21 Deposition of Janice Pyatte, taken  
22 November 28, 2001, and errata sheet thereto  
23  
24  
25

1 (EXHIBIT NO. 1 WAS MARKED FOR IDENTIFICATION  
2 BY THE COURT REPORTER.)

3 JANICE PYATTE, being duly sworn, testified as follows:

4 DIRECT EXAMINATION BY MR. BYRNE:

5 Q. My name is Tom Byrne, and I'm an attorney  
6 for Union Electric Company doing business as AmerenUE.

7 Today we are here to take the deposition of  
8 Janice Pyatte of the Missouri Public Service  
9 Commission Staff in Missouri Public Service Commission  
10 Case No. EC-2002-1.

11 Good morning, Ms. Pyatte -- or good  
12 afternoon, Ms. Pyatte.

13 A. Good afternoon, Mr. Byrne.

14 Q. Before we get started, I need to go over  
15 some preliminary matters as I did this morning with  
16 Mr. Watkins' deposition, so bear with me.

17 First of all, I would like to ask, if you  
18 don't hear one of my questions or completely  
19 understand the question, will you ask me to repeat it  
20 or clarify it?

21 A. Yes, I will.

22 Q. So that if you give an answer to a question,  
23 essentially you will be saying that you heard and  
24 understood the question; is that fair?

25 A. I think that's fair.

1 Q. Okay. Are you taking any medication that  
2 might affect your ability to understand and answer my  
3 questions?

4 A. No.

5 Q. Do you know of any other factor that might  
6 impair your ability to understand and answer my  
7 questions?

8 A. No.

9 Q. If you need to take a break at any time,  
10 will you let me know?

11 MR. WILLIAMS: You need to answer verbally.

12 THE WITNESS: Oh, yes.

13 BY MR. BYRNE:

14 Q. Okay. And we will -- we can stop whenever  
15 you want or need to.

16 And, finally, the terms, as I clarified  
17 for -- in Mr. Watkins' deposition, if I say UE or  
18 AmerenUE or the Company or Union Electric Company, I'm  
19 referring to Union Electric Company. Is that okay?

20 A. That's fine.

21 Q. And Ameren, if I say Ameren, I'll be  
22 referring to Ameren Corporation. Is that okay?

23 A. That's fine.

24 Q. Okay. Could you please state your name?

25 A. My name is Janice Pyatte.

1 Q. And by whom are you employed?

2 A. The Missouri Public Service Commission.

3 Q. And in what capacity are you employed at the  
4 Commission?

5 A. I am a Regulatory Economist III in the  
6 Utilities Operation Division and the Energy  
7 Department.

8 Q. Okay. And you are the same Janice Pyatte  
9 that filed Direct Testimony addressing sales and  
10 revenues and rate design in Case No. EC-2002-1 in both  
11 July of 2001 and March of 2002?

12 A. Yes.

13 Q. And does the latest version of your  
14 testimony from March of 2002 consist of 22 pages and  
15 eight schedules?

16 A. I believe that it has 27 pages and eight  
17 schedules --

18 Q. Okay.

19 A. -- not 22.

20 Q. Okay. And do you have a copy of your  
21 testimony?

22 A. Yes, I do.

23 Q. Okay. And are you also the same Janice  
24 Pyatte that I deposed in this proceeding on  
25 November 28th, 2001?

1 A. Yes.

2 Q. And before we went on the record, the court  
3 reporter marked some documents as Exhibit 1. Can you  
4 identify those documents for me?

5 A. The top three pages are errata sheets to my  
6 deposition as of November 28th of last year, and  
7 behind that appears to be a copy of the deposition  
8 itself.

9 Q. Okay. And does the errata sheet that you  
10 provided contain all of the corrections that you  
11 wanted to make to the deposition, either typographical  
12 errors or more substantive corrections?

13 A. Yes.

14 Q. And do you have any additional corrections  
15 that you want to make since the -- that you've  
16 discovered since you sent in the errata sheet?

17 A. No.

18 Q. Okay. How about to the latest version of  
19 your Direct Testimony? Do you have any corrections  
20 that you need to make to that?

21 A. Yes, I have one. On page 25, line 3, the  
22 second to the last word on the line where it says  
23 "general," as in large general service, it should be  
24 large primary service.

25 Q. Okay.

1           A.       So that whole line should read, "As a  
2 result, rate continuity between the small primary  
3 service and the large primary service rate schedules  
4 was negatively affected."

5           Q.       Okay. Any other corrections to your Direct  
6 Testimony?

7           A.       No.

8           Q.       Okay. Has your job title or employment  
9 status changed since I last took your deposition on  
10 November 28th?

11          A.       No.

12          Q.       And let me ask you this: Is your -- the  
13 March 1 version of your Direct Testimony essentially  
14 the same as the earlier version except that you  
15 updated the information to reflect the July 2000  
16 through June 2001 test year for kilowatt hour and  
17 revenue data?

18          A.       There were a number of differences, and  
19 there are three places in my testimony, and I can give  
20 you the cites, that describe in some sort of general  
21 way what those are.

22          Q.       Okay.

23          A.       And then if you want more detail, I can tell  
24 you those verbally.

25          Q.       Why don't you just tell me where they are,

1 the cite?

2 A. The first cite is on page 3, line 20, and  
3 going to page 4, line 9. And this has to do with  
4 sales and revenues.

5 The second cite is on page 22, lines 7  
6 through 11. This has to do with rate levels.

7 And the third cite is on page 24, line 22,  
8 through page 25, line 4, and that has to do with the  
9 overall approach to implementing the rate design  
10 recommendation that was in Mr. Watkins' testimony.

11 Q. Okay.

12 A. If it's helpful, let me say that in terms of  
13 sales and revenues, your original characterization was  
14 updating for the test year is pretty much correct, as  
15 long as you recognize that when you do that adjustment  
16 you had in one case may not be applicable to another.  
17 But there is no change in the overall approach or  
18 methodology for sales and revenue.

19 Q. Okay. Great. I'd like to look at  
20 schedule 2 attached to your Direct Testimony for a  
21 moment. Can you turn to that?

22 MR. WILLIAMS: Are you referring to the  
23 March filing?

24 MR. BYRNE: Yeah. I'm sorry. I am  
25 referring to the March filing.

1 BY MR. BYRNE:

2 Q. And, I guess, let me say, unless I specify  
3 otherwise, if I say your Direct Testimony, that means  
4 the March 2002 version of the Direct Testimony; is  
5 that okay?

6 A. That's fine.

7 Q. Okay. So I'm looking at schedule 2 on your  
8 March 2002 testimony.

9 And I guess -- I was wondering if just in  
10 general you could tell me what that schedule does.

11 A. This schedule represents a summary of  
12 Missouri retail kilowatt hour sales by rate schedule.  
13 That's what its title is. And, essentially, what it  
14 shows is, for the various rate schedules, it has a  
15 series of columns that take you from the test year  
16 billed kilowatt hour sales up through the test year  
17 adjusted kilowatt hour sales that Staff was using in  
18 this case, and the various columns in between show you  
19 essentially the various adjustments that were done.

20 Q. Okay. Well, let me -- one thing I was  
21 wondering is where you got all of the columns --  
22 information in the columns, and maybe we could start  
23 with the first column which is entitled, "Test Year of  
24 Billed Kilowatt Hour Sales"?

25 A. Okay.

1 Q. Would you have gotten that information from  
2 the Company?

3 A. I got that from the Company.

4 Q. Okay. Like, in response to a data request?

5 A. Yes.

6 Q. Okay. Okay. Then the next column over is  
7 "Miscellaneous Adjustments." What are those?

8 A. Those were adjustments that I called  
9 miscellaneous, and they were adjustments made to test  
10 year billed kilowatt hour sales for a number of  
11 things. Let me go through them very briefly.

12 The adjustment to large general service  
13 that's shown there, the 40,403 was an -- what I would  
14 call an out-of-period adjustment. There was a bill  
15 that was cancelled, and I believe it was showing up on  
16 the books in this test year but really belonged in the  
17 prior -- in the month before the test year.

18 Q. Okay. That was just a single bill or --

19 A. I think so.

20 Q. Okay.

21 A. Let's go down to public authorities. That  
22 was a situation where the Company's reports do not  
23 record any kilowatt hours for that rate group. It's  
24 on a different horsepower type of rate, and what I did  
25 was use data from -- from another source but yet from

1 the Company to at least get an estimate of the  
2 kilowatt hours that should go for that particular rate  
3 class. And the concern there was that the Company's  
4 records, as I got them, show revenue but no sales. So  
5 I was trying to balance.

6 Q. Do you remember what the other Company  
7 source was that you used for that?

8 A. I would have got that from a data request,  
9 and I got information on that specific customer and  
10 the specific accounts that that customer has.

11 Q. So there is only one public authority  
12 customer?

13 A. Yes.

14 Q. What is it, just out of curiosity?

15 MR. WILLIAMS: Do you want to -- I think  
16 that's HC.

17 MR. BYRNE: Oh, okay. Never mind. I  
18 withdraw the question.

19 BY MR. BYRNE:

20 Q. Okay. Go ahead. I interrupted you.

21 On the other -- on the other ones, the large  
22 primary service.

23 A. On the interruptible, the adjustment there  
24 was a situation where the interruptible tariff had  
25 actually been cancelled prior to the beginning of this

1 test year, but the Company's book showed both sales  
2 and revenues in the test year for that group.

3           Given work I had done for the prior filing  
4 in this case, I knew that what that represented was a  
5 spillover effect because the -- what had happened was  
6 the tariff had been cancelled when it should have  
7 been; however, it took two or three months later  
8 before all of the customers' bills got in the system  
9 correctly. In particular, there was one customer and  
10 I think it took them three tries to get them billed  
11 right.

12           So what this was was this was a case where  
13 these -- these kilowatt hours and -- that are -- that  
14 are showing up in the Company's records in the test  
15 year really belong to the period prior to the test  
16 year, and so that's why I made that adjustment.

17           The last miscellaneous adjustment is the  
18 large primary service, and this was a very different  
19 situation. The way we did large primary service in  
20 this case was we got every bill for every customer in  
21 that particular group and made sure they were all  
22 internally consistent and whatnot.

23           And when you added up all of the bills of  
24 all of the customers, what you found or what I found  
25 was that the kilowatt hours for that group as a whole

1 were not matching what was on the Company's books.  
2 And this was the situation where I made an adjustment  
3 to the Company's books which is implicitly saying that  
4 I'm going to rely exclusively on all of the bills of  
5 all of the customers as being the authoritative source  
6 of kilowatt hour sales for that class rather than the  
7 Company's aggregate records.

8 Q. Okay. Let me ask you about your discussion  
9 of the adjustment to interruptible, and my  
10 understanding of your explanation is it's kind of a  
11 spillover bill from a -- spillover bills from a prior  
12 period and now the interruptible rate is cancelled.

13 Is there the same problem at the end of the  
14 test period where you might have -- it might have been  
15 appropriate to make an adjustment for spillover bills  
16 that go into the next period?

17 A. It's conceivable. I didn't look at it --

18 Q. Okay.

19 A. -- specifically. If there was such a thing,  
20 it certainly wouldn't affect this class, but it --

21 Q. It could affect a class?

22 A. Yeah. But where it would potentially affect  
23 it is large primary. The other class -- the other  
24 classes I am using -- well, no.

25 Let me back up and say, there is some

1 possibility that there is spillover effects outside of  
2 the test year on the other end that could have  
3 happened that I don't know about.

4 Q. Okay. And could there be spillover effects  
5 at the beginning of the test year for the other rate  
6 classes similar -- I mean, it's obviously not the  
7 same, but the same type of thing as it was for the  
8 interruptible?

9 A. Well, I would guess that their -- that it is  
10 possible, and I guess that to the extent that I didn't  
11 account for it, kind of the assumption I'm making is  
12 the spillover effects at the beginning and the  
13 spillover effects at the end sort of a wash out, but I  
14 don't know that for a fact.

15 Q. And not with the interruptible class because  
16 there is no more interruptible class?

17 A. Right, right. Well -- and that's the reason  
18 I did that specifically because it just stood out so  
19 much that you could see it.

20 Q. Okay. Okay. Let's move on to the next  
21 column which was annualization for rate switching.  
22 And I guess the broad question is, where did you get  
23 the numbers? Did you develop these numbers or did  
24 someone -- another Staff witness give them to you?

25 A. I am responsible for developing those

1 numbers.

2           What we had here is we had -- these  
3 represent two -- two individual customers, one that  
4 switched in the middle of the test year from small  
5 primary service to large primary service, and the  
6 other was a customer who had been there as a large  
7 primary service customer the entire time period, but  
8 when I looked at the end of the update period, which  
9 was September, what I found is this customer's load  
10 for the test year was no longer representative of his  
11 current load.

12           And so what I did is I took -- in effect,  
13 I -- I took what -- an estimate of what I thought that  
14 customer's new load would be, given what data I had,  
15 and substituted it for his older, higher load that  
16 actually occurred in the test year, and in the  
17 process, I also switched him from large primary to  
18 small primary.

19           Q.     Okay.

20           A.     So, anyway, those are the two things that --  
21 that I dealt with and --

22           Q.     Is this a pretty common type of adjustment  
23 in rate cases and complaint cases involving rates?

24           A.     When I do this, I do it.

25           Q.     And you didn't do anything -- I mean, you

1 did it the way you always do it, I guess, the method  
2 that you used?

3 A. Well, yeah. What I do is I look at the end  
4 of the update period to determine whether or not what  
5 I see in the test year is representative, and to the  
6 extent that it isn't, I will try to make an adjustment  
7 for it on an individual customer basis.

8 Q. Okay.

9 A. Okay. Which -- which, as I explained in  
10 this case meant that one of the customers there -- in  
11 effect, I pulled him out and I said, I'm not going to  
12 count on sales from him next year. And in another  
13 situation which didn't show up here but would be  
14 analogous is if I found out a very, very large  
15 customer is coming on that wasn't represented in the  
16 test year at all. I would get an estimate and put him  
17 in.

18 Q. That would work the opposite direction?

19 A. Right. Right. So it's all dependent on the  
20 test year and what's going on.

21 Q. And the point is, you know, it seems to  
22 me -- correct me if I'm wrong, but is the point that  
23 you're trying to decide what would be representative  
24 usage in the future, not what happened -- you know,  
25 not exactly what happened in the test year?

1           A.       That's the overall idea.

2                   Now, what I do not do, unless it's really  
3 obvious, is I don't go into specific customers and  
4 adjust them unless I can -- I have verification that  
5 some substantial thing has changed on them. I am not  
6 looking and saying, Well, three years ago this guy was  
7 using this many kilowatt hours. Now, he's only using  
8 that many, because there is a lot of variation that  
9 goes on there.

10                   So unless I have -- it's an exception.  
11 Unless I have information that tells me that this  
12 customer's test year usage was unusual, I will assume  
13 it's representative.

14           Q.       Okay. Next column is normalization for  
15 weather, and I think I know the answer to this one, so  
16 let me suggest the answer is this -- was this data  
17 provided to you by Ms. Mantle?

18           A.       Yes.

19           Q.       So you didn't -- she calculated the numbers.  
20 You did not?

21           A.       That's right.

22           Q.       And then on the next column, normalization  
23 for 365 days, is that also a Ms. Mantle calculation?

24           A.       Yes.

25           Q.       She just -- you had nothing to do with

1 developing those numbers?

