for each class 2 to each component of rate base investment and each of the elements of expense specified 3 in the jurisdictional cost of service study. The aggregation of such cost allocations 4 indicates the total annual costs, or annual revenue requirement, at equalized rates of 5 return associated with serving a particular customer class. The operating revenues of 6 each customer class minus its total operating expenses provide the resulting net operating 7 income for each class. This net operating income divided by the rate base allocated to 8 each class will indicate the percentage rate of return being earned by the Company from a 9 particular customer class. This application of allocation factors to Missouri jurisdictional 10 costs, the aggregation of the total annual cost to each of the customer classes and a 11 summary of the results of the Company's class cost of service study are described in 12 detail in Mr. Warwick's direct testimony.

13

C. <u>Study Results</u>

Q. Referring now to the results of the Company's class cost of service
 study performed by Mr. Warwick in this case, please identify Schedule WLC-E6.

A. Schedule WLC-E6 (which is the same as Mr. Warwick's Schedule WMW-E1) summarizes the results of the Company's class cost of service study, indicating the rate of return on rate base currently being earned on the service being provided to the Company's major retail customer classes. As indicated earlier, the basic starting point for this study was the Missouri jurisdictional cost of service study.

Q. What general conclusions can be drawn from the information contained in Schedule WLC-E6?

D.

1 A. The Residential, Large Primary and Large Transmission Service classes 2 are providing a below average rate of return, while all other classes are providing above 3 average rates of return. Overall, as is suggested by the filing of this case, the Company is 4 earning an inadequate return on its rate base.

5

Class Revenue Proposals

6

Q. Please identify Schedule WLC-E7.

A. Schedule WLC-E7 summarizes the class revenue requirements necessary to give the Company an opportunity, based upon test year figures with the pro forma adjustments made by Mr. Weiss, to achieve an equal rate of return from its customer classes. This information was developed from the cost of service data contained in Schedules WMW-E1 and WMW-E2 of Mr. Warwick's direct testimony, and is based upon the Company's proposed level of Missouri retail revenues.

Q. Why are the equal rates of return for all customer classes, embedded
in this study, an appropriate starting point when designing electric utility rates?

A. There are several reasons why equal class rates of return are an appropriate starting point in the consideration of rate design. First and foremost is the consideration of equity and fairness to all electric customers. Purely from a cost perspective and ignoring all other factors, to overcharge one customer class in order to subsidize another class is not supportable.

A second important consideration in support of equal class rates of return is the goal of encouraging cost effective utilization of electricity by customers. To make appropriate decisions regarding the most efficient and effective use of electricity, as well

as the acquisition of electrical consuming equipment, customers require correct and
 appropriate price signals from the Company's electric rates.

A third consideration is that of competition. Cost-based electric rates permit the Company to compete effectively with alternative fuels, co-generation and other electric utilities for new commercial and industrial customers.

6 Q. Once the annual "cost-based" revenue requirements are developed by 7 this process for all of our customer classes, would the design of specific rates for 8 each class be the next and final step in the overall rate development process?

9 A. If one was to base class rates solely on class cost of service and ignore 10 other relevant factors, the response is yes. However, the results of Mr. Warwick's study 11 produced the following revenue increase by customer class:

Customer Class	Cost of Service Increase
Residential Service	29%
Small General Service	11%
Large General and Small	6%
Primary Service	
Large Primary Service	17%
Large Transmission Service	14%

- Q. Is the Company proposing that these cost based class revenue
 requirements be utilized in developing class rates in the case?
- 2

1 A. No, the Company is proposing a departure from class revenue 2 requirements or rate design being established solely on the basis of equal class rates of 3 return as shown in its class cost of service study.

4

5

Q. Why is the Company proposing to vary from the cost based revenue requirements?

6 A. The Company recognizes that factors other than cost of service are 7 relevant to determining class revenue requirements. These factors may include, but are 8 not limited to, revenue stability, rate stability, effectiveness in yielding total revenue 9 requirements, public acceptance, and value of service.

10

11

Q. What is the Company's proposal for allocating the revenue increase requested in this case?

12 A. The Company is proposing to allocate the revenue increase requested in 13 this case on an equal percentage of present revenue basis that is somewhat consistent with 14 the Commission approved non-unanimous Stipulation and Agreement Concerning Class 15 Cost of Service and Certain Rate Design Issues ("Stipulation and Agreement") in the 16 Company's most recently completed rate case (Case No. ER-2008-0318). This 17 Stipulation and Agreement was signed by representatives from the Office of Public Counsel, Missouri Energy Group, Missouri Industrial Energy Consumers, Noranda 18 19 Aluminum, and The Commercial Group and contained a formulaic method (Attachment 1 20 to Stipulation and Agreement), attached hereto as Schedule WLC-E8, to allocate the 21 revenue increase to the Company's customer classes in that case. The Staff of the 22 Missouri Public Service Commission was the only party to oppose the Stipulation and 23 Agreement. It should be noted that the Stipulation and Agreement included language that

any increase above \$150 million would be spread as equal percentage of present revenues
 from each rate class, while the Company in this case is simply proposing to spread all of
 the increase sought to all rate classes on an equal percentage basis.