2 A. That's right.

3 Q. You just took them from her?

4 A. I'm just trying to put together a summary  
5 table of all of the pieces.

6 Q. And you're not providing any evidence of the  
7 reasonableness of the those numbers?

8 A. No.

9 Q. She is.

10 A. No. And my testimony makes clear that these  
11 summary tables are the result of the work done by  
12 myself, Ms. Mantle and Mr. Gibbs.

13 Q. Okay. Which brings us to the second  
14 right-most column which is "Growth Adjustments." And  
15 is it true that Mr. Gibbs developed those numbers?

16 A. Yes.

17 Q. Okay. And, again, you didn't -- you're not  
18 providing any support for them. You're just  
19 summarizing them?

20 A. That's correct.

21 Q. And then the final column is "Test Year  
22 Adjusted Kilowatt Hour Sales," and is that just the --  
23 taking all of the adjustments into account, that's  
24 what the total ends up being for each rate schedule?

25 A. Yes.

1 Q. Okay.

2 A. And at the lower right-hand corner, that's  
3 what I'm saying are total Missouri retail sales. So  
4 that's the total in the far right.

5 Q. Okay. So a high-level summary of the chart  
6 is you started out with 31,815,803,601 billed kilowatt  
7 hour sales, and you ended up with 31,085,801,575  
8 adjusted kilowatt hour sales; is that true?

9 A. That's correct.

10 Q. Okay. Now, if you could turn to schedule 3  
11 also on your March 2002 Direct Testimony, there is a  
12 similar chart there, except -- well, could you explain  
13 what schedule 3 does?

14 A. Schedule 3 is -- is the summary table of  
15 Missouri retail rate revenues by rate schedule. It's  
16 analogous to the table we just looked at, which is the  
17 summary of the kilowatt hour sales. This just happens  
18 to be the money that goes with it.

19 And the money in the various columns are the  
20 money, the revenues, that correspond to the kilowatt  
21 hours sales adjustment that we've already discussed.

22 Q. Okay. So everywhere there is a number of  
23 kilowatt hours on the chart in schedule 2, is there a  
24 corresponding dollar amount on the chart in the same  
25 location in schedule 3?

1 A. Yes.

2 Q. Okay. And, I guess, once again, I'd like to  
3 try to figure out how you got the dollars.

4 Would the -- starting on schedule 3 in  
5 the -- well, the second column, or I guess the first  
6 column where there is dollar amounts, it says, "Test  
7 Year Billed Revenue." Are those dollar amounts in  
8 that column dollar amounts that you got from the  
9 Company?

10 A. Yes.

11 Q. Okay. And -- okay. Then miscellaneous  
12 adjustments we talked about before. How did you  
13 assign dollars to the kilowatt hours you had  
14 calculated for those?

15 A. Okay. In the case of the interruptible,  
16 that was simply the dollars that were on the Company's  
17 records. The large general service, that cancelled  
18 bill, that was simply the dollars that were there.

19 On the large primary service, now, that was  
20 the case where the adjustment that's sitting there is  
21 the difference between the revenue that the Company  
22 has recorded as test year billed and the sum of all of  
23 the bills that the Company provided me.

24 Q. And so you just subtracted the bills --

25 A. That's right.

1 Q. -- from the recorded revenues --

2 A. That's right.

3 Q. -- and that gave you the revenue amount?

4 A. That's right.

5 Q. Okay. And then let's move over to the next  
6 column which is entitled "Annualization for Rate  
7 Switching." Again, if you could just briefly tell me  
8 how you got translated kilowatt hours into dollars?

9 A. Okay. These are the two customers in  
10 question, and in both cases what I did was the  
11 kilowatt hours that I had -- had adjusted on the prior  
12 table were part of the billing units for the specific  
13 guys. And, essentially, I just repriced the new  
14 billing units on whatever the appropriate rate was.

15 So in a case where a customer was part of  
16 the year on small primary, then moved to large  
17 primary, this was a case where the customer's load  
18 didn't change. He just changed rates.

19 What I did was I took out the piece of the  
20 year where he was in small primary. I took it out  
21 from small primary. I took his billing units. I  
22 priced it on large primary, and that's what I replaced  
23 it with.

24 Okay. So it's not just a thing where you  
25 shift it from one place to the other like it is sales,

1 because with sales, it nets to zero. With revenues,  
2 it doesn't.

3 And in the case of the customer who became  
4 much smaller, I simply took my estimate of the billing  
5 units which included the sales on the first table,  
6 priced them out at the small primary rate, and put  
7 them there.

8 Q. Okay.

9 A. So I -- the process is consistent.

10 Q. Okay. And you -- I mean, you're essentially  
11 using the rates that were prevailing during the test  
12 year times the volumes of your adjustment?

13 A. Right. Right.

14 Q. Okay. Let's go to the next column, which  
15 was the normalization for weather data that Ms. Mantle  
16 provided you.

17 A. Okay. Now, here is a case where I  
18 calculated the dollars, and if you look at  
19 schedule 4-1 and 4-2 right after these, it will show  
20 you exactly how I calculated those dollars.

21 So if -- you'll see by class, you'll see  
22 revenue adjustments. See the bold down in the lower  
23 right-hand corner of each of the little tables, those  
24 are the numbers that are in the column called  
25 Normalization for Weather.

1           And then on schedule 4-2, the middle  
2 right-hand corner, it shows the way that I calculated  
3 the dollars that corresponded to what we're calling  
4 here the normalization for 365.

5           So all of the details of where those dollars  
6 came from are on schedule 4.

7           Q.     Okay. And I understand what you've got. It  
8 seems like on schedule 4.1 and 4.2 -- or 4-1 and 4-2  
9 you've got it broken down by rate class and then by  
10 month. You've got a quantity of megawatt hours of a  
11 weather adjustment times a rate, and then you get a  
12 revenue adjustment for each month, and then you total  
13 all of the months. And that -- that gets you the  
14 total for each class.

15          A.     Yes.

16          Q.     I guess my question is, how -- where did you  
17 gets the rate?

18          A.     Well, the rates are UE current rates. And  
19 they -- the reason it's done by month is because our  
20 rates that -- the UE rates change based on a season,  
21 so it was important to do at least on a seasonal  
22 basis.

23                 So the simple answer is, I got the rates off  
24 of the currently effective tariff sheets. The more  
25 complicated answer is, the decision on which rate to

1 get off the specific tariff sheet was a function of  
2 the season that Ms. Mantle's numbers represented  
3 because these are billing month numbers, and a  
4 specific rate block, if there is block rates.

5 And what I did there was, if there were  
6 multiple choices, okay, say, you have three rate  
7 blocks, you have three prices you could choose, what I  
8 did is, I went back to a -- an agreement that we had  
9 in the past on how to price the weather adjustment to  
10 sales from the -- I believe it was the merger case.

11 What -- we had this methodology. It was in  
12 an appendix and -- to a case, and what it says is, the  
13 way we're going to figure out what the total amount of  
14 money is that is represented by the weather normalized  
15 first three years of credits for the EARP was we were  
16 going to price it in a specific way, and it was that  
17 document that I went back to and said, This looks like  
18 a reasonable method, because it was saying, you go to  
19 the tail block, you go to the first block, and I  
20 simply used that methodology and using the rate values  
21 that are in the current tariff.

22 Q. Okay. And is that -- you may not know this,  
23 but is that, the merger docket, Case No. EM-96-149?

24 A. I believe that's the case.

25 Q. And it was an attachment. I've got written

1 down here attachment 1 attached to the Commission's  
2 order in that case. Does that sound like --

3 A. I know it was an attachment. It would be  
4 called attachment something or appendix something.

5 Q. Attached to the Commission's order?

6 A. Well, yes, because I believe the Stipulation  
7 and Agreement would have been attached to the  
8 Commission's order, and it would have been a piece of  
9 it.

10 Q. Okay. And then that case was -- was  
11 resolved by Stipulation and Agreement; is that  
12 correct?

13 A. I believe so.

14 Q. And when you say agreement by the parties,  
15 you're talking about -- well, who agreed to it? I  
16 guess --

17 A. The Company, Staff, probably industrial  
18 interveners, the State of Missouri, the usual folks  
19 that are probably interveners in this case.

20 Q. Okay. But, I guess, would it be fair to say  
21 that the agreement of the parties and the Stipulation  
22 that had that attachment to it was only for that case,  
23 was it not?

24 A. That's true.

25 Q. And so -- you know, there is standard

1 language. I don't have the Stipulation in front of  
2 me, but there is standard language in the Stipulations  
3 and I'm sure it's probably in that that says nobody is  
4 bound in future cases by anything. Is that correct?

5 A. I'm certain that's correct.

6 And I did not choose this methodology  
7 because I felt I was compelled to. It simply was  
8 something that seemed reasonable that was easy to  
9 implement and --

10 Q. Okay.

11 A. -- I did it.

12 Q. And you're not saying either that any other  
13 parties are bound to accept this?

14 A. Oh, no, no, no. I'm not saying that at all.

15 Q. Okay.

16 A. I just said that that's a reasonable way,  
17 and that's where I got it.

18 Q. Okay. That makes sense.

19 Do you think you could -- maybe you already  
20 did this, but do you think you could explain to me how  
21 it works?

22 A. How it works. How what works?

23 Q. How the methodology.

24 A. This one?

25 Q. Yes.

1 A. Oh, I can explain this to you.

2 Q. Okay.

3 A. Okay. If you look on schedule 4-1, okay,  
4 pick -- pick residential, for example. You see the  
5 column says "Weather Adjustment Megawatt Hours."

6 Q. Yes.

7 A. Okay. Those are the numbers from Ms. Mantle  
8 that represents the megawatt hours' worth of  
9 adjustment for that class for that month.

10 Q. Okay.

11 A. Okay. Then the next column says the rate in  
12 dollars per -- dollars per kilowatt hour. Yeah.

13 Anyway, then you've got the revenue  
14 adjustment, which you multiply one times the other and  
15 you get --

16 Q. Okay. I do understand that. I'm slow, but  
17 I'm not quite that slow.

18 A. Okay. Well, I wondered.

19 Q. But I guess what I'm trying to ask you, and  
20 maybe you answered it before and I -- it just went  
21 over my head, but how does -- pursuant to the  
22 methodology in that attachment 1 from Case  
23 No. EM-96-149, how do you calculate the rate?

24 Exactly what do they do? Do they take some  
25 from the first block and some from the last block?

1 Exactly, how does that rate get calculated?

2 A. Oh. Well, this -- all this methodology is  
3 implying is that all of the adjustment due to weather  
4 is occurring in a single rate block.

5 Q. Okay.

6 A. That is not -- that is not occurring in  
7 multiple rate blocks. It's occurring in one rate  
8 block and it's the rate block that corresponds to the  
9 price that I have here.

10 Q. Is it the last rate block?

11 A. It depends on which particular group. For  
12 residential, 8.13 cents I believe is the first rate  
13 block, and I believe that in the winter the 5.77 cents  
14 is probably the first rate block. But if I look down  
15 for some of the other classes, it may be that I've got  
16 the tail block, the last block, the lowest block.

17 That's what I'm saying is when I said I -- I  
18 used the methodology from that -- the attachment to  
19 the Stip we were using in some other case that wasn't  
20 binding. What it was specifying is use -- assume all  
21 of the weather adjustment occurs in this particular  
22 block, and then it is laid out for each class, each  
23 rate schedule, which block we assumed that it occurred  
24 in.

25 Q. Okay. And the residential is the first

1 block. Right?

2 A. That's my guess.

3 MR. WILLIAMS: Can we stop just a minute?

4 MR. BYRNE: Sure.

5 (A DISCUSSION WAS HELD OFF THE RECORD.)

6 THE WITNESS: The case is EM-96-149. The --  
7 it is attachment 1 to the Stipulation and Agreement to  
8 that particular case.

9 And on page 48 of attachment 1 it lays out  
10 the following: For residential in the summer you will  
11 use the only rate that exists. In the winter for  
12 residential, you will use the initial block, the first  
13 block.

14 For small general service in the summer, you  
15 will use the all kilowatt hour block. In the winter,  
16 you will use the base use block.

17 For large general service in the summer, you  
18 will use the over 350 kilowatt hour per kW block. For  
19 large general service in the winter, you will use the  
20 over 350 kilowatt hour per kW block.

21 For small primary service in the summer and  
22 in the winter, you will use the over 350 kilowatt hour  
23 per kW block, and for large primary, you will simply  
24 use the summer rate and the winter rate. There are no  
25 blocks.

1 BY MR. BYRNE:

2 Q. And just for purposes of clarity of the  
3 record, the document you identified and you've just  
4 been reading from, that's the document that you used  
5 in developing the rates to apply to the weather  
6 normalization adjustments that we've been talking  
7 about; is that correct?

8 A. Yes.

9 Q. Okay. And let me ask you this: One of the  
10 things you read out of that document and, I guess, you  
11 did in this case is you used the first block for  
12 residential customers in the winter; is that true?

13 A. Yes.

14 Q. And it strikes me that I assume that is a  
15 blocked rate --

16 A. Yes.

17 Q. -- is that correct?

18 A. Yes.

19 Q. I mean, it strikes me that a lot of the  
20 residential customers would have usage in the winter  
21 that might put them in the -- in the -- not the  
22 initial block anymore. Is that a fair assumption, or  
23 am I not understanding things?

24 A. The method I used is a simplified method.  
25 Probably what would really happen is that you would

1 have usage changing in both blocks, and so what you  
2 would have is a -- what I call a blended rate that's  
3 actually the appropriate rate that you would use to  
4 price out these adjustments.

5 In other cases, I have done that. In this  
6 case, I chose to use something simple.

7 Q. And would the -- if you had calculated the  
8 blended amount, would that have produced a more  
9 accurate result?

10 A. It would produce a more precise result.

11 Q. Okay. And I guess the difference might be,  
12 would it be fair to say, residential customers who use  
13 a lot of electricity in the winter like maybe if they  
14 have electric heat rather than gas heat, or if they  
15 have a big, big house or a heated swimming pool or  
16 have relatively high electric use over the winter for  
17 whatever reason would be the ones that would fall --  
18 that would be using into the second block? Is that  
19 true?

20 A. That is correct.

21 Q. And then there would be other residential  
22 customers who maybe didn't, had a small house and  
23 didn't use as much, and they would still be in the  
24 first block during the winter?

25 A. Right. And in the same way, the -- what

1 I've read is for the large general service and the  
2 small primary service, which is kind of the mid-size  
3 to largish commercial industrial customers, this  
4 methodology priced them all out in the lowest block,  
5 and probably that -- that is underestimating the  
6 revenue effect.

7 Q. And, again, could you have gotten a more  
8 precise result if you would have calculated a blended  
9 rate for those customers?

10 A. Yes.

11 Q. Okay. And I guess the reason -- well, the  
12 advantage of doing it in the way that was stipulated  
13 in EM-96-149 is it's simpler to do that way; is that  
14 right?

15 A. It's -- it's -- I thought it was a  
16 reasonable method. It is easier, and I knew that my  
17 ultimate -- one of my ultimate goals in this case was  
18 to get billing units by block. And I knew if I did it  
19 this way, it would make that process a much easier  
20 process.

21 Q. Okay. Okay. Let me keep going on the  
22 columns on schedule 2, if I might.

23 MR. WILLIAMS: Schedule 2 or schedule 3?

24 MR. BYRNE: Schedule 2 and schedule 3, I  
25 guess. Really -- I'm sorry. You're right. Really,

1 it's schedule 3 that I'm on.