4 While the above-referenced Stipulation and Agreement is not binding in 5 this proceeding, the Company believes that it is reasonable to propose that the revenue 6 increase in this case be allocated consistently with the Stipulation and Agreement's 7 treatment of an increase in the last case above \$150 million. Support for such 8 reasonableness lies in: 1) class cost of service based revenue requirements in this case 9 being fairly consistent with those in Case No. ER-2008-0318; 2) the short amount of time 10 since the Stipulation and Agreement; and 3) the Commission's approval of the 11 Stipulation and Agreement.

Q. Please explain the Company's proposal to allocate the revenue increase in this case fairly consistently with the Stipulation and Agreement in Case No. ER-2008-0318.

A. The Stipulation and Agreement contained four steps for allocating the revenue change depending on the level of change (i.e., overall increase up to \$80 million, overall increase equal to or above \$80 million up to \$150 million (2 steps), and overall increase greater than \$150 million). As noted in the Commission order, this Stipulation and Agreement only resulted in a slight redistribution of revenue among the classes.

20 Q. Did the Commission's order in Case No. ER-2008-0318 contain any 21 language to support establishing class revenue requirements based on factors other 22 than class cost of service results?

A. Yes. At page 121 the order states, "The completion of a class cost of service study does not end the rate design process. The Commission is not required to precisely set rates to match the indicated class cost of service. Instead, the Commission has a great deal of discretion to set just and reasonable rates, and can take into account other factors, such as public acceptance, rate stability and revenue stability in setting rates."

7

Q. Please identify Schedule WLC-E9.

8 A. Schedule WLC-E9 summarizes the proposed class revenue requirements 9 necessary to give the Company an opportunity, based upon test year figures, to achieve 10 its jurisdictional rate of return.

- 11 Q. What was the source of the billing unit data used in the design of the
- 12 **Company's proposed rates?**

A. AmerenUE witness James R. Pozzo is providing direct testimony discussing the billing unit data used in the design of the proposed rates. The data contained in Schedules JRP-E1 through JRP-E6 of Mr. Pozzo's direct testimony in this case was used as a resource for the individual class billing units. They are based upon the Company's weather normalized sales, as adjusted to reflect expectations of LTS billing data, during the test year in this case as discussed in the direct testimony of AmerenUE witness Steven M. Wills.

20

IV. <u>CLASS RATES</u>

Q. Please describe the Company's specific rate design proposal in this
case.

A. The Company's rate design proposal in this case is as follows:

(1) Residential Rate Design. The Customer Charge was the initial rate
 component developed. Mr. Warwick's class cost of service study produced a
 customer charge of approximately \$20 per month. Although the customer charge
 has not been revised from its current level of \$7.25 per month since March 2000,
 the Company has limited this charge to \$10.00 in its proposed Residential Rate.
 The remaining energy charges of the Residential Rate were increased to achieve
 the annual revenue target or across the board increase for this class.

8 (2)Small General Service Rate Design. The Customer Charge was 9 the initial rate component developed. Mr. Warwick's class cost of service study 10 produced a weighted customer charge of \$21.05 for customers in this class. The 11 current level is \$8.03 per month for single phase service and \$16.71 for three 12 phase service. The Company has limited this charge to \$11 for single phase 13 service and \$22 for three phase service in its proposed Small General Service 14 Rate. The remaining energy charges of the Small General Service Rate were 15 increased to achieve the annual revenue target or across the board increase for this 16 class.

17 (3) Restoration of Certain Prior Uniform Features of the Company's non –
18 Residential, Commercial and Industrial Customer classes. The following rate
19 design features are being proposed to restore or maintain certain uniform features
20 of the Company's rate design that were in effect prior to Case No. ER-2008-0318.
21 Remaining rate designs for these Service Classifications will be discussed later.

(a) The customer charges on the SPS, LPS, and LTS rate schedules are
proposed to be the same.