2 BY MR. BYRNE:

3 Q. And I think the next column in schedule 3 is  
4 "Normalization for 365 Days." Is that also -- the way  
5 you calculated that also shown on schedule 4-2?

6 A. Yes.

7 Q. And is that -- did you calculate it -- is  
8 that basically the same principle that we talked about  
9 for the weather adjustment?

10 A. Yes, except in this particular case we don't  
11 have monthly rates. We have one rate, and that's  
12 because the assumption is this is an unbilled  
13 adjustment that's essentially having to do with the  
14 end point of the test year.

15 Both of the end points are summer in this  
16 particular case because the test year starts in July  
17 and it ends in June. So rather than try to take the  
18 total that Ms. Mantle gave me and separate it out and  
19 put some of it at the beginning and some of it at the  
20 end, since they were all going to be priced the same  
21 anyway, I didn't bother to separate it out, because  
22 you get the same answer.

23 Q. And there is no -- is it true that you don't  
24 have the issue of blocked rates -- well, at least for  
25 residential service you don't have blocked rates in

1 the summer, do you?

2 A. You don't have for residential and you don't  
3 have for small general service. You still do have for  
4 the other three.

5 Q. Okay. And so for the other three, would our  
6 same discussion that we had before apply? In other  
7 words, did you use the conventions from schedule 1 in  
8 Case No. GM-- or EM-96-149 to figure out how to price  
9 that in terms of the blocked rates?

10 A. Yes.

11 Q. Okay. Okay. Then the next column on  
12 schedule 3 is the "Growth Adjustments."

13 And, again, the question is, how did you  
14 price those kilowatt hours?

15 A. That particular column is the work product  
16 of Mr. Doyle Gibbs of the Staff.

17 Q. Okay. So he calculated the dollar amounts  
18 as well?

19 A. Yes.

20 Q. Okay. Did you --

21 A. I add everything up though.

22 Q. Okay. I have no problem with how they were  
23 added.

24 Did you do any independent check of his work  
25 in calculating those revenues, or did you just take

1 the dollars from him?

2 A. Oh, I have independently calculated them. I  
3 guess you would say I've independently calculated them  
4 because as I was supplying him with the inputs to use,  
5 it sort of rolled out. So I do know that I have a  
6 method that would get his answer.

7 Q. The exact same answer?

8 A. Yes.

9 Q. Okay. And so it's -- you've checked it sort  
10 of for consistency with the theory of how you priced  
11 out these other elements?

12 A. Well, these -- no. The growth adjustments  
13 are priced out differently than weather or days. It's  
14 simply that the -- the inputs that Mr. Gibbs is using  
15 to calculate the revenues are coming from me, because,  
16 see, he's -- the way he's pricing is he's pricing the  
17 adjustment to sales based on the average revenue  
18 numbers that I am providing him, which is really this  
19 table up until you get to that column.

20 So since -- okay. I create this table up  
21 through the normalization to 365 days. I add it up.  
22 I say -- and that's what I give to Mr. Gibbs that he  
23 is using in his pricing of the growth.

24 Q. So does he -- in other words, you'll get a  
25 total revenue for each rate class up to the point of

1 the growth adjustments, and then -- and then does he  
2 divide that by the number of customers --

3 A. Yes.

4 Q. -- to come up with an average revenue per  
5 customer?

6 A. That's my understanding.

7 MR. WILLIAMS: Let him finish his question  
8 before you answer.

9 BY MR. BYRNE:

10 Q. And is that your understanding, after I  
11 finished the question?

12 A. That's my understanding.

13 Q. Okay. And -- and then he multiplies the  
14 number of customers that he's calculated for his  
15 growth adjustment by the average revenue per customer  
16 that you've calculated, and that's where he gets his  
17 dollar amounts for -- that are incorporated by you in  
18 schedule 3?

19 A. That's my understanding.

20 Q. Okay. And then you add that column, the  
21 Growth Adjustments column, and then you're able to  
22 complete schedule 3?

23 A. Correct.

24 Q. Okay. Let me ask you, my understanding --  
25 well, do you make any adjustment for revenues

1 Q. Okay. So when you're calculating rates for  
2 the Company, it's accounting schedule 9 that forms the  
3 basis for calculating the rates rather than this  
4 schedule?

5 A. When I'm actually calculating the rates --  
6 no. I would say that accounting schedule 9 which has  
7 operating revenues, which includes both other revenues  
8 and rate revenues, is used to calculate what the --  
9 what the overall overearnings are in the case.

10 But if you -- if you would kind of turn that  
11 around from what's the difference between current  
12 revenues and current costs and say, What's the total  
13 amount, what's the total cost to serve, which I would  
14 call the revenue requirement, but the accountants do  
15 not, that's really what I'm using to base the rates  
16 on, which is equivalent to saying, What is the  
17 adjustment to revenues plus the current revenues here  
18 by these pieces.

19 Q. Okay. So both are included in what you  
20 would call the revenue requirement?

21 A. Right.

22 Q. And that revenue requirement is what the  
23 rates are designed -- that you calculated designed to  
24 ultimately recover?

25 A. Yes.

1 Q. Okay. Did you assist Mr. Gibbs in his  
2 calculation of the territorial adjustment kilowatt  
3 hours or revenue?

4 A. No.

5 Q. Okay. Absent the existence of attachment 1  
6 in Case No. EM-96-149, how would you have calculated  
7 the rates for the weather adjustment?

8 A. Well, there's a number of ways one could do  
9 it. It's kind of speculation as to how I would have  
10 done it. I can tell you some of the -- some of the  
11 other methods that I think are reasonable and that I  
12 have used in other cases.

13 Q. Okay.

14 A. Okay. One -- one way you could do it is to  
15 use what's called an average realization, which is you  
16 simply look at the average -- the average price which  
17 is kind of the blending of the blocks that's in the  
18 existing data. You can do that.

19 Another way you can do it is you can model  
20 the relationship between use per customer and the  
21 average price.

22 A third way you can do it is what's called  
23 Ogive, O-g-i-v-e. And what that does is it -- it's  
24 another way to get a blended rate, but you're working  
25 off of bill frequency information.

1 I guess those would be the common ones.

2 Q. Would it be fair to say that those three  
3 common ways that you listed all some way or another  
4 account for the blending of rates in periods where  
5 some customers can be in different blocks?

6 A. Yes.

7 Q. Okay. On page 14 of your testimony, if you  
8 have it, you propose that UE create a monthly report,  
9 it looks like, starting on line 4 of page 14 of your  
10 Direct Testimony. Do you see that?

11 A. Yes.

12 Q. Has the Company been discussing the  
13 requirements of this report with you and providing you  
14 with draft copies to review?

15 A. Yes.

16 Q. Are you satisfied with the process, at least  
17 as it's going along so far? I realize it hasn't -- it  
18 hasn't reached an end yet, but are you satisfied with  
19 the cooperation that the Company is giving you toward  
20 developing that report?

21 A. I think the Company is making a good faith  
22 effort to -- to put together what I have proposed.

23 Q. Okay.

24 A. However, I haven't seen a version that I  
25 would say, Yeah, this looks good. That meets all of

1 my standards.

2 Q. Okay. Still a work in progress?

3 A. Yes.

4 Q. I talked to Mr. Watkins this morning about  
5 the -- the basis for his rate design recommendations  
6 in this case being the -- I guess the Stipulation or  
7 the goals in the Stipulation and Agreement in Case  
8 No. EO-96-15. Were you here for that -- those  
9 questions?

10 A. Yes.

11 Q. And I guess one thing I asked him that I  
12 would like to ask you, even though I suspect you may  
13 not be the right person and he is, but I want to ask  
14 you the same question just to make sure, is you didn't  
15 do any analysis of the data or information underlying  
16 the settlement in Case No. EO-96-15 as part of your  
17 work in this case, did you?

18 A. Yes, to a limited extent, because part of  
19 that rate design case that we never fully realized the  
20 objectives was on the large general service and small  
21 primary service, how to -- how to appropriately  
22 reflect voltages differences. And I needed to go back  
23 and look at that data and that analysis that we had  
24 done earlier to both reacquaint myself with what we  
25 had tried to do and use that analysis to try to figure

1 out why -- why we couldn't satisfy both of the  
2 objectives that we -- that the parties had set out.

3 Q. Okay. Other than that, did you do any  
4 analysis of the information from EO-96-15?

5 A. Well, just to the extent that my work papers  
6 pull in the results from -- from the analys-- or the  
7 results from the Stipulation to use as a basis for  
8 this.

9 Q. Okay.

10 A. Because, remember, what we're building on  
11 is that case, and one of the objectives that  
12 Mr. Watkins laid out was that the remainder of the  
13 first 25 million should go someplace, so I had to  
14 figure out, like, how much of it did we already -- how  
15 far did we get in that process.

16 So, yeah, I was going back to documents in  
17 that case.

18 Q. Okay. But would it be limited to what you  
19 just said, which is how far did we get in the process  
20 as opposed to updating the whole cost of service  
21 study, for example?

22 A. I did not do anything in cost of service.

23 Q. Okay. No analysis or updating of the cost  
24 of service study?

25 A. No.

1           Q.     Okay.  If you had a more up-to-date cost of  
2     service study than the one that's embodied in  
3     EO-96-15, if it were available and if it were  
4     acceptable to the Commission, would -- in your  
5     opinion, would it be better to use that more updated  
6     study to -- for rate design purposes in this case?

7           A.     I think that's a policy question.  And, in  
8     general, I'm not a policy person.  I'm an  
9     implementation person.  So I don't know that I can  
10    give you an answer to that.

11          Q.     Well --

12          A.     Somebody else will decide that.

13          Q.     That's true.

14          A.     Not me.

15          Q.     But, I mean, I guess I'm just asking.  All  
16    other things being equal -- and I understand policy  
17    considerations are one thing that never is equal, but  
18    all other things being equal, is it better to use a  
19    more up-to-date cost of service study than a less  
20    up-to-date cost of service study?

21          A.     If you assume the quality of the two studies  
22    is better, I would say that more recent is always  
23    better than old.

24          Q.     If you assume that the quality is the same,  
25    do you mean?

1           A.     Yes.   Yes.

2           Q.     Okay.  I have some quotes that I have to ask  
3     you if you agree or disagree with, and I asked  
4     Mr. Watkins this morning.  Perhaps you recall, so --  
5     and I have them written down on a piece of paper and  
6     you can look at them after I read them.

7                     And I guess for each one I just want to  
8     know, do you agree or disagree or not have an opinion  
9     on whether the quote is valid or true or appropriate.

10                    And the first quote is, "Test year is a  
11    starting point to set reasonable rates for the  
12    prospective period when rates are in effect."

13           A.     Test year is a -- is a historical period of  
14    time in which -- test year itself is just a calendar  
15    thing, but what it rep-- but the sales, the revenues,  
16    the costs are our starting point.

17                    So I think with that caveat, I would agree.

18           Q.     Okay.  The second statement I have is, "The  
19    purpose of a test year is to create or construct a  
20    reasonably expected level of earnings, expenses, and  
21    investment during the future period during which the  
22    rates to be determined will be in effect.  All of the  
23    aspects of the test year operations may be adjusted  
24    upward or downward (normalized) to exclude unusual or  
25    unreasonable items to arrive at a proper, allowable

1 level of all of the elements of the Company's  
2 operations."

3 A. "The purpose of the test year is to create  
4 or construct a reasonably expected level of earnings,  
5 expenses, and investment during the future period  
6 during which the rates to be determined will be in  
7 effect." I think that I agree with that.

8 "All of the aspects of the test year  
9 operations may be adjusted upward or downward  
10 (normalized) to exclude unusual or unreasonable items  
11 to arrive at a proper allowable level of all of the  
12 elements of the Company's operation."

13 This I have a problem with. I do know that  
14 we normalize things, but when you get into that whole  
15 issue that you raised with Mr. Watkins about what's  
16 the proper thing to do with nonrecurring expenses or  
17 unusual or abnormal, or whatever it is, I really have  
18 to plead ignorance on that. I mean --

19 Q. Okay.

20 A. I know a bunch about revenues and I know a  
21 bunch about rate design, but when it comes to the  
22 rate-making treatment of expenses, I'm hardly an  
23 expert.

24 Q. Okay. Fair enough.

25 Okay. The next one I have is, "Revenue

1 requirement is net operating income multiplied by the  
2 current tax multiplier."

3 A. Again, I'm not an expert, and I have no  
4 opinion on that particular thing --

5 Q. Okay.

6 A. -- except that to me revenue requirement --  
7 see, I don't know what net operating income is  
8 exactly. I thought it was revenues minus expenses.

9 So I think I disagree with this because  
10 revenue requirement -- but I'm confused with the jar--  
11 the accounting jargon here of net operating income.

12 What I believe is revenue requirement is the  
13 total amount of money that rates should collect from  
14 the customers --

15 Q. Okay.

16 A. -- which should equal the total allowable  
17 costs, including a return on rate base.

18 Q. Okay. The next one is, "Revenues, expenses,  
19 and rate base are the key components of the  
20 rate-making process, and each of these components must  
21 be measured consistently in time in relation to each  
22 other or the revenue requirement result will be skewed  
23 either to the utility's or its customers' detriment."

24 A. I think this is a situation where if you  
25 don't get into what exactly words mean, that I agree.

1           The measuring consistently in time in  
2   relationshi-- in relation to one another, what that  
3   means to me is the whole process of having a test  
4   year, that you're not pulling expenses from one time  
5   period to match against revenues from another time  
6   period to match against rate base for another time.

7           If we say "consistently in time" means they  
8   are all from the same test period or test year, then I  
9   agree with that.

10          But in terms of what "skewed" means, I don't  
11   know. If we imply from that that if you don't do  
12   that, you won't get a reasonable answer, then I agree.

13          Q.     Okay. Finally, the last one is, "The test  
14   year forms the basis for any adjustments necessary to  
15   remove abnormalities that may have occurred during the  
16   period and to appropriately reflect any ongoing  
17   increase or decrease shown in the financial records of  
18   the utility."

19          A.     I think in that one I want to say that I'm  
20   not an expert on what is shown in the financial  
21   records of the utility, and so I'm -- I have no  
22   opinion on that particular one.

23          MR. BYRNE: Okay. I don't have any further  
24   questions.

25          Thank you very much, Ms. Pyatte.

C E R T I F I C A T E

STATE OF MISSOURI    )  
                              )   ss.  
COUNTY OF COLE        )

I, KRISTAL R. MURPHY, CSR, RPR, CCR, with the firm of Associated Court Reporters, do hereby certify that pursuant to agreement, there came before me,

JANICE PYATTE,

at the Missouri Public Service Commission, Room 210, Governor State Office Building, in the City of Jefferson, County of Cole, State of Missouri, on the 18th day of April, 2002, who was first duly sworn to testify to the whole truth of her knowledge concerning the matter in controversy aforesaid; that she was examined and her examination was then and there written in machine shorthand by me and afterwards typed under my supervision, and is fully and correctly set forth in the foregoing 50 pages; and the witness and counsel waived presentment of this deposition to the witness, by me, and that the signature may be acknowledged by another notary public, and the deposition is now herewith returned.

I further certify that I am neither attorney or counsel for, nor related to, nor employed by, any of the parties to this action in which this deposition is taken; and further, that I am not a relative or employee of any attorney or counsel employed by the parties hereto, or financially interested in this action.

Given at my office in the City of Jefferson, State of Missouri, this 19th day of April, 2002.

KRISTAL R. MURPHY, CSR, RPR, CCR

COSTS: (Computation of court costs based on payment within 30 days.)

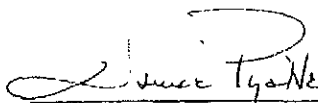

## ERRATA SHEET

Deposition of: Janice Pyatte

Case Caption: Case No. EC-2002-01

Date Taken: November 28, 2001

Page	Line	Correction	Reason
5	14	add 'the word' between 'switch' and 'calendar'; add 'the word' between 'and' and 'billing'; add 'in the statement.' to the end of the sentence	clarity
7	7	change 'Wes' to 'Wess'	mis-spelling
9	10	add comma between 'service' and 'rate'; add comma between 'design' and 'sales'	clarity
12	21	add 'dollars' at end of sentence	clarity
14	5-6	delete 'which I am at peace with Ms. Mantle on that'	mis-spoken and/or mis-transcribed
14	13	add 'to kWh sales' after the words 'weather adjustment'	clarity
15	22	delete 'essentially from'	clarity
20	20	change 'for going through a' to 'that was a substitute for the'	clarity
20	23	change 'our charge' to 'are charged'	mis-spoken and/or mis-transcribed
21	20	add 'a second EARP during' after 'have'	clarity

  
Signature

Direct Examination by Mr. Byrne 3

1 JANICE PYATTE, being first duly sworn, testified as follows:

2 DIRECT EXAMINATION BY MR. BYRNE:

3 Q. My name is Tom Byrne, and I'm an attorney for  
4 Union Electric Company, doing business as AmerenUE. and  
5 today we are here to take the deposition of Janice Pyatte of  
6 the Missouri Public Service Commission Staff in Missouri  
7 Public Service Commission Case No. EC-2002-01.

8 Present in the room in addition to myself and  
9 Ms. Pyatte and the court reporter are Denny Frey from the  
10 Staff's legal department and Lena Mantle, also from the  
11 Staff.

12 Could you please state your name.

13 A. My name is Janice Pyatte.

14 Q. Before we get started, I'd like to address  
15 some preliminary matters. First of all, have you ever been  
16 deposed before?

17 A. No.

18 Q. If you don't hear one of my questions or if  
19 you don't understand it, please feel free to ask me to  
20 repeat it or ask me to clarify it. Can you do that?

21 A. Yes.

22 Q. Okay. And a standard question we're supposed  
23 to ask everybody is are you taking any medication that might  
24 affect your ability to understand the questions or answer  
25 them today?

1 A. No.

2 Q. To the best of your knowledge, is there any  
3 other factor that might impair your ability to understand  
4 the questions or answer them?

5 A. No.

6 Q. Okay. Also, as I mentioned before we went on  
7 the record to Mr. Frey, if at any point you need to take a  
8 break or if the Staff wants to take a break, just say so and  
9 we can do that.

10 MR. FREY: Thank you.

11 BY MR. BYRNE:

12 Q. And I guess the only other preliminary thing  
13 is I'd like to define some terms just to make sure we're all  
14 understanding them the same way. If I say UE or AmerenUE,  
15 I'm talking about Union Electric Company. Is that okay with  
16 you?

17 A. Yes.

18 Q. And if I say Ameren, I'm talking about the  
19 parent Ameren corporation. Is that okay?

20 A. Yes.

21 Q. Okay. By whom are you employed, Ms. Pyatte?

22 A. The Missouri Public Service Commission.

23 Q. And in what capacity?

24 A. I am a regul-- regulatory economist III, like  
25 in Roman numeral three.

1 Q. And are you the same Janice Pyatte that filed  
2 direct testimony in Case No. EC-2002-01 on the subjects of  
3 sales and revenues and rate design which consists, I  
4 believe, of 29 pages and 8 schedules?

5 A. Yes, I am.

6 Q. Okay. Do you have a copy of your testimony  
7 with you?

8 A. Yes, I do.

9 Q. Okay. Good. Do you know of any changes that  
10 you need to make in your testimony?

11 A. Yes. I have one. And it is on page 12,  
12 line 11. And what -- it should read, Regulatory adjustments  
13 must be on a billing month rather than a calendar month  
14 basis. So the correction is to switch calendar and billing.

15 Q. Okay. Do you have any other corrections that  
16 you know of at this time?

17 A. No.

18 Q. Okay. And according to your testimony, you've  
19 been employed at the Commission since 1977; is that correct?

20 A. Yes.

21 Q. And did you hold any jobs related to the  
22 issues that you are testifying on in Case No. EC-2002-01  
23 prior to your employment with the Commission?

24 A. No.

25 Q. Okay. Could you briefly explain what

1 positions you've held at the Commission since you were hired  
2 and briefly what duties you performed in each position?

3 A. Since 1977, I have been an economist with  
4 various job titles. I have concentrated my work in the  
5 areas relating to electric utilities and relating to areas  
6 such as class cost of service, rate design, revenues,  
7 billing units, load research data, just the -- the whole  
8 general area.

9 Over the years, I have -- I guess I would have  
10 to say that the scope of what I do has broadened somewhat  
11 and the complexity of what I do has broadened somewhat, but  
12 the whole general area hasn't changed significantly.

13 Q. Have you focused on electric utilities pretty  
14 much all the time that you've been at the Commission?

15 A. Except for the first couple years I was  
16 here -- I think I did a Laclede Gas rate design, but  
17 essentially other than that, yes --

18 Q. Probably --

19 A. -- electric has been my focus.

20 Q. For probably 20 years --

21 A. Yeah.

22 Q. -- or so?

23 A. Yeah.

24 Q. Okay. Could you explain where your current  
25 position fits into the Commission's organizational chart?

1 And I guess the best way to do that is, like, who is your  
2 supervisor?

3 A. Okay. Dr. Michael S. Proctor is my  
4 supervisor -- has been my supervisor for most of the time  
5 I've been here. His -- the manager of the department which  
6 is now called the energy department above Mike is Warren  
7 Wood. Above Mr. Wood is the division director, Wes  
8 Henderson, the division being operation -- utility  
9 operations. Above Mr. Henderson is, I presume, the new  
10 executive director, Mr. Robert Quinn. And above Mr. Quinn,  
11 of course, are the five Commissioners.

12 Q. Okay. And how does your function, if at all,  
13 relate to the Commission's accounting function? Are you  
14 completely separate from that?

15 A. When -- when we do case-related activities,  
16 the -- the folks who are doing the activities tend to come  
17 from -- the technical folks tend to come from both the  
18 operations division, which I'm in, and the services  
19 division, which is a separate division, but that's the  
20 division that includes accounting and financial analysis.

21 We tend to -- the -- it's a team-like  
22 structure and we tend to coordinate. And there's two  
23 particular areas where there's a fair amount of overlap  
24 between the two divisions, and sales and revenue is one of  
25 those.

1                   So you will see in this particular case that  
2                   there is a fair amount of overlap between the work that I  
3                   have done on sales and revenue and the work that Mr. Doyle  
4                   Gibbs has done to come up with what we believe to be the  
5                   proper accounting for adjusted operating revenues.

6                   Q.       And so do you typically work pretty closely  
7                   with the accountants in any rate case that you're working on  
8                   or complaint case?

9                   A.       We must coordinate -- yeah, I personally must  
10                  coordinate with them.

11                  Q.       Okay. But in terms of a reporting  
12                  relationship, they're sort of on a separate branch of the  
13                  Commission --

14                  A.       Yes. .

15                  Q.       -- I guess; is that right?

16                  A.       Yes.

17                  Q.       And it would only -- the branch where you are  
18                  only comes together with the branch from the accounting  
19                  department I guess at the executive --

20                  A.       Yes.

21                  Q.       -- director level?

22                  Okay. About how many class cost of service  
23                  studies have you participated in, if you know?

24                  A.       What I would refer you to is in Staff's  
25                  response to Union Electric Company's first request for

1 documents. I submitted a document in answer to Question 22  
2 that lists all of the relevant testimony that I have filed  
3 on either issue relating -- that I filed on in this case.  
4 And if you want, I can -- I can count how many of those, but  
5 I would refer you to this document.

6 Q. Okay. I can look for an exact number, but it  
7 looks like there's two pages of cases. There are a lot of  
8 cases there, is that correct?

9 A. There is a lot of cases and -- relating to  
10 class cost of service rate design sales and revenues.

11 Q. Okay. And would most of those be electric  
12 utility cases?

13 A. Yes.

14 Q. Okay. Let me ask you this. What's the  
15 difference between class cost of service and rate design?

16 A. In my mind, the difference is class cost of  
17 service is concerned with attributing costs to classes of  
18 customers. And, as a result, a class cost of service study  
19 will tell you whether or not you think that a specific class  
20 of customers are over- or under-collecting the revenues --  
21 whether or not their revenues are over-or under-collecting  
22 what the study would say their costs are.

23 So it's kind of like a revenue requirement for  
24 specific classes, but it's a revenue question. In -- in my  
25 terminology, rate design is concerned with the actual rates

1 and the structure of those rates that individual customers  
2 will be charged.

3 And in the case of electric utilities, you  
4 have fairly complicated structures that consist of customer  
5 charges, demand charges, reactive charges, energy charges,  
6 there's a myriad of different details that go into deciding  
7 what's the proper way to design the rates to track the costs  
8 that have been allocated to the class, but rates are  
9 concerned with individual customers, not classes of  
10 customers.

11 Q. Okay. And, I guess, the different rates that  
12 you're talking about, a single class of customers might be  
13 subject to any number of different rates like a customer  
14 charge and a demand charge?

15 A. There's various rate components, yes. And, in  
16 fact, the larger the customer, the more sophisticated the  
17 meter, the more complicated the rate structure tends to be.

18 Q. Is it more complicated with electric utilities  
19 than other utilities, in your experience?

20 A. Oh, considerably.

21 Q. Okay. I guess I would like to ask you some  
22 general questions about the purposes of regulation of public  
23 utilities that don't specifically deal with your testimony.

24 First of all, I'd like to ask you would you  
25 agree with me that one of the key principles of public

1 utility regulation is that public utilities should have the  
2 opportunity to earn a fair rate of return?

3 A. That's correct.

4 Q. And would you agree with me that the  
5 opportunity to earn a fair rate of return is affected not  
6 only by the rate of return that's explicitly allowed by the  
7 Commission, but also by the costs that are allowed to be  
8 reflected in rates?

9 A. Oh, clearly.

10 Q. Okay. In other words, if a utility had costs  
11 of say, \$500 million, but it was only permitted to recover  
12 \$100 million of those costs, that would impact its ability  
13 to earn its authorized rate of return?

14 A. That would impact its ability. I guess the  
15 premise -- I have difficulty with the premise, because the  
16 implication there is that the Commission didn't -- didn't  
17 account for all of the relevant costs if they made a  
18 decision. And I have no reason to believe that that's  
19 necessarily the case one way or the other.

20 Q. Sure.

21 A. I mean, clearly that's their obligation to do  
22 that.

23 Q. Yeah. And I guess --

24 A. And to the extent I don't know all of what  
25 they know, if indeed they came out with a decision that had

1       that kind of an impact, I guess I'd be -- I guess I'm not  
2       certain in that situation how to evaluate that.

3               Q.       Yeah. And I guess my question is, assuming  
4       the Commission didn't do what it was supposed to do, that it  
5       didn't permit the recovery of, you know, reasonable level of  
6       costs and there's no -- you know, I'm not giving any facts  
7       but I'm just saying if they didn't allow the recovery of  
8       reasonable costs, that would adversely impact the utility's  
9       ability to earn its authorized rate of return; isn't that  
10      true?

11             A.       That would adversely impact it. And if the  
12      Commission doesn't do their job, my presumption is the  
13      company would appeal the Commission's decision and get it  
14      settled. I -- I try not to second-guess the Commission.

15             Q.       I understand.

16             A.       That's your job.

17             Q.       Okay. Looking at this case specifically, do  
18      you know what the Staff's overall proposal is?

19             A.       The Staff's overall proposal is for a  
20      reduction in overall revenues in the range of -- let me look  
21      it up -- 213.7 million and 250 million.

22             Q.       Okay. I guess, would it be fair to say that  
23      your portion of the case is not a component of those revenue  
24      requirement numbers, yours is instead how the revenue  
25      reduction is to be allocated to different classes and

1 different rate components?

2 A. My rate design testimony relates to what you  
3 just said; however, my revenue testimony is directly related  
4 because what I have done in the issue of sales and revenues  
5 is to provide adjustments to the company's revenues.

6 And as you're aware, the revenue requirement,  
7 as they call it -- as the accountants call it, is the  
8 difference between what they think is an allowable cost and  
9 current revenues. So to the extent that I have made  
10 adjustments to revenues, I have added a dollar for dollar --  
11 virtually a dollar for dollar impact on the bottom line.

12 Q. Okay. Can you tell me what piece of the  
13 Staff's overall recommendation is attributable to those  
14 adjustments that you just talked about?

15 A. Okay. I would refer you to my testimony in  
16 this case, Schedule -- Schedules 2-1 and 2-2. On those  
17 schedules, what you will see is you will see columns  
18 entitled annualization adjustments and normalization  
19 adjustments. I'm responsible for the numbers in those two  
20 columns.

21 One of those columns, the annualization, is  
22 \$10.4 million negative and the normalization column the  
23 adjustment is \$23 million negative. So roughly I'm  
24 responsible for \$33.4 million in adjustments to revenue that  
25 are directly affected by the -- in the Staff's calculation

1 of UE's excess earnings.

2 I would point out that since those adjustments  
3 are negative, what that means is that if I would not have  
4 done adjustments to revenues related to annualization and  
5 related to revenue normalization due to weather, which I'm  
6 at peace with Ms. Mantle on that, the over-earnings of the  
7 company would have been \$33.4 million greater than is shown  
8 on the Staff's EMS run.

9 Q. Okay. And you mention Ms. Mantle. And my  
10 understanding is she provided the basis for the weather  
11 adjustment that you made; is that correct?

12 A. That's right. Ms. Mantle calculated the  
13 weather adjustment. I calculated the adjustment to revenues  
14 that corresponded to those adjusted sales.

15 Q. Okay. So you took the information that she  
16 supplied you and converted it to an impact on revenues.  
17 Would that be a fair?

18 A. That's correct.

19 Q. Okay.

20 A. So to the extent that there's \$23 million  
21 negative adjustment to revenues from normalization, the fact  
22 that that's negative is because Ms. Mantle's analysis of the  
23 effects of weather would indicate that the company's  
24 revenues were higher than they normally would have been  
25 given the test year that was chosen.

1 Q. And, in general, is the same -- is there the  
2 same type of relationship with Staff Witness Doyle Gibbs on  
3 the growth adjustment?

4 A. There's a similar relationship between us.  
5 Mr. Gibbs' numbers are shown in Schedule 2-1 that we were  
6 looking at in the column entitled growth adjustments. And  
7 the way he does growth adjustments in-- requires inputs on  
8 use per customer from Ms. Mantle and on normal revenue per  
9 customer from myself.

10 Q. But similar to the weather adjustment, does he  
11 give you some information on growth and then you convert it  
12 to --

13 A. No.

14 Q. -- a revenue impact?

15 A. No.

16 Q. No?

17 A. No.

18 Q. Okay. Tell me what he gives you and what you  
19 do with it, if you don't mind.

20 A. Oh, he just gives me the completed numbers  
21 because what -- I mean, the way he does growth is he  
22 calculates essentially from on a monthly basis how many  
23 additional customers have been added from what was there on  
24 that month to the end of the update period.