1	(b) The rates (\$ per kW) for Rider B voltage credits are proposed to be			
2	the same under all applicable rate schedules.			
3	(c) The rate (\$ per billed kVar) associated with the Reactive Charge is			
4	proposed to be the same under all applicable rate schedules.			
5	(d) The rate (\$ per month) associated with the Time-of-Day meter			
6	charge is proposed to be the same under all applicable rate schedules.			
7	(4) Large General Service and Small Primary Service Rate Design.			
8	The demand and energy charges on the LGS and SPS rate schedules were			
9	increased uniformly to achieve the annual revenue requirement of these classes			
10	after uniformity adjustments, as prescribed in (3) above were made.			
11	(5) Large Primary Service Rate Design. The demand and energy			
12	charges on the LPS rate schedule were increased uniformly to achieve the annual			
13	revenue requirement of this class after uniformity adjustments, as prescribed in			
14	(3) above were made.			
15	(6) Large Transmission Service Rate Design. The demand and energy			
16	charges on the LTS rate schedule were increased uniformly to achieve the annual			
17	revenue requirement of this class after uniformity adjustments, as prescribed in			
18	(3) above were made. Additionally, certain changes are being proposed to the			
19	tariff of this Service Classification to address the uncertainty or volatility of			
20	billing parameters, as addressed later in my direct testimony.			
21	Q. Proposed monthly customer charges for both the Residential and			
22	Small General Service Classifications reflect percentage increases materially beyond			

the across the board percentage increase level proposed for these classes. Please explain.

3 A. First, it should be noted that the combination of proposed customer and 4 energy charges for each of these respective classes produces the overall percentage 5 increase being requested in this case (i.e. 17.95%) for each. Second, as discussed in the 6 testimony of Company witness Stephen M. Kidwell, AmerenUE has embarked on an 7 aggressive energy efficiency and demand response effort to give customers more control 8 over their energy usage and to lower their bills via reduced consumption. Therefore, the 9 Company is proposing material increases in customer charges and corresponding 10 reductions in the percentage of revenue derived from volumetric or consumption charges 11 for these classes. This proposal reflects cost causation principles (i.e. moves customer 12 charges closer to class cost of service study results), helps to mitigate the negative 13 financial impact on the Company associated with decreased volumetric or energy use, 14 and, at the same time, does not discourage energy efficiency. Shifting more of the class' 15 revenue requirement to monthly customer charges helps to remove some of the financial 16 disincentive for utilities to embark on an energy efficiency campaign and, also, affords 17 the utility a more reasonable opportunity to earn its authorized rate of return. 18 Approximately 91% and 94%, respectively, of the present test year revenues of these 19 classes are collected via current energy or volumetric charges with the remaining 9% and 20 6% respectively being collected via customer charges. The proposed customer charges 21 would increase the customer charge contribution to total revenues for the Residential and 22 Small General Service classes to 11% and 8%, respectively.

1 2 3

SERVICE CLASSIFICTION 12(M) V. TS (NORANDA)) TARIFF CHANGES

O. 4 Earlier you mentioned certain proposed Rate Schedule LTS tariff 5 (Attached as Schedule WLC-E2) changes to address uncertainty or volatility of the 6 load of this customer class. Please explain.

7 As detailed in the direct testimony of AmerenUE witness Ronald C. A. 8 Zdellar, on Wednesday January 28, 2009, an extraordinary and devastating ice storm 9 occurred in Southeast Missouri and caused severe damage to the transmission lines 10 through which the only customer served under this tariff—Noranda Aluminum, Inc. ("Noranda")—receives service.² Consequently, an unprecedented and significant loss of 11 12 the Company's retail load and the revenues associated therewith has occurred for a period 13 of time that cannot at this time be determined. It should also be noted that Noranda's 14 revenues constitute approximately six percent of the Company's total base rate revenues, 15 and that no other single customer even approaches having such a material impact on the 16 Company's revenue requirement.

How is the Company proposing to address this issue and the 17 0. 18 possibility that Noranda's load could be significantly reduced or lost in the future?

19 A. We are proposing changes to the Rate Schedule LTS tariff that are 20 designed to provide the Company with retail revenues from Noranda equal to those 21 assumed in the revenue requirement in this case, no more and no less.

22

Q. What level of revenues from Noranda is being included in the revenue 23 requirement in this case?

² Those transmission lines are owned and operated by Associated Electric Cooperative, Inc. ("AECI"), and power is wheeled by AECI to Noranda under a separate transmission service arrangement between AECI and Noranda.

1	A. Mr. Weiss' retail jurisdictional cost of service study included Noranda at			
2	its full, historical load (approximately 470 MW). This is based upon Noranda's public			
3	disclosures about its expectations for returning to full production within approximately			
4	one year after the ice storm (by early 2010). Since new rates from this case will likely			
5	not take effect until early next summer, including Noranda at full load in the Company's			
6	filing matches Noranda's expectation about its production at that time. I would note that			
7	Noranda could encounter operational difficulties or other issues that prevent it from			
8	returning to full load, or could return to full load but later encounter operational			
9	difficulties or other issues that cause a reduction in load. This uncertainty is a key reason			
10	why the Company is proposing changes to Rate Schedule LTS in this case.			
11	Q. Do the proposed changes to Rate Schedule LTS address revenues lost			
12	by the Company as a result of the reduction in Noranda's load caused by the			
12	by the Company as a result of the reduction in Noranda's load caused by the			
12	January ice storm?			
13	January ice storm?			
13 14	January ice storm? A. No. The Rate Schedule LTS tariff changes address the risk of load			
13 14 15	January ice storm? A. No. The Rate Schedule LTS tariff changes address the risk of load fluctuations at Noranda on a prospective basis only. The Company has not included any			
13 14 15 16	January ice storm? A. No. The Rate Schedule LTS tariff changes address the risk of load fluctuations at Noranda on a prospective basis only. The Company has not included any lost Noranda revenues in the revenue requirement in this case.			
13 14 15 16 17	January ice storm? A. No. The Rate Schedule LTS tariff changes address the risk of load fluctuations at Noranda on a prospective basis only. The Company has not included any lost Noranda revenues in the revenue requirement in this case. Q. How does including Noranda at full load in the revenue requirement			
 13 14 15 16 17 18 	January ice storm? A. No. The Rate Schedule LTS tariff changes address the risk of load fluctuations at Noranda on a prospective basis only. The Company has not included any lost Noranda revenues in the revenue requirement in this case. Q. How does including Noranda at full load in the revenue requirement affect other customers?			
 13 14 15 16 17 18 19 	January ice storm? A. No. The Rate Schedule LTS tariff changes address the risk of load fluctuations at Noranda on a prospective basis only. The Company has not included any lost Noranda revenues in the revenue requirement in this case. Q. How does including Noranda at full load in the revenue requirement affect other customers? A. It means that Noranda is assigned a level of costs that equates to providing			
 13 14 15 16 17 18 19 20 	January ice storm? A. No. The Rate Schedule LTS tariff changes address the risk of load fluctuations at Noranda on a prospective basis only. The Company has not included any lost Noranda revenues in the revenue requirement in this case. Q. How does including Noranda at full load in the revenue requirement affect other customers? A. It means that Noranda is assigned a level of costs that equates to providing it service at full load, i.e. a greater portion of the Company's cost of service is assigned to			

1 MW), but Noranda has been ramping up its production since then. If the Company set its 2 revenue requirement based upon lower Noranda load, and if Noranda then increased its 3 load after rates are set in this case, other customers would be bearing a higher portion of 4 the Company's fixed costs through their rates while the Company would receive a higher 5 level of revenues from Noranda than had been included in the revenue requirement 6 calculation. The approach outlined herein takes away the upside that would have existed 7 for the Company, and thus does not enable the Company to receive more revenues from 8 Noranda under full load than assumed in the revenue requirement to be set in this case. 9 This is an appropriate and symmetrical approach given the changes to the Rate Schedule 10 LTS tariff discussed below.

11

Q. How does including Noranda at full load in the revenue requirement affect the Company? 12

13 A. Absent changing the Rate Schedule LTS tariff the Company is proposing, 14 it would put the Company at significant risk of suffering a substantial revenue shortfall 15 after rates are set in this case, like the revenue shortfall we experienced following the 16 devastating ice storm I mentioned earlier, should Noranda in fact not operate at full load. 17 The Company would experience this revenue shortfall while customers would continue to 18 benefit from both an allocation of a lower level of fixed costs as well as more off-system 19 sales revenues made possible by Noranda's reduced load, a portion of which would flow 20 back to customers through the FAC. Under the approach outlined herein, the Company 21 would in most scenarios not be at risk for this significant revenue loss, but as noted 22 earlier, would also receive no more revenues from Noranda than it was assumed it would 23 receive when rates in this case were set. This provides a more reasonable opportunity for

the Company to earn its allowed rate of return, and ensures that other customers will be
 unaffected by any variations in Noranda's load that may occur.

3

Q. Does uncertainty regarding Noranda's future load remain?

4 Absolutely. As of the time of filing this testimony, Noranda has still not A. 5 returned to full load following the ice storm. Noranda's financial situation is apparently 6 less than optimal, given its credit ratings and those of its parent company. It is my 7 understanding that aluminum prices remain at very low levels compared to historical 8 prices, as noted by Noranda in the Company's last rate case, and of course, there is 9 always the possibility that some kind of catastrophe (another ice storm, earthquake, 10 tornado, etc.) could reduce or eliminate Noranda's production in the future. Given the 11 unique circumstance of having one retail customer connected to AmerenUE's system via 12 a third party's transmission lines that represents fully six percent of the Company's retail 13 revenues, this uncertainty must be addressed in the design of the Company's rates.