25 And then assuming that each of those new

1 customers is typical in the sense that they have the same  
2 characteristics as the average existing customer, what he  
3 does is he takes his additional customers, multiplies them  
4 by Ms. Mantle's use per customer -- normalized use per  
5 customer which tells him what additional sales there will  
6 be. He multiplies them by my normal revenue per customer.  
7 That tells him what the revenues will be. And those are his  
8 numbers.

9 Q. And then he just gives you the revenues?

10 A. And then he just gives me -- and for -- for  
11 convenience, I simply present one summary table that -- that  
12 shows all the pieces, because the EMS run is not good at  
13 showing the pieces.

14 Q. Okay. So it's just more for convenience that  
15 you're showing the growth --

16 A. Yes.

17 Q. -- adjustment --

18 A. Yes.

19 Q. -- as opposed to you having done anything on  
20 it?

21 A. Yes.

22 Q. Okay.

23 A. Well, in this particular case, I mean, as is  
24 true in many cases, the -- Mr. Gibbs and I have  
25 independently done -- checked the numbers to see that we get

1 the same answer.

2 Q. Okay. Do you know if the Staff's overall  
3 proposal in this case is adopted by the Commission, what  
4 impact it will have on AmerenUE?

5 A. I know that the -- that if the Commission  
6 adopts the Staff's recommendation, that AmerenUE's revenues  
7 should be -- AmerenUE will file new tariff sheets which will  
8 have the effect on an expected value basis of collecting 230  
9 to 250 million dollars less than they currently do.

10 Q. Do you know what impact that would have on  
11 AmerenUE's ability to invest in infrastructure?

12 A. No.

13 Q. Do you know what impact that would have on  
14 AmerenUE's ability to provide adequate security for its  
15 facilities?

16 A. No.

17 Q. Do you know what impact it would have on the  
18 company's stock price?

19 A. No. However, I would assume that many of the  
20 issues you're bringing up will have been considered by the  
21 analysts who are looking at those particular areas. So, for  
22 example, I would presume that the -- Mr. Bible, who is the  
23 Staff's expert on all that financial analysis stuff,  
24 would -- would have indeed looked at things like stock  
25 prices in his analysis.

1 Q. Do you know what impact the Staff's proposal,  
2 if adopted by the Commission, would have on AmerenUE's  
3 ability to pay a dividend to its shareholders?

4 A. No. Again, I would -- I would defer to  
5 Mr. Bible.

6 Q. Do you know what impact it would have on  
7 AmerenUE's ability to attract capital?

8 A. Again, same -- same answer --

9 Q. Okay.

10 A. -- defer to Mr. Bible.

11 Q. And I take it from your answers you didn't  
12 consider any of this in drafting your testimony. Would that  
13 be fair to say?

14 A. That's true.

15 Q. Okay. In your opinion, would it be a good  
16 thing -- well, or would it be a bad thing, let me put it  
17 that way.

18 Would it be a bad thing if the Commission took  
19 an action that significantly impaired AmerenUE's ability to  
20 invest in infrastructure?

21 A. Presumably, the Commission would look at  
22 all -- all of the factors and make that decision. That's  
23 what they're paid to do. And, presumably, the company would  
24 raise the issue and it would be considered and -- because  
25 one of the things about this process is the Commission's

1 supposed to consider all relevant factors. So presumably  
2 these factors would have been considered if you're talking  
3 about in the context of a litigated case before the  
4 Commission.

5 Q. I guess would it be fair to say it's not your  
6 role to consider those issues but rather its the  
7 Commission's role?

8 A. That -- I like that characterization.

9 Q. Okay. Okay. Similar kind of question. Are  
10 you familiar with the recent large number of utility mergers  
11 in the United States in recent years, just in a general  
12 sense?

13 A. In a general sense, yes.

14 Q. Do you know whether Staff's proposal, if it  
15 was adopted by the Commission, would make AmerenUE a more  
16 likely target for takeover by an out-of-state --

17 A. No.

18 Q. -- purchaser?

19 I'm sorry. Can you say the answer again?

20 A. Oh, no.

21 Q. Okay. Did you consider that issue when you  
22 wrote your testimony?

23 A. No.

24 Q. Okay. And, again, I assume your answer would  
25 be the same as before, in that that's really an issue for

1 the Commission to consider rather than for you to consider?

2 A. Yes.

3 Q. Are you generally familiar with the  
4 alternative regulation plan that AmerenUE had in effect  
5 until just recently, known as the EARP?

6 A. In general, yes.

7 Q. Do you know how long that plan was in effect?

8 A. Well, there was really two plans, but they  
9 totaled six years.

10 Q. Okay. And they were similar, I assume?

11 A. They were similar in many -- in most aspects.

12 Q. Okay. Do you know, in general, what the terms  
13 of the EARP were?

14 A. In general, I know.

15 Q. In general, what were they?

16 A. Well, in general, the idea was that this was  
17 an experimental alternative regulation plan that would  
18 substitute tradition -- well, it would substitute -- I would  
19 characterize it as profit-sharing between ratepayers and  
20 shareholders for going through a traditional rate case  
21 process. And one of the characteristics of that kind of a  
22 plan is the permanent rates that the company has on file and  
23 that our charge customers won't change.

24 So under -- to clarify, under traditional  
25 regulation what happens is from time to time you have

1 adjustments in the permanent rates that the cus-- the  
2 company will charge its customers. Under the EARP, what you  
3 had was the permanent rates, in general, didn't change, but  
4 there would be a sharing mechanism that would allow  
5 customers to get a -- what's called a sharing credit on  
6 their bill once a year for their proportion of whatever the  
7 profit-sharing numbers came -- how they came out.

8 Q. Okay. And my understanding, correct me if I'm  
9 wrong, was there was a grid and at different rates of return  
10 there were different sharing percentages for the company and  
11 the customers; is that correct?

12 A. Yes.

13 Q. Okay. And do you know if rates for AmerenUE's  
14 customers increased or decreased during the six years that  
15 the plan was in effect?

16 A. There was one overall decrease. It came as a  
17 result of Case No. EO-96-15 and Case No. EO-96-14. But, in  
18 general, what the idea was or how it was that the -- you had  
19 three years of the first EARP, there was an intent to rebase  
20 the permanent rates and then you'd have the next three  
21 years. And that the rebasing of the rates -- the amount of  
22 the reduction would be based on roughly kind of the results  
23 of the first three years.

24 Q. Okay. And the cases you referred to were the  
25 vehicles in which the rebasing and the permanent rates

1 occurred; is that right?

2 A. That's right. And the -- the rates overall  
3 went down by, I believe, about \$16 million.

4 Q. In that rebasing?

5 A. In the rebasing.

6 Q. And if you were to count the credits that  
7 customers received under the plan in the rates, would it be  
8 fair to say that the rates went down even more than that  
9 over the period of the plan?

10 A. By my calculation, there was \$195 million  
11 worth of credits that were shared -- or that was the -- the  
12 ratepayers share, i.e., the credits that went to the  
13 ratepayers and -- over that time period as well as the  
14 permanent reduction that I referred to. Actually, there was  
15 two permanent reductions. I'm sorry. There was one at the  
16 very beginning.

17 Q. Okay. So at least if you compare the rates  
18 that prevailed over the course of the six years to the rates  
19 that were in effect before the EARP started, would it be  
20 fair to say there were pretty consistent reductions in  
21 rates, if you count the credits?

22 A. Yes.

23 Q. And pretty substantial? Would it be fair to  
24 characterize them as pretty substantial reductions in rates  
25 over that period?

1           A.       Well, I would say they were reductions. I  
2       don't know what your standard for substantial is. It was  
3       certainly in the single digits.

4           Q.       And I'm sorry. What do you mean "in the  
5       single digits"?

6           A.       Well, if you compared like what -- overall  
7       what percentage reduction it was, I mean, I haven't  
8       calculated it, but I would say it was -- it was some number  
9       less than 10 percent.

10          Q.       Okay.

11          A.       That's what I meant by that.

12          Q.       Okay. Let me ask you this. In your opinion,  
13       did AmerenUE have excess earnings over the period when the  
14       EARP was in effect?

15          A.       I have difficulty answering that question  
16       because I'm not sure what the standard is. During the  
17       period the EARP was in effect, we had -- we had a -- a  
18       contractual -- we had a contract that specified how we were  
19       going to share profits. Excess earnings, to me, is a  
20       question based on a different framework that -- other than  
21       the one we had.

22          Q.       Fair enough. Do you believe it's appropriate  
23       for the Commission to take into account in this case any  
24       earnings AmerenUE -- well, any earnings AmerenUE may have  
25       had during the period of the EARP in deciding this case?

1           A.       I think that the EARP and traditional  
2 regulation are kind of separate in that in this particular  
3 case what the Commission should be looking at is -- I mean,  
4 the whole framework is not to look back, but I say that  
5 knowing that what we use as a historical test year type  
6 model and I know that because of the effect of the calendar,  
7 we are using a test year, a historical period that happens  
8 to be in the EARP period.

9                   And so it might look like we're looking back,  
10 but I don't think that's the intent. And I think also that  
11 the company's proposal for this case is to use a different  
12 test year, but also a test year that was -- that's within  
13 the EARP period. So I think that it would suffer from the  
14 same defect, if that's what you want to call that.

15           Q.       Let me ask you this. Aside from everyone's  
16 need to use a test year in calculating rates, aside from  
17 that, should the Commission consider earnings that AmerenUE  
18 had during its EARP plan in setting rates in this case?

19           A.       My -- my personal opinion is -- is that this  
20 should not be retroactive, that the EARP covered those time  
21 periods and we shouldn't be going back and second-guessing.

22           Q.       Okay. So that's a no, I guess?

23           A.       Yes. Right.

24           Q.       Okay. Okay. Looking at your testimony, you  
25 may have already explained this, but just briefly, can you

1 tell me the two areas that you're covering in your  
2 testimony?

3 A. Sales and revenue, which has to -- has to do  
4 with -- with the overall revenue requirement that the --  
5 that the Staff comes out with in its EMS run and rate  
6 design, which is -- has to do with what the rates should  
7 look like if the Commission were to decide that the Staff's  
8 proposal on revenue requirement would be adopted.

9 Q. Okay. And who specifically asked you to  
10 provide testimony in this case? How did that happen?

11 A. My supervisor, Dr. Proctor, was the person who  
12 was responsible for assigning myself and Mr. James Watkins,  
13 the other rate design witness, to write testimony and to  
14 pursue the propose -- the rate design proposal that we did  
15 pursue.

16 Q. Did anyone provide you with advice or guidance  
17 before you did your analysis and before you wrote your  
18 testimony about what the results should be or about what  
19 should be included in your testimony?

20 A. I would refer you to the Staff's responses to  
21 Union Electric's first set of interrogatories. And question  
22 number -- Question Nos. 34, 35 and 36, which has to do with  
23 who -- who specifically participated for the issue of rate  
24 design.

25 I have that the participants were Dr. Proctor

1 and Mr. Watkins. And in terms of what they did, my answer  
2 was Dr. Proctor determined Staff's rate design approach,  
3 made staffing assignments for analysis and testimony,  
4 provided oversight.

5 Mr. Watkins was responsible for the  
6 methodology used to incorporate the Stipulation and  
7 Agreement in Case EO-96-15 into this case. And he and I  
8 collabora-- collaboratively developed how one would apply  
9 that. And Mr. Watkins also edited my testimony.

10 Q. Okay. And I guess what I'm trying to ask  
11 about here is at the outset and from what you read out of  
12 those answers to your interrogatories -- to the  
13 interrogatories, it seemed like maybe Dr. Proctor  
14 established an overall approach ahead of time and then the  
15 other interactions were during the course of doing your  
16 analysis and developing your testimony. Would that be true?

17 A. Yes.

18 Q. Okay. And I'd like to ask you, if I could --  
19 well, did you talk to anybody else ahead of time to set up  
20 the framework for your testimony besides Dr. Proctor?

21 A. For rate design just Dr. Proctor and  
22 Mr. Watkins.

23 Q. Okay. You didn't talk to Wes Henderson or Bob  
24 Schallenberg or any of those people ahead of drafting your  
25 testimony?

1 A. No.

2 Q. Okay. And nor would you typically, I guess?

3 A. You don't understand how low in the

4 organization I am, Mr. Byrne.

5 Q. I've been there myself, so -- okay.

6 Let's see. And I guess I'd like to ask you a

7 little bit -- to explain in a little bit more detail, if you

8 can, what's the difference between your role in the rate

9 design of this case and James Watkins?

10 A. Mr. Watkins' testimony lays out, I would say,

11 in words what the Staff's proposal is. My role was to take

12 those words and develop the numbers that went into them to

13 the point where I could say these are roughly the rates that

14 would result certainly and these are the revenues -- the

15 class revenues that would result from Staff's proposal.

16 And I think I even provided information to the

17 Commission on some general notion of what the impacts would

18 be to customers if they were to adopt such a proposal.

19 Q. Okay. So I guess would it be fair to say that

20 if I have questions about how -- you know, about the Staff's

21 decision to implement that rate design approach, they might

22 be better addressed to Mr. Watkins, and if I have questions

23 about how it was implemented, that would be more your area.

24 Would that be fair to say?

25 A. I think that's a reasonable thing to say.

1       Actually, although I don't believe that Dr. Proctor is a  
2       witness, if you really wanted to find out why he decided  
3       the -- that this was the appropriate approach, he's really  
4       the person.

5               Q.       Okay. But of the --

6               A.       Yeah.

7               Q.       But since he's not a witness --

8               A.       Yes.

9               Q.       -- of the witnesses --

10              A.       But of the witnesses, if you want to know  
11       the -- the principles and the theory behind it, I would say  
12       talk to Mr. Watkins. If you want to know how we decided to  
13       incorporate those principles and do all the calculations  
14       that would be required to eventually develop rates, I'm your  
15       gal.

16              Q.       Okay. Great. Okay. On page 4, line 10 of  
17       your testimony, you are talking about the growth -- customer  
18       growth as a major category of adjustments -- well, I guess  
19       it's really on lines 12 and 13. Do you see that?

20              A.       Yes.

21              Q.       And do you know what the dollar amount of the  
22       customer growth adjustment is?

23              A.       Yes, I do. It's -- it is shown on my Schedule  
24       2-1. It is the second to the last column. The value of the  
25       growth adjustments is 24,630,000 -- I'm sorry -- 653,575

1 dollars.

2 Q. Okay.

3 A. Positive.

4 Q. And is there also a kilowatt hour amount  
5 that's associated with that adjustment?

6 A. Yes, there is. That would be shown on  
7 Schedule 1-1, same place on the table. And it's 342,55,303  
8 kilowatt hours.

9 Q. Okay. And I think you said before that you  
10 got -- the information was developed by Staff Witness Doyle  
11 Gibbs; is that right?

12 A. That's correct.

13 Q. Okay. And do you know was a customer growth  
14 adjustment calculated for each of the company's customer  
15 classes separately?

16 A. Yes. For -- if -- if you look at Schedule  
17 1-1, you will see the specific classes that got growth. And  
18 for those that were -- for which growth adjustments were  
19 done, they were done separately by class and within each  
20 class they were done monthly.