14

Q. How does the Company propose to address this uncertainty?

We propose to modify the existing Rate Schedule LTS tariff to implement 15 A. 16 a minimum billing or "take-or-pay" structure based upon the Noranda load assumed in 17 the revenue requirement that is ultimately approved by the Commission in this case. 18 (The Company's filing assumes full Noranda load will be reflected in the revenue 19 requirement). In addition, we propose a mechanism that uses energy sales that could be 20 made from any shortfall in Noranda's usage to first, make the Company whole if 21 Noranda does not or cannot pay its minimum bill, and second, provide Noranda the 22 ability to use revenues from energy sales made by the Company as a credit against 23 Noranda's future minimum bill obligations to the Company.

1

Q. Please elaborate on how the proposed take-or-pay mechanism works.

- 2 A. Each month, Noranda will be billed at the greater of the amount due based 3 upon its actual consumption or the amount it would owe had it consumed at the level 4 assumed when rates were set in this case. This is called the "minimum monthly billing 5 amount" in section 9 of the proposed tariff. To the extent Noranda's consumption in a 6 given month is less than that assumed in this case (that difference is called the "Shortfall" 7 in section 11.a of the proposed tariff), the Company will sell the MWhs comprising the 8 Shortfall into the MISO energy markets and will credit Noranda's account for the net 9 proceeds of the sale, according to the formula in the proposed tariff. Under the proposed 10 mechanism, the Company will never receive more than the minimum monthly billing 11 amount from Noranda.
- 12

Q. How does the take-or-pay structure affect other customers?

Other customers are in precisely the same position they would have been 13 A. 14 in had Noranda actually consumed at the amount of power that was assumed when rates 15 were set. In other words, the revenue requirement assumes that a certain number of 16 MWhs would be supplied to Noranda and not sold off-system, and as noted earlier, costs 17 associated with serving Noranda at that load (fixed costs, fuel and purchased power) are 18 also assigned to Noranda. With the take-or-pay structure, precisely the same result exists. 19 Other customers pay no more and no less (through base rates or the fuel adjustment 20 clause) than they would have paid if, in fact, Noranda were taking each month at the load 21 that was assumed when rates were set. And, as noted, this approach produces revenues 22 for the Company that are no more and no less than if Noranda, in fact, was taking each 23 month at the load assumed when rates were set.

1

Q. How does this structure impact Noranda?

2 If Noranda consumes at the load assumed in the revenue requirement (or A. 3 higher), it has no impact on Noranda; Noranda will simply pay its bill based upon its 4 If Noranda consumes at less than the load assumed in the revenue consumption. 5 requirement, Noranda will still pay its minimum monthly bill, but Noranda will receive 6 revenues, from energy sales made possible by its lower consumption, to pay its minimum 7 bill. Moreover, during any period when energy prices received from those energy sales is 8 greater than Noranda's retail rate, Noranda has upside potential to obtain credits that 9 exceed what it owes AmerenUE. This structure is symmetrical in that Noranda could 10 also receive credits that are less than what it owes to AmerenUE (if energy prices are 11 lower than Noranda's retail rate). Thus Noranda has both the upside and the downside 12 respecting energy prices.

13

14

prices?

Q. Can't Noranda just shut down its operations and bet on higher energy

A. No. The revised Rate Schedule LTS tariff requires Noranda to consume at no less than 25% of its normal load. If it fails to do so, Noranda receives no credit, the proceeds from energy sales made due to reduced Noranda consumption to the extent necessary to pay the minimum monthly billing amount are retained by the Company, and all remaining energy sales proceeds flow through the Company's fuel adjustment clause as off-system sales, meaning other customers would receive 95% of the benefit of those additional energy sales.

Q. Does the Company remain at risk if Noranda does not or cannot pay
the minimum monthly billing amount?

1 In certain circumstances, yes. If Noranda cannot pay the minimum A. 2 monthly bill amount (due to insolvency, bankruptcy, or if it ceases to exist) and if energy 3 prices are lower than Noranda's retail rate under the Rate Schedule LTS tariff, then 4 energy sales enabled by Noranda's lower (or non-existent) load will not provide 5 sufficient revenues to cover the minimum monthly billing amount. In those 6 circumstances, the Company is at risk of suffering a revenue shortfall, while other 7 customers remain unaffected.

8 Q. Is there any scenario under the Company's proposed LTS tariff that 9 would yield revenues from the Noranda in excess of the amount assumed in the 10 revenue requirement for this case?

11 A. Yes. This condition would only exist where the Noranda's load is greater 12 than the load assumed in setting the revenue requirement in this case. However, this 13 condition would be true under the existing Rate Schedule LTS rate design as well, and is 14 not a function of the take-or-pay structure proposed now. In all other cases where 15 Noranda's load is equal to or lower than the amount assumed in setting the revenue 16 requirement, the Company will not receive revenues in excess of those assumed in the 17 revenue requirement. This approach ensures that the Company has no upside opportunity 18 from the take-or-pay provisions of this tariff, but rather, as indicated above, simply has a 19 more reasonable opportunity to earn the rate of return authorized in this case, and avoid 20 catastrophic loss of revenues.

21 Q. Is it at all likely that revenues from Noranda greater than those 22 assumed in the revenue requirement would be achieved under the Company's 23 proposal?

1 A. No. Because the Company is proposing that revenue requirement reflect 2 Noranda at full load, unless Noranda substantially expanded its plant capacity, it is very 3 unlikely that Noranda's consumption would be greater than that assumed in the revenue 4 requirement. 5 Q. Other than the minimum billing/take-or-pay provisions, is the 6 Company proposing any other changes to the Rate Schedule LTS tariff? 7 A. Only one that is marginally substantive, that is, to remove the Optional 8 Time-of-Day Billing rates to ease administration of the take-or-pay billing provisions. 9 The Time-of-Day Billing rates have never been used since Rate Schedule LTS was first adopted. 10 VI. 11 **OTHER TARIFF CHANGES** 12 Q. Please explain the Company's proposed revision to its Rules and 13 **Regulations Section V.G. Billing Practices.** 14 A. Currently, the residential billing adjustment tariff language does not 15 address corrections to metering data for meter error beyond the in-service date of the 16 meter nor for predecessor customers, whereas the non-residential tariff language indicates 17 that no billing corrections will be made for either of these conditions. The Company is 18 proposing to add the non-residential language to the residential billing adjustment 19 section. 20 Q. Has the Company evaluated the impact of this proposed change on 21 the revenue requirement that is being requested in this case? 22 A. No, it has not. However, the Company's experience has been that this 23 situation rarely occurs and, as a result, the impact would be minimal, if any.

1 Q. Does this conclude your direct testimony?

2 A. Yes, it does.

BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF MISSOURI

)

)

)

)

In the Matter of Union Electric Company d/b/a AmerenUE for Authority to File Tariffs Increasing Rates for Electric Service Provided to Customers in the Company's Missouri Service Area.

Case No. ER-2010-

AFFIDAVIT OF WILBON L. COOPER

STATE OF MISSOURI)) ss CITY OF ST. LOUIS)

Wilbon L. Cooper, being first duly sworn on his oath, states:

1. My name is Wilbon L. Cooper. I work in the City of St. Louis, Missouri, and I am employed by Union Electric Company d/b/a AmerenUE as Manager, Rates and Tariffs.

2. Attached hereto and made a part hereof for all purposes is my Direct Testimony on behalf of Union Electric Company d/b/a AmerenUE consisting of 32 pages, Schedules <u>WLC-El-WLC-E</u> all of which have been prepared in written form for introduction into evidence in the above-referenced docket.

3. I hereby swear and affirm that my answers contained in the attached testimony to the questions therein propounded are true and correct.

ilbon L. Cooper

Subscribed and sworn to before me this 24^{+4} day of July, 2009.

Notary Publi

My commission expires:

Term of Contract. Minimum term of three (3) years where only standard facilities are installed; ten (10) years where post-top luminaires are installed.

Discount for Franchised Municipal Customers. A 10% discount will be applied to bills rendered for lighting facilities served under the above rates and currently contracted for by municipalities with whom the Company has an ordinance granted electric franchise as of September 27, 1988. The above discount shall only apply for the duration of said franchise. Thereafter, the above discount shall apply only when the following two conditions are met: 1) any initial or subsequent ordinance granted electric franchise must be for a minimum term of twenty (20) years and 2) Company must have a contract for all lighting facilities for municipal lighting service provided by Company in effect.

Tax Adjustment. Any license, franchise, gross receipts, occupation or similar charge or tax levied by any taxing authority on the amounts billed hereunder will be so designated and added as a separate item to bills rendered to customers under the jurisdiction of the taxing authority.

GENERAL RULES AND REGULATIONS V. BILLING PRACTICES

- b. In the event of an undercharge, an adjustment shall be made for the entire period that the undercharge can be shown to have existed not to exceed twelve (12) monthly billing periods calculated from the date of discovery inquiry or actual notification of the Company, whichever was first;
- c. Where, upon test, an error in measurement is found to be within the limits prescribed by Commission rules, no billing adjustment will be made;
- d. When evidence of obstruction is found, or there are misrepresentations of the use of service by the customer, the Company will calculate the billing adjustment period in accordance with the applicable statute of limitations for the prosecution of such claim after determining the probable period during which such condition existed from all related and available information; and
- e. In any event, no billing adjustment will be made where the full amount of the adjustment is less than one dollar (\$1) and no interest shall be paid or collected on any billing adjustment provided for herein.
- *f. No corrections to metering data for meter error shall extend beyond the in-service date of the meter discovered to be in error, nor shall any correction be required to extend beyond the date upon which the current customer first occupied the premises at which the error is discovered.
- 2. <u>Non-Residential</u> For all non-residential billing errors, the Company will determine from all related and available information the probable period during which the error condition existed and shall make billing adjustments for the estimated period involved as follows:
 - a. No billing adjustment will be made where the dollar amount of the adjustment is less than \$15.00. No interest shall be paid or collected on any billing adjustment provided for herein.
 - b. Where upon test an average meter error is found to be greater than 2 percent a billing adjustment will be made to compensate customer where the meter reads fast, and to compensate Company where the meter reads slow. However,