21 Q. Okay. And are the dollars broken out by class  
22 on Schedule 2.1 in the same column?

23 A. Yes.

24 Q. You touched on this earlier in the deposition,  
25 but I guess I -- what is your understanding of exactly what

1 Mr. Gibbs did? I mean, my understanding is he calculated an  
2 average for each month for each customer class; is that  
3 right?

4 A. What he does -- and let's consider one -- one  
5 class. For each of the 12 months, what he does is first he  
6 calculates the difference between the customers at the end  
7 of the update period, which I believe was December of 2000,  
8 and the customers that existed in that particular month of  
9 the test year. Okay. That will give you the additional  
10 customers for that month. Then what he --

11 Q. And let me stop you for a second. When he  
12 gets the customers for December of 2000, the end of the test  
13 year or any other month, how does he do that? Doesn't he  
14 take, like, the beginning and the ending balance? Can you  
15 explain that?

16 A. Yeah. Okay. What he does is he calculates  
17 what accountants call mid-month customers, but what I  
18 believe to be a proxy for bill counts. Bill counts being  
19 what I would call the number of full customer charges that  
20 were charged.

21 Okay. The intent is that within the month you  
22 somehow get the average to deal with the fact that you have  
23 partial month bills essentially. So what he's really --  
24 really comparing is his mid-month customers to the customers  
25 at the end of the update period.

1 And what he's doing -- in a single process,  
2 but conceptually what he's doing is he is calculating the  
3 additional sales and revenues for the test year as if  
4 everybody at the end of the test year was there all year  
5 long.

6 And then he's doing this other calculation  
7 which is what -- which has to do with the additional sales  
8 and revenues by assuming that all the customer -- by  
9 assuming that all the customers at the end of the update  
10 period were there from the end of the test year to the end  
11 of the update period.

12 But he's rolling it together in one -- one  
13 particular calculation, but conceptually that's what he's  
14 doing. And so computationally, what he has in any given  
15 month is he takes here's the customers at the end of the  
16 update period, which I believe was December. Here's the  
17 mid-month customers at the month in question.

18 Q. But how does he -- how does he get those  
19 mid-month customers? What's the calculation for mid-month  
20 customers?

21 A. All he does is he takes the -- the customer  
22 numbers of the month in question, plus the customer number  
23 of the prior month and averages them. He simply adds the  
24 two and divides by two.

25 Q. Okay. And so if he was looking for the

1 mid-month customers for June of 2000, let's say --

2 A. Uh-huh.

3 Q. -- he would take the customers at the end of  
4 June of 2000; is that right?

5 A. He would -- he would take the customer count  
6 that the company has in its June -- for the June month and  
7 he would add the customers that the company said for May and  
8 divide that number by two.

9 Q. Okay. And then that would be the mid-month  
10 June customers?

11 A. That's what he calls the mid-month June  
12 customers.

13 Q. Okay. And does he do the same thing for the  
14 end of the update period or does he --

15 A. No.

16 Q. -- just take the number?

17 A. He just takes the number.

18 Q. So he would take the company's December --

19 A. Right.

20 Q. -- 2000 number?

21 A. I would refer to Mr. Gibbs on the exact theory  
22 on why one is mid-month and one is -- I don't want to say  
23 end of the month, because I -- I'm not convinced that I  
24 believe that that's what that number represents, but he  
25 would be a better witness on that probably than I. I know

1 the calculations because I've done the calculations, but  
2 I've never testified nor have I developed the methodology  
3 that --

4 Q. Okay.

5 A. -- is used.

6 Q. But, in general -- and I appreciate that. I  
7 won't ask you why he does that, but mechanically, what he  
8 does then is he takes that December customer number and --  
9 December 2000, end of the update period, and then he goes  
10 back and compares that for each customer class to the  
11 mid-month customer counts for each month in the test period,  
12 I guess?

13 A. Yes.

14 Q. And then he adjusts the number of customers in  
15 each of those months to be the same as the number of  
16 customers at December; is that true?

17 A. Yes. What he's -- what he's computing is  
18 the -- I would call it the number of additional customers in  
19 each month of the test year, okay, by the process that you  
20 just described. Then what he's doing is he's saying, okay,  
21 now that I know what my additional customers are, how do I  
22 know the sales and revenues that those represent?

23 And that's where Ms. Mantle's computation of  
24 normalized use for customer for that month for that class is  
25 used by Mr. Gibbs to calculate the -- the total additional

1 kilowatt hour sales, and where he uses that information that  
2 I provide him that for the test year for that month for that  
3 class that typical -- the typical customer used --  
4 contributed X dollars per customer on a normalized basis.

5 Q. Okay. And I assume from your discussion there  
6 both in calculating the kilowatt hours and dollars  
7 attributable to these growth numbers that you put in for  
8 each month in the test year, you're using normalized  
9 averages, I guess, for want of a better word, for each  
10 customer class; is that true?

11 A. Yes.

12 Q. Okay. And let me ask you this. When you talk  
13 about the growth that's occurred between the various months  
14 of the test year and the end of the update period, December  
15 of 2000 in this case, you're talking about net growth,  
16 aren't you? In other words, don't some customers go off the  
17 system and others come on the system?

18 A. That's correct. And if you look at the -- at  
19 Mr. Doyle's work papers, I suspect that what you will see is  
20 there are months where the growth in sales and growth in  
21 revenues are negative.

22 Q. Okay.

23 A. But what he shows for the class is the  
24 aggregation of all the months, positive and negative.

25 Q. Do you know if Mr. Gibbs or the Staff

1 considered whether there might be any difference in sales to  
2 new customers coming on to the system versus old customers  
3 going off of the system?

4 A. My understanding of Mr. Gibbs' computation is  
5 that was not considered. That the underlying assumption is  
6 that new customers -- customers coming on are like the  
7 average or the typical of all the customers on the system.  
8 So -- and I would point out that all the customers that are  
9 currently on the system also would include customers who are  
10 coming on and going off throughout the test year.

11 Q. Sure.

12 A. So they are kind of -- you know, I guess  
13 that -- well -- well, let's leave it at that. I suspect  
14 that the underlying assumption there really could be  
15 described as the new customers coming on are typical of all  
16 the existing customers and the existing customers include  
17 during the test year customers going on, customers going  
18 off.

19 Q. Okay. Let me ask you this. Is it possible  
20 that new customers coming on might have different usage  
21 characteristics than the typical customer? And I guess  
22 specifically what I'm thinking of is a new customer coming  
23 on might be more likely to be a new house, the new house  
24 might have more efficient air conditioning units than the  
25 typical customer has, the new house might have better

1 insulation, there just might be more efficiency for a new  
2 customer's house than an old customer leaving the system.  
3 Is that possible?

4 A. That's possible.

5 Q. Okay. But you didn't really consider that --

6 A. No.

7 Q. -- or Mr. Gibbs didn't consider that --

8 A. No.

9 Q. -- when he did his testimony?

10 Okay. Okay. Have you been involved in -  
11 dealing with customer growth adjustments in any other of  
12 AmerenUE's cases?

13 A. I don't believe so. AmerenUE has so few  
14 cases -- now, I have been in other utilities in the -- to  
15 the same extent that I am here --

16 Q. Okay.

17 A. -- which is I'm providing inputs and  
18 summarizing results.

19 Q. Have there been pretty many other cases that  
20 you've been involved in growth adjustment in that respect?

21 A. Over the last five years, I'd say there's a  
22 handful.

23 Q. And I guess over -- if you want went back in  
24 your whole career --

25 A. No, no.

1 Q. -- there's probably --

2 A. I would say that prior to the last five years  
3 I mainly was working in rate design cases under an EO  
4 framework. And customer growth is not generally a part of  
5 that framework.

6 Q. Okay. Let me ask you this. To your  
7 knowledge, based on your experience, has the staff ever  
8 calculated a growth adjustment in any electric rate case or  
9 complaint case in the manner that Mr. Gibbs calculated it in  
10 this case?

11 A. Well, that -- I think that's an answer  
12 probably for Mr. Gibbs. I can tell you that the Empire  
13 District rate Case ER-2001-299, which we just completed,  
14 used something very similar. The -- I guess it's okay to  
15 say this. The Missouri Public Service UtiliCorp case that  
16 we're just about to file uses this methodology. I think a  
17 couple -- I think a prior Empire case used it. But -- but  
18 it is -- I am not under the impression that this is a -- a  
19 methodology that was used and designed specifically for UE  
20 or for this particular case.

21 Q. Okay. Might it be a relatively new method of  
22 calculating the growth adjustment for Staff, or is it  
23 something that you think has been used for years and years?

24 A. My hunch is that this is probably pretty old  
25 and it's been used for a long time.

1 Q. But talk to Mr. Gibbs about that?

2 A. But talk to Mr. Gibbs.

3 Q. Okay. Let me ask you this. Would you agree

4 that if revenues associated with customer growth are

5 included in the rate calculation in this case, the

6 associated expenses should also be included in the company's

7 cost of service?

8 A. Yes.

9 Q. And I think in your testimony you maybe refer

10 to that as the matching principle?

11 A. Yes.

12 Q. Okay. Has the Staff included costs associated

13 with growth in this case?

14 A. I assume so.

15 Q. Okay.

16 A. This is an area where I don't directly deal

17 with the cost, but that -- that matching of expenses and

18 revenues is a fundamental and a principle that the Staff

19 never knowingly violates that I'm aware of. So I would have

20 to presume that the -- the particular witnesses who -- who

21 dealt with the particular position have taken that into

22 account.

23 Q. I guess the reason I'm asking you about it is

24 on page 4 of your testimony on about line 5 it says, Most of

25 the adjustments to test year revenues correspond to

1 adjustments to kilowatt hour sales that also affect the  
2 company's fuel and purchase power costs. The matching  
3 principle, and matching principle is in quotes, dictates  
4 that any change to revenues from historical levels that  
5 results from changes in underlying kilowatt hour sales must  
6 be associated with changes to fuel and purchase power costs  
7 that reflect that same adjustment to sales.

8 So I take it from that quote that it would be  
9 your opinion that at least fuel and purchase power costs  
10 should be adjusted to reflect these growth numbers?

11 A. Yes. And one of the work products that's  
12 shown here is kilowatt hour sales. And those are -- those  
13 are provided to Ms. Mantle for -- and -- let me back up.  
14 The sales that I have -- that I am testifying to include the  
15 sales associated with growth. Okay? Those sales are  
16 provided to Ms. Mantle to place under the net system load  
17 that then goes into the production costing model that  
18 eventually results in fuel and purchase power expense.

19 Q. Okay. So to the ex-- so what you're saying is  
20 you provide sales that include the growth adjustment to  
21 Ms. Mantle and then she, in turn, provides it to I think  
22 it's Mr. Bender maybe is the witness?

23 A. Uh-huh.

24 Q. And then he uses those sales in his production  
25 cost model and through that mechanism, the changes in fuel

1 expense and purchase power expense that are occasioned by  
2 the growth adjustment are incorporated into the Staff's rate  
3 calculation?

4 A. I believe that's how it works.

5 Q. Okay. What about other costs? Would you  
6 agree with me that if there were other costs associated with  
7 customer growth or with the Staff's customer growth  
8 adjustment, those costs should also be included in the  
9 company's cost of service?

10 A. I believe that it's critical that you match  
11 revenues and costs over the same -- that represent the same  
12 thing. I believe that that is an overriding principle. And  
13 I believe that whatever major elements of costs that need to  
14 be adjusted and can be appropriately reflected should be.

15 Q. Okay. Let me throw out some categories of  
16 cost that might be affected by customer growth and get your  
17 impression as to whether they should be adjusted. One that  
18 struck me was postage and mailing costs associated with  
19 bills. If there are, you know -- if they have to send a  
20 bill to each of these customers, should that cost not also  
21 be reflected?

22 A. Oh, in an ideal world, I think that all of  
23 those things should be reflected. I think that what -- and  
24 I'm not saying that it wasn't, because I don't actually  
25 know. But I think that what the Staff does, in general,

1 is -- and perhaps companies do too -- is they try to pick  
2 out the major elements of cost and try to get them right,  
3 because of the resource limitations and the time limitations  
4 probably don't let you get everything exactly right, nor is  
5 it probably important to get everything right, but  
6 conceptually I agree. Everything should be adjusted.

7 Q. Would meter reading costs be another type of  
8 thing that in a perfect world ought to be adjusted but maybe  
9 they're diminimus in this case?

10 A. Well, meter reading is an interesting thing,  
11 because I'm under the impression that meter reading costs --  
12 the incremental meter reading cost for an additional  
13 customer is up to zero -- is zero up to a certain limit of  
14 the company's contract with Cellnet. And after that it's  
15 astronomical.

16 So if we assumed it should go up and made some  
17 simple assumption like it should go up linearly based on  
18 customers, I don't know if that would be the right  
19 assumption. But I don't have a conceptual problem with what  
20 you're saying.

21 Q. Yeah. I guess conceptually -- and I don't  
22 know what the contract with Cellnet says either, but let's  
23 say the contract with Cellnet says -- you know, charges you  
24 more for each customer on the system, I guess at least  
25 conceptually if you're adding more customers, you ought to

1 add more cost to Cellnet; is that true?

2 A. Right.

3 Q. Subject to if it's diminimus --

4 A. Right.

5 Q. -- it's not worth the effort?

6 A. Right.

7 Q. Okay. How about customer call center costs?

8 You know, would -- and I guess I'm -- well, I'm moving a

9 little further from costs that are attributed to specific

10 customers, but if there are increases in the number of

11 customers, aren't there likely to be a corresponding

12 percentage increase on pressure to the customer call center

13 and couldn't that lead to increased costs?

14 A. I don't know. I mean, that -- that's a case

15 again, of do the costs of the call center go up when the

16 number of customers go up? And really it's a question, in

17 my mind, what -- you know, are these like all variable costs

18 or are these like fixed costs and I -- I'm just not familiar

19 enough with that sort of issue to really give you a straight

20 answer.

21 Q. How about bad debt expense?

22 A. I believe the Commission just looked at that

23 particular question in the Empire case. And I think that

24 the Commission's determination, after looking at all

25 relevant factors was that --

1 Q. Wait. Let me guess.

2 A. I -- no, I think what they decided was that it  
3 shouldn't be adjusted for historic levels. But that's -- I  
4 mean, you would have to check the record on that, but that's  
5 my recollection.

6 Q. Well, isn't it possible or -- yeah, isn't it  
7 possible that, you know, bad debt expense could go up  
8 proportionately to an increase in the number of customers?

9 A. I don't know.

10 Q. Okay. But I guess backing up to the more  
11 general principle, at least generally you would agree that  
12 whatever costs there are associated with customer growth  
13 ought to be thrown into the mix as well as the revenues  
14 associated with customer growth?

15 A. I agree. Matching -- the matching principle  
16 that I described in my testimony is, to me, one of the  
17 fundamental principles of -- that I've been following all  
18 my -- my career and I believe in it.

19 Q. Okay.

20 MR. FREY: Mr. Byrne, could I interrupt  
21 perhaps now for a short break?

22 MR. BYRNE: Absolutely.

23 (A RECESS WAS TAKEN.)

24 (MR. KOVACH ENTERED THE DEPOSITION.)

25 BY MR. BYRNE:

1 Q. In connection with the growth adjustment, did  
2 the Staff also make any additions to the company's  
3 coincident monthly peak demands to reflect that growth?