MO. P. S. C. SCHEDULE NO.	5	4th Revised	SHEET NO.	68.1

CANCELLING MO. P.S.C. SCHEDULE NO. 5 3rd Revised SHEET NO. 68.1

MISSOURI SERVICE AREA

	LARGE TRANSMISSION SERVICE RATE (Cont'd.)
1.	Transmission Service Requirements. Company's obligation to provide service under this service classification is conditioned upon receipt of approval from the appropriate Regional Transmission Organization ("RTO") to incorporate customer's load within Company's Network Integration Transmission Service agreement without the obligation or requirement that Compan construct, upgrade, or improve any existing or new transmission plant or facilities.
	Customer shall be responsible for securing firm transmission service throughout the Contract Term outside of Company's control area at no cost or charge to Company (except for Energy Line Losses), if necessary, and customer agrees to indemnify and hold Company harmless from all such costs or charges imposed or billed. In any event, customer shall be responsible for all costs and charges imposed or billed to Company from an RTO that are based on the fact that customer's load is not directly connected to Company's system (e.g. Through and Out rates imposed by the Midwest Independent System Operator, Inc.)
2.	<u>Credit Requirements.</u> A customer taking service under this service classification shall agree to the following special credit terms and conditions, in addition to those that may be required pursuant to Company's rules, regulations, rates or tariffs. In addition to and without limiting Company's other rights and remedies in law and at equity, Company, upon request and in its sole discretion, may demand of customer a security deposit in the form of cash, letter of credit or surety bond, equal to two times (2x) the highest monthly utility bill from the prior 12-month period, upon the occurrence of any of the following:
	 an assignment to customer or customer's parent of a long- term public debt rating by Moody's that falls below the rating of Baa3;
	b. an assignment to customer or customer's parent of a long- term public debt rating by Standard & Poor's that falls below the rating of BBB-;
	 c. a significant change in ownership, as determined by Company, including but not limited to a change in ownership or possession of the assets of customer;
	 d. the assessment of two (2) late payment charges within any 12 month rolling period; or
	e. Customer makes an assignment for the benefit of creditors, or otherwise becomes bankrupt or insolvent (however evidenced).

APPLYING TO

MISSOURI SERVICE AREA

* SERVICE CLASSIFICATION NO. 12 (M) LARGE TRANSMISSION SERVICE RATE (Cont'd.)

- 3. Payments. Bills are due and payable within ten (10) days from date of bill.
- 4. Contract Term. A Customer taking service under this service classification shall agree to an initial Contract Term of 15 years. The Contract Term shall be extended in one-year increments unless or until the contract is terminated at the end of the Contract Term or any annual extension thereof by a written notice of termination given by either party or received not later than five years prior to the date of termination. During the Contract Term, a customer taking service under this service classification agrees that Company shall be the exclusive supplier of power and energy to customer's premises, and waives any right or entitlement by virtue of any law, including but not limited to Section 91.026 RSMo as it now exists or as amended from time to time, statute, rule, regulation, or tariff, to purchase, acquire or take delivery of power and energy from any other person or entity.
- 5. Tax Adjustment. Any license, franchise, gross receipts, occupation or similar charge or tax levied by any taxing authority on the amounts billed hereunder will be so designated and added as a separate item to bills rendered to customers under the jurisdiction of the taxing authority.
- 6. **Rate Application.** The rates specified in this service classification shall be applicable to any customer that satisfies all of the following: 1) meets the Rate Application conditions of the Large Primary Service rate, 2) if necessary, arranges and pays for transmission service for the delivery of electricity over the transmission facilities of a third party, 3) does not require use of Company's distribution system or distribution arrangements that are provided by Company at Company's cost, excepting Company's metering equipment, for service to customer, and 4) meets all other required terms and conditions of this service classification.
- 7. Character of Service Supplied. Company will supply a standard three-phase alternating current transmission service voltage. The appropriate adjustments under Rider C will apply; however, there will be no adjustments under Rider B.
- 8. Demand Meters. Company will be responsible for the demand meters which have been installed for the measurement of demands.