4 A. No.

5 Q. Do you think they should have made additions  
6 to the company's monthly --

7 A. No.

8 Q. Why not?

9 A. Well, the only reason I could think that you  
10 might even want to look at that is if you were concerned  
11 that the company's coincident peak demands would go up  
12 because of the growth in customers. But the reason you  
13 would care about that particular thing would be because you  
14 were concerned that fuel expense had gone up and we've  
15 already accounted for fuel expense going up.

16 Q. Well, let me ask you this. Just aside from  
17 why you would be concerned about it, isn't it true that you  
18 would expect the company's coincident monthly peak demands  
19 to increase if there was growth in the customer base?

20 A. All other things being equal like diversity  
21 and stuff like that? I -- maybe.

22 Q. Even with all other things being equal, you  
23 can't give a better answer than maybe?

24 A. The problem is you're talking about  
25 coincident. And there's diversity out there. So it is not

1 going to just naturally go up in a linear fashion.

2 Q. Okay. But all other things being equal, it  
3 would go up. Right?

4 A. I just don't know.

5 MR. KOVACH: Do I need to whisper or should I  
6 ask you the question myself?

7 THE WITNESS: Why don't ask you me the  
8 question yourself.

9 MR. BYRNE: No. Just --

10 (AN OFF-THE-RECORD DISCUSSION WAS HELD BETWEEN  
11 MR. BYRNE AND MR. KOVACH.)

12 BY MR. BYRNE:

13 Q. Okay. Let me try it again. I think the  
14 question I'm supposed to ask you is how is it possible that  
15 you can add additional customers without increasing the  
16 monthly peak demands if they're heat sensitive  
17 residential -- I mean, temperature sensitive residential  
18 customers, which I assume is for the most part what we're  
19 adding in this growth adjustment? How can you add those  
20 customers without increasing the monthly peak demand?

21 A. I'm not saying that the peak demand won't  
22 increase. I'm just saying that I don't know if it will or  
23 it won't.

24 Q. Well --

25 A. To the extent that you have now qualified the

1 question having to do with a specific type of customer, that  
2 they're weather sensitive and they're residential, and given  
3 that I know that at least the summer peaks tend to  
4 correspond fairly closely to the residential peaks, I would  
5 have to say under those circumstances, probably that the  
6 system peak would increase.

7 Q. Okay. And aren't a lot of the growth figures  
8 that Doyle has provided you residential customers?

9 A. I don't have Doyle's work papers with me.  
10 When you're talking about customer numbers, what -- I'm not  
11 sure -- when I look at the adjust-- the growth adjustments  
12 to sales that are shown in my Schedule 1-1, what I see is I  
13 see that the growth in sales is one of the -- that there are  
14 substantial growth in sales in residential. And those sales  
15 represent 102 out of 342 million kilowatt hours.

16 Q. Okay. And --

17 A. There probably is on -- on an actual basis,  
18 there's probably way more growth in residential customers if  
19 you're just looking at customer accounts than anybody else,  
20 but it's being offset by the fact that -- that each  
21 additional customer is adding a small amount vis-a-vis other  
22 types of customers.

23 Q. Okay. And to the extent that the growth is  
24 residential customers, doesn't that indicate that the  
25 monthly peak demand would increase?

1           A.       I would say that it -- it indicates to me that  
2       a growth in residential customers, that we've assumed that  
3       the growth in customers are like the additional customers --  
4       or like the existing customers. And the existing customers  
5       tend to have an extremely high conse-- concentration of air  
6       conditioning saturation that in the summer I'm sure that it  
7       goes up. It's not clear to me in the winter if that's true  
8       or not.

9           Q.       Okay. How about small general service and  
10      large general service customers that -- well, presumably  
11      some of them have air conditioning loads. Is that a fair  
12      assumption?

13          A.       Yes. However, I think if you look at the load  
14      shapes of these two general service classes, what you will  
15      see is that they're not as weather sensitive as residential.

16          Q.       Let me ask you this. And maybe it's just  
17      because I don't understand this as well, but to the extent  
18      you had any customer of any kind and he takes any service on  
19      that -- on that peak day, isn't he contributing to the peak  
20      demand for the month?

21          A.       Yes.

22          Q.       Okay. So --

23          A.       Okay. Let me reframe the answer. Okay. To  
24      the extent that you have growth in the number of customers,  
25      growth in sales, you probably have some corresponding growth

1 in demand. However, it's not going to be a nice linear  
2 relationship that you could say that if you add X customers  
3 or X percent of addition to customers, that your demand is  
4 going to -- your coincident peaks or however you're  
5 measuring your peaks are not necessarily going to go up by  
6 X percent. But, in general, if one's going up, the other  
7 will go up.

8 Q. Okay. Thanks.

9 A. Is that what you wanted?

10 Q. That's what I was inartfully trying to get you  
11 to say, but -- and I think you were willing to say it, I  
12 just couldn't ask the question in the right manner.

13 Well, let me ask you then, if you did make an  
14 adjustment to the monthly peak demand due to customer  
15 growth, would it also not be appropriate to adjust the  
16 Missouri allocation factor, which based on my limited  
17 understanding, is affected by the monthly peak demand?

18 A. I'm not familiar with the testimony of  
19 Mr. Bax. I would -- I guess my answer would be that if he  
20 is using normalized loads to do his allocation factor, then  
21 it's been accounted for; if he's not, then it probably  
22 hasn't. Unless -- unless it just happens that the growth in  
23 the other jurisdictions are the same percentage as in  
24 Missouri. Then you'd get the same answer. But I -- I  
25 frankly don't know if he's used normalized peaks or not.

1 Q. Okay. Let's assume for a minute he's using  
2 actual monthly peak demands. If that assumption is true,  
3 wouldn't it be appropriate for him to incorporate an  
4 increase -- and I understand that's not a linear  
5 relationship -- but an increase related to the growth  
6 adjustment?

7 A. Well, I think it would be appropriate for him  
8 to do that. Plus, I think it would be appropriate for him  
9 to account for the fact that the normalization due to  
10 weather was negative.

11 So I would say that he's got two things he  
12 should have adjusted for and they're going in different  
13 directions in terms of the normalization due to weather is a  
14 negative one, the adjustment that should be done for growth  
15 is a positive one. And I can't tell you what that would  
16 have done to the overall number.

17 Q. Okay. And you don't know whether he did  
18 either of those things?

19 A. No. I don't know.

20 Q. Okay. Okay. On another topic, thankfully --

21 A. Why don't we ask questions about what I did  
22 here, folks?

23 Q. Okay.

24 A. Oh, I'm not supposed to say that.

25 Q. I'll do that.

1 A. Okay.

2 Q. On page 7 of your testimony you refer to  
3 riders L and M, I believe.

4 A. Yes.

5 Q. Which replace the 10 M rate schedule; is that  
6 correct?

7 A. That's correct.

8 Q. And then you also refer to offset payments  
9 made to rider L and M customers --

10 A. I believe --

11 Q. -- at another point in your testimony?

12 A. I believe that what I said was that rider L  
13 and rider M replace 10 M and that the assumption that is  
14 imbedded in this case is that the -- that roughly \$2 million  
15 that the company spent for 10 M is roughly going to be the  
16 same amount of money they're going to spend now that they  
17 have rider L and rider M.

18 Q. Okay. And what's the basis for the assumption  
19 that the payments to rider L and rider M are \$2 million?

20 A. Well, I think the \$2 million is what we knew  
21 in the rate design case, EO-96-15, was the money that the  
22 company was paying on the 10 M rate schedule, was paying to  
23 those customers. We had absolutely no idea what rider L and  
24 rider M would cost the company.

25 Then I still have absolutely no idea, so the

1 assumption I -- that was made in that case and which has  
2 been carried over to this case is it's going to be about the  
3 same. I don't know that that's true, but I have absolutely  
4 no information on what it would be. So I just carried over  
5 the assumption we had made before.

6 Q. Okay. Again, referring to your testimony --

7 A. Thank you.

8 Q. -- on pages 26 and 27, you talk about -- and I  
9 believe this is in the rate design section of your  
10 testimony. You talk about the impact of the rate design on  
11 the typical customer.

12 A. Yes.

13 Q. What are the characteristics of the typical  
14 customer, as you're using it in that context?

15 A. The -- the way I calculated the typical  
16 customer was -- well, actually -- well, back up. The  
17 typical customer that I'm using here represents monthly  
18 normalized kilowatt hour usage per customer that came from  
19 Miss Mantle's weather normalization.

20 Q. Okay.

21 A. So I can't tell you what that represents in  
22 terms of, you know, like what kind of a house or any of that  
23 sort of stuff. All I'm doing is saying that the typical guy  
24 has the normalized usage that came out of the weather  
25 normalization for each of the -- for the 12 months. And

1 that all I did was then use that typical customer in my  
2 comparisons.

3 Q. Okay. And you're comparing customer -- or  
4 average monthly bills across different electric utilities on  
5 page 26; is that right?

6 A. Yes. What I did is -- to get an accurate  
7 comparison is I said what would UE's typical customer, based  
8 on Miss Mantle's normalized usage per customer for each  
9 month, what would that typical customer pay if that customer  
10 was billed on the other electric utility's rates. And what  
11 that means is you can get an accurate representation of the  
12 differences and all of the differences that will be shown  
13 are due to differences in rates.

14 Q. But aren't there differences in the  
15 characteristics -- well, aren't there, I guess, inherent  
16 differences between the utilities that would make each  
17 utility's typical customer have different bills like --

18 A. Oh, indeed. In fact, if you will see things  
19 put out by the Staff comparing, you will see them -- you  
20 will see a different kind of analysis than I've done here.

21 What I've tried to do here is to -- so you can  
22 look to see the effect of the rates, I've said what if UE's  
23 typical customer was -- was billed on these different rates,  
24 so then I've -- then when you compare them, you -- you  
25 really are just comparing the differences due to rates

1 rather than the differences due to the other  
2 characteristics. And I agree with you. UE's customers have  
3 different characteristics in terms of their summer usage  
4 versus their winter usage, for example,

5 Q. And if you had -- I mean, following up on that  
6 point, if you had climate differences between the service  
7 areas of the utility, if it's a little colder on the western  
8 side of the state or the north of the state, that would make  
9 a difference in the typical customer's bill, wouldn't it?

10 A. Oh, certainly. But -- but understand there is  
11 no typical customer. And this is simply to give kind of  
12 a -- what I call a simple-minded view of how to compare  
13 differences. This is the kind of information I would  
14 provide for our press release, for example. This -- if you  
15 are going to ask me how will this rate design impact  
16 somebody, that means a whole lot of things to me that are  
17 not conveyed in this particular analysis.

18 Q. Okay. And would it also be true -- not to  
19 beat this to death -- but a utility with a large urban  
20 customer base would have different characteristics than one  
21 that serves primarily a rural customer base?

22 A. Yes. In terms of the usage per customer.  
23 And, in fact, I just finished a case for the Empire District  
24 Electric Company. And the thing that was very unusual in  
25 that is that their typical residential customer is as big in

1 the winter in terms of usage as it is in the summer, which  
2 mirrors the fact that that is a utility that has a very  
3 large winter peak relative to a summer peak. That is not  
4 typical for UE, because -- and for obvious reasons. You  
5 have a gas company in St. Louis and you don't have a gas  
6 company in Joplin.

7 Q. I thought MGE was in Joplin?

8 A. Are they? I don't know.

9 Q. Okay.

10 A. Anyway, I'm sorry.

11 Q. Well, and the same thing -- would it also be  
12 true that the differences in the overall size of the  
13 customer base would be a relevant difference between  
14 utilities?

15 A. Certainly.

16 Q. And the different -- you know, if you're  
17 looking at electric utilities, different kinds of generation  
18 would be a relevant difference. UE has a nuclear unit. If  
19 you're comparing it to a utility without a nuclear unit,  
20 that's a difference?

21 A. If you're talking about what sort of things  
22 would cause rates to be different, yes.

23 Q. Okay.

24 A. Obviously generation mix is a big component of  
25 that.

1 Q. And I guess there's any other number of other  
2 factors?

3 A. There's all kinds of factors.

4 Q. Okay. And I guess one more factor, before I  
5 leave this, is also the mix of residential and commercial  
6 and industrial customers would be a relevant difference  
7 among utilities. Is that fair to say?

8 A. Oh, yes. And UE has a much larger proportion  
9 of very large customers in both an absolute number and in  
10 proportion.

11 Q. Okay. On page 27 of your testimony, I guess  
12 beginning on line 4, you refer to some cents per kilowatt  
13 hour number that you got out of the FERC Form 1; is that  
14 correct?

15 A. Yes.

16 Q. And are you aware that -- well, okay. Did you  
17 use FERC Form 1 as the source for your cents per kilowatt  
18 hour for I think it's commercial and industrial customers;  
19 is that right?

20 A. I believe that it doesn't come directly out of  
21 the FERC Form 1, but -- because the FERC Form 1, I believe,  
22 represents total company. However, what the Staff gets is  
23 the Missouri jurisdictional piece of essentially the FERC  
24 Form 1.

25 Q. Okay. Are you aware whether FERC Form 1

1 includes gross receipts taxes in that number?

2 A. No.

3 Q. Does that mean you're not aware or --

4 A. I'm not aware.

5 Q. Okay. So for all you know it does include

6 gross receipts taxes?

7 A. For all I know, it does.

8 Q. Okay.

9 A. I don't know if it does or doesn't.

10 Q. Okay. For purposes of your testimony here,

11 would you have used the number if it had included gross

12 receipts taxes?

13 A. If it was the only number available, I may

14 have used it. But I think I probably would have made a

15 caveat that -- in its use to indicate that this is yet

16 another reason why this is kind of a simple-minded exercise.

17 Q. And what's the problem if it includes gross

18 receipts taxes?

19 A. The problem with gross receipts taxes is those

20 are -- basically differ from one taxing area to another.

21 And urban areas, in general, tend to have higher gross

22 receipts taxes, I believe, than other areas. Industrial

23 customers tend to be subject to higher gross receipts taxes

24 than residential, so yeah. It can really distort

25 relationships.

1 Q. Okay. So if you're using this number to  
2 compare across utilities, that's what's bad about having  
3 gross receipts taxes in it?

4 A. If indeed it's in the UE number and it's in  
5 the other companies' numbers. See, the -- you have asked me  
6 do I know that it has gross receipts taxes. I don't know if  
7 UE's number does, but I don't know if anybody else's number  
8 does either.

9 Q. But if --

10 A. So what I'm saying is if you have that some of  
11 them have it and some of them don't, then it's even more  
12 distorting.

13 Q. And even if they all have gross receipt taxes,  
14 it distorts it because the taxing districts have different  
15 rates?

16 A. Right. But remember the intent of this is  
17 simply to give some general feel to decision makers. It's  
18 not to say this is the number, but they need to have a feel  
19 for, you know, these sort of big overall relationships.

20 Q. Sure. Well, let me ask you this. Where did  
21 you get the number if it didn't -- you said it didn't come  
22 directly from FERC Form 1, but you think it's a Missouri  
23 piece of the FERC Form 1 number. Where did you get it, if  
24 you remember?

25 A. The energy department has an individual named

1 Mack McDuffey. And one of Mack's jobs is to keep  
2 essentially this kind of information from FERC Form 1 for  
3 all of the Missouri utilities. To the extent that the  
4 companies file something that's not Missouri jurisdiction,  
5 it's Mack's job to rustle up that data and put it in the  
6 database.