* SERVICE CLASSIFICATION NO. 12 (M) LARGE TRANSMISSION SERVICE RATE (Cont'd.)

9. Minimum Billing. Customer's minimum monthly billing amount owed to the Company in each billing month (which shall correspond to the calendar month) shall consist of the applicable Customer Charge, plus the Demand Charge, Energy Charge and Reactive Charge, as specified on Sheet No. 68, applied to the greater of: a) the kWhs used by the Company in the development of the Energy Charges and the kW and kVar used by the Company in the development of the Demand Charges and the Reactive Charge (including the energy line loss rate provided for above) or b) the billing units that would be applicable to the customer's facility for the billing month in the absence of part a) of this sentence. In exchange for customer's obligation to pay its minimum monthly billing amount, Company shall be obligated to tender a quantity of kWh each calendar month equal to the greater of part a) or b) in the immediately preceding sentence; provided, that if less than the quantity of kWh provided for in part a) is taken by customer in a month the provisions of section 11, below, shall apply.

The billing demand used to calculate the Demand Charge under b) shall be the highest demand established during peak hours or 50% of the highest demand established during off-peak hours, whichever is highest during the month, but in no event less than 5,000 kilowatts.

Peak hours and off-peak hours are defined as follows:

Peak hours: 10:00 A.M. to 10:00 P.M., Monday through Friday. Off-peak hours: All other hours including the entire 24 hours of the following days: New Year's Day, Independence Day, Thanksqiving Friday, Good Friday, Labor Day, Christmas Eve Day, Memorial Day, Thanksgiving Day, Christmas Day. All times stated above apply to the local effective time.

10. Reactive Charge. The kVar charge specified in this service classification shall be applicable to the kilovars by which the customer's average metered kilovars exceed the customer's kilovars at an average power factor of 90% lagging during the billing period. Such average kilovar billing units shall be determined in accordance with the following formula:

$$kVar = \left(\frac{kVarh}{kWh} - 0.4843\right)(kW)$$

	any RSG-type charges) in power markets to which the Company has reasonable access shall be used as the Net Energy Price to determine the Net Monthly Credit called for above.
b	. Notwithstanding any term or condition of Rider FAC to the contrary, the sums credited to customer's account as provided for in 11.a above shall be recorded to Account No. 421, and the real time energy transactions and the associated Net Energy Credits shall not constitute Off-System Sales in factor OSSR in Rider FAC, and they shall not be reflected in any other component of determining rate adjustments under Rider FAC.
c	All right, title and interest in and to energy that is sold to generate the Net Monthly Credit is property of the Company and shall remain with the Company until the energy is actually sold to the buyer thereof. All right, title, and interest in and to the proceeds of energy that is sold to generate the Net Monthly Credit is property of the Company. If at the time a Net Monthly Credit is to be posted to customer's account customer has not paid its prior minimum monthly billings in full (even if customer is insolvent, bankrupt, dissolved or otherwise ceases to exist), the Company shall be entitled to retain that portion of the Net Monthly Credit (calculated as if customer were not insolvent, bankrupt, dissolved or otherwise not in existence) that is necessary to cover any such under-payment.
d	. Notwithstanding the provisions of 11.a and 11.b above: Where a customer taking service under this service classification fails to demonstate a metered demand of at least 25 percent of the kWh used by the Company in the development of the Energy Charge in any given monthly billing period, then the Net Monthly Credit for that billing month, determined as provided for in 11.a above, shall be capped at an amount that is equal to the minimum monthly bill amount less the monthly bill amount that would be applicable to customer's facility for the billing month in the absence of part a) of Section 9. The positive difference between the credit calculated under 11.a and the capped credit amount calculated under this 11.d, if any, shall constitute Off-System Sales in factor OSSR in Rider FAC.

SERVICE CLASSIFICATION NO. 12 (M) LARGE TRANSMISSION SERVICE RATE (Cont'd.)

- e. Where a customer entirely ceases taking service under this service classification for any reason (including due to plant shut down, bankruptcy, dissolution, or otherwise), the provisions of 11.a through 11.c shall continue to apply to customer's billing quantities under 9.a) above until the occurrence of the first of the following two events: (i) the effective date of new rates resulting from a general rate proceeding for the Company that is concluded after customer ceases taking service under this service classification, or (ii) until the end of the initial Contract Term (June 1, 2020).
- f. To the extent not all of the data necessary to determine the Net Monthly Credit for a billing month exists at the time a monthly bill is sent to customer, the Company will estimate the sums necessary to calculate the expected Net Monthly Credit (if any). Later bills shall be adjusted to reflect any changes in the previously billed amounts once actual data is available.
- 12. General Rules and Regulations. In addition to the above specific rules and regulations, all of Company's General Rules and Regulations shall apply to the supply of service under this service classification.