7 Q. Do you know how he calculated it? Do you know  
8 how he took it -- and as I understand it, AmerenUE's FERC  
9 Form 1 number would be combined, Missouri and Illinois  
10 operations or system-wide operations. Do you know how he  
11 got that system-wide number down to Missouri jurisdictional,  
12 what --

13 A. I believe that the company provided it to him.  
14 And then what -- what he -- what he presents is -- in his  
15 database is sales, revenue, customer counts. I did the  
16 actual computation. And I also think they're by --  
17 commercial separate from industrial separate from  
18 residential separate from -- I'm not sure, but he does not  
19 calculate the Missouri piece, he does not use an allocation  
20 factor. He simply requests that data from Union Electric  
21 and Union Electric will supply that.

22 Q. Okay. And what is the source of your similar  
23 information for residential customers? I guess that's a  
24 different source; is that correct?

25 A. Well, residential customers I'm actually using

1       tariffed rates for all the different utilities. I've  
2       designed a typical customer, I price them out --

3               Q.       Okay.

4               A.       -- on the various rates so I don't have to  
5       deal with that problem of what does this number represent.  
6       I know what it represents.

7               Q.       So you take Miss Mantle's -- the number that  
8       you get from Miss Mantle for the typical customer and then  
9       just price it out based on the rates?

10              A.       That's right.

11              Q.       Okay. And could you have done something  
12       similar with commercial and industrial?

13              A.       I would like to come up with something more  
14       meaningful. It -- the difficulty is I don't know how to  
15       define a typical commercial or a typical industrial  
16       customer, but --

17              Q.       Because their usage varies so --

18              A.       Well, I have seen different analyses where you  
19       set up -- a typical guy has 500 kw and X load factor.  
20       That's another way to go, but again, how do I make that  
21       typical for a utility? So the answer is I don't have a  
22       typical for them. I think using a typical is probably a  
23       better way to go, but I have never discovered how to do that  
24       and make it relevant.

25              Q.       Okay. It's my understanding from your

1 testimony that you had some problems coping with data or  
2 lack thereof from AmerenUE. And I guess the question I have  
3 about that issue is if -- and my understanding is you  
4 developed sort of a template Schedule 4 attached to your  
5 testimony of the kind of Missouri jurisdictional information  
6 that you want and need. Is that fair to say?

7 A. Yes.

8 Q. If we do that, if we create a schedule like  
9 Schedule 4 and provide it to you, have it available to you  
10 under the terms that you've asked for, do you believe that  
11 will solve the problems you've identified?

12 A. That will solve one problem that I've  
13 identified. It will solve the problem of knowing how the  
14 company goes -- the company's process from billing a  
15 customer progresses up through the process that ends up with  
16 the company's financial records on -- regarding revenues and  
17 sales. And that's one problem I've identified is I don't  
18 know -- I don't know the steps in that process to the extent  
19 that I can follow it through.

20 But another -- the other problems that I've  
21 identified, the major one is -- it will not solve that  
22 problem and that's the problem that customers who are billed  
23 in a specific month based on that revenue month's rates are  
24 not necessarily recorded in that revenue month's reporting.

25 And this problem is a serious problem for me

1 dealing with rate design, because what that means is I may  
2 have data that responds -- that is -- that corresponds to a  
3 revenue month where the company supposedly bills all  
4 customers on summer rates. And I will have data included in  
5 there for customers who were billed on winter rates. And  
6 this problem gives me a great deal of heartburn as an  
7 analyst.

8 What I think to be the case, however, is I do  
9 think that the company is billing the customers on the  
10 correct seasonal rate. I just don't think that they're  
11 recording them properly.

12 Q. Okay. So that's a second problem?

13 A. Uh-huh.

14 Q. Okay. So let me just to try to get whatever  
15 there is on the table. If we were to do the report in the  
16 form of Schedule 4, that would solve one set of problems?

17 A. Uh-huh.

18 Q. But then there's this problem you just  
19 identified?

20 A. Uh-huh.

21 Q. Is that the universe of the problems with the  
22 billing data?

23 A. Solving those two problems would allow -- and  
24 the associated after-effects which would be, you know, like  
25 re-running the reports that now have those problems built

1 into them -- like, I was thinking, for example, UE does have  
2 reports that come out monthly on billing units. They look  
3 very nice. I compliment the company on making them look  
4 very nice. However, right now since -- since they have this  
5 really big problem in it, I can't see if they have other  
6 little problems in them.

7 Q. Okay. But I'm just asking --

8 A. If --

9 Q. -- to the extent you've identified problems at  
10 this point --

11 A. Right.

12 Q. -- it would --

13 A. Right. The other thing that I think would be  
14 more -- that I've kind of identified as a problem is -- that  
15 may or may not be taken care of by this is I believe that  
16 there potentially is a problem in the data that is being  
17 supplied to the corporate planning department for the  
18 purposes of calculating unbilled revenue or unbilled sales.

19 And I -- particularly when it comes to the  
20 categories relating to lighting. And I think that needs to  
21 be looked at, because to the extent that they are  
22 calculating something that goes in the company's financial  
23 records and to the extent that I think -- I don't know, but  
24 I think they're getting bum data from the billing system, I  
25 think that's a problem that needs to be seriously looked at

1 and determined whether or not it is, because that directly  
2 impacts the company's financial records.

3 Q. Okay. So that's a third category. Dare I  
4 ask, is that the universe of problems that you've identified  
5 at least at this point?

6 A. I think that's good enough for starters.

7 Q. Okay. Thanks. I was hoping you were going to  
8 say that after I asked about complying with Schedule 4, but  
9 better late than never.

10 You may have answered this before, but who  
11 reviewed drafts of your testimony before you filed? Is that  
12 like Dr. Proctor and I assume some staff lawyers?

13 A. I would refer you to Staff's responses to UE's  
14 first set of interrogatories. The question -- the relevant  
15 question is No. 34. And my response is that for the issues  
16 of sales and revenue my testimony was -- was reviewed by  
17 Warren Wood, Doyle Gibbs, Lena Mantle, and Denny Frey. And  
18 on the issue of rate design, it was reviewed by Warren Wood,  
19 James Watkins, Lena Mantle and Keith Krueger.

20 Q. And I guess excluding communications with your  
21 lawyer, which are probably privileged, did any of those  
22 people suggest significant substantive changes to your  
23 testimony?

24 A. Mr. Watkins in his -- is always my editor and  
25 he's a very good editor, but by the time my testimony is

1 written, we pretty much know what it is we want to say and  
2 he helps me make things more understandable.

3 Q. Okay. And I guess the way you pretty much  
4 know what you're going to say is you're meeting with him as  
5 you develop your analysis. Is that fair to say?

6 A. I -- I would describe it as collaborative.

7 Q. Okay. And was there ever a point in the  
8 course of developing your analysis or your testimony where  
9 somebody asked you to change the direction of where you were  
10 going in some significant way?

11 A. There was a discussion between Dr. Proctor,  
12 Mr. Watkins and myself about whether or not my rate design  
13 testimony was even necessary. Mr. Watkins' view was that  
14 his testimony on rate design, which outlines Staff's  
15 proposal, I would explain it as in words, was sufficient.  
16 Dr. Proctor expressed the opinion that that probably was  
17 right.

18 I expressed the opinion that I thought that  
19 that was inadequate. And the resolution was if you think  
20 it's necessary and you want to do it, go for it. So this  
21 was developed because I thought it was important to do.

22 Q. Okay. "This" being the rate design?

23 A. The rate design testimony that you have here.

24 Q. When did you have -- when did you have that  
25 meeting relative to when your testimony was filed, do you

1 remember?

2 A. Shortly before testimony was filed.

3 Q. Okay. And I assume by that time you had  
4 developed a lot of your analysis and maybe even your  
5 testimony on the other portion, the sales and revenues  
6 portion --

7 A. Yes.

8 Q. -- of your testimony?

9 A. And I had two attorneys assigned to me. One  
10 for sales and revenue, which was Mr. Frey, and one -- a  
11 different attorney for rate design. So the sales and  
12 revenue testimony had been -- gone to the attorney, gone to  
13 Mr. Gibbs, gone to the case coordinator, who was Miss  
14 Mantle, and all the appropriate people, you know, in what I  
15 would say was the usual timely review manner.

16 It was simply -- my rate design testimony was  
17 done fairly late in the game and that's why it's -- well,  
18 and went through a different attorney and that's why you'll  
19 see the list of who reviewed it to be somewhat different.

20 Q. Okay. Let me ask you, in general, did you  
21 have any difficulties -- and maybe it's related to this rate  
22 design testimony, but let me ask it more generally.

23 In general, did you have any difficulties  
24 meeting the time constraints of this case?

25 A. Yes.

1 Q. What were those difficulties?

2 A. Well, one was the difficulty of us not  
3 deciding definitively what the scope of the rate design  
4 testimony was going to be until very late in the game.

5 Another difficulty was in the middle of  
6 working on this case, I basically had other cases I had to  
7 work on. And I had to drop this case for a number of months  
8 before I could pick it back up again to finish the work.

9 Q. Let me try to get a feel for it, because I  
10 really -- when would you have started working on this case  
11 and then when would you have dropped it and picked it back  
12 up again if you -- just, in general, if you remember?

13 A. I -- I don't remember. The general flow of  
14 this case was that I put in my data requests, there was a  
15 long period of time before I started getting data, which is  
16 not unusual given the kind of data that I request.

17 I worked on the case for a series of months,  
18 long past the time that everybody else thought that I should  
19 have it done, dropped it when I absolutely positively had to  
20 work on something else.

21 And at that point Mr. Gibbs had been freed  
22 up -- his time had been freed up from another case and so he  
23 kind of did his thing and looked at my stuff in that couple  
24 months that I was working on something else. And then  
25 towards the very end, I did enough to finish this. I won't

1 say that I ever got freed up enough to devote a lot of time  
2 to this, but --

3 Q. What was --

4 A. -- it was stop and start.

5 Q. Okay. When you say there was a several-month  
6 period where you couldn't work on it, do you remember when  
7 that several-month period was? Was it like in the beginning  
8 of 2001 or end of 2000 or --

9 A. What I -- what I can tell you is while I don't  
10 remember when it was, I know that the Empire District  
11 Electric case was the -- the major problem that I was  
12 dealing with. And I suppose that if it's required, I can go  
13 back and look at that schedule and kind of figure out when  
14 that was. But I -- but I will tell you that in that  
15 particular case, I believe I filed something like five  
16 pieces of testimony. So the period of time when I wasn't  
17 working on the UE case was -- was lengthy.

18 Q. Yeah. And then that case ended up going to  
19 hearing, didn't it or did it?

20 A. We had two stipulations, we had a hearing, we  
21 had -- you name it, we had it in that case, we had a  
22 true-up. I mean, it was a lengthy, complicated case. And  
23 my part in that case lasted practically -- well, actually it  
24 lasted all the way through the tariff filing. So my  
25 participation, while it was stop and go, was fairly

1 extensive.

2 Q. And I guess the Empire case had to take  
3 priority because it was ahead in the schedule; is that  
4 right?

5 A. That's correct.

6 Q. And I guess when you were working on the  
7 testimony, the five pieces of testimony when you were at the  
8 hearing, when you were working on the tariff sheets, you  
9 pretty much had to exclusively devote yourself to that case?

10 A. That -- well, you never have the luxury of  
11 exclusively devoting yourself to the case. Because at the  
12 same time I believe that's when I was dealing with reviewing  
13 UtiliCorp's sample design for their load research project  
14 for Missouri Public Service. I don't know if that was at  
15 the same time that I was looking at UtiliCorp's decision not  
16 to invest in an AMR system for meter reading. There was a  
17 number of other smaller things that were going on at the  
18 same time that I was involved in.

19 Q. So you were busy is basically it?

20 A. Yeah.

21 Q. Okay. And I guess the Staff some-- you know,  
22 someone on the Staff decided that all the testimony was  
23 going to be filed on July 2nd; is that right?

24 A. Well, I -- I think that the Commission decided  
25 that when they gave the Staff authorization to file.

1 Q. Okay. But, I mean, I guess that  
2 authorization, but they didn't require them to file?

3 A. That's right. The marching orders that came  
4 down from whomever makes these decisions was we will file on  
5 July 1st -- or 2nd, I guess it was, because of the holiday.

6 Q. Yeah. And who did you hear those orders from?  
7 Would that have been Dr. Proctor probably?

8 A. Oh, probably.

9 Q. Okay.

10 A. Or probably more likely Ms. Mantle, because  
11 she's the case coordinator. In our cases, case coordinators  
12 tend to be the folks who, you know, keep the folks who are  
13 working on the case informed of what's going on.

14 Q. Might you have done additional analysis in  
15 this case if you'd had more time?

16 A. I might have done additional analysis on the  
17 UE data. Not necessarily for this case, but as I understood  
18 it, some folks in the rate engineering department were  
19 looking at the possibility of getting a different type of  
20 data to be used for regulatory purposes for analysis.

21 And I suspect that if I would have had the  
22 time, I would have spent more time trying to help them  
23 figure out what data that they really needed.

24 My recollection is that I was consulted about  
25 what data they were going to ask for. I got one -- I think

1 was diverted in my time that I -- the time I did spend on  
2 this case by trying to figure out what the heck was going  
3 on. And I also had to spend a lot of time on the phone with  
4 a member of the rate engineering part-- department who bless  
5 his -- bless his heart spent an enormous amount of time  
6 trying to track down answers for me on what data existed,  
7 where it was, how to get it, all these kind of things.

8 Because as far as I am aware, from the new  
9 system, which isn't quite so new now, this is the first time  
10 this data has been actually used for regulatory purposes.

11 Q. And would that have been Mr. Kovach?

12 A. That -- that would have been an individual  
13 named James Pozo (phonetic spelling) who works for  
14 Mr. Kovach.

15 Q. Okay. Okay. I understand all that. But let  
16 me ask the question again. And I appreciate all the reasons  
17 that you've given for the time constraints, but what I'm  
18 asking is, due to all of those factors that you've  
19 explained, was there more difficulty in meeting the filing  
20 deadline in this case, I guess? And really what I'm saying,  
21 was there significantly more difficulty meeting the filing  
22 deadline in this case than there is in a typical case in  
23 which you file testimony?

24 A. No.

25 Q. Okay. I just think I have one other couple of

1 I got two test runs of data from their new data dump. I  
2 looked at -- I think I reviewed one of those, sent back some  
3 suggestions that -- that resulted in modifications being  
4 made, but I never got around to reviewing the  
5 modification -- you know, the new data with the  
6 modifications to see if there was further things.

7 That's what I would have spent my time doing,  
8 because I would have -- because I thought that that probably  
9 had a bigger long-term benefit.

10 Q. Okay. Let me ask you this. In general, I get  
11 the impression from your answers that you were significantly  
12 more rushed or had significantly more trouble meeting the  
13 time constraints in this case than you do in a typical case.  
14 Is that fair to say?

15 A. Anymore, we're always constrained. I would  
16 say what constrained me here was the -- all the extra time  
17 that was -- that was required to figure out how to get a  
18 starting point in terms of sales and revenues for this case,  
19 because I got data sets from -- from the billing folks, I  
20 got data sets from the folks who do the forecasting, I got  
21 data sets from the rate engineering departments. I spent a  
22 bunch of time trying to compare them, figuring out do any of  
23 these numbers make sense.

24 Q. Sure.

25 A. So I probably had enough time. It simply I

1 questions, and that is did -- and I guess I would exclude  
2 lawyers from this, because I think your conversations with  
3 lawyers are privileged. But did you talk to anybody in  
4 advance of this deposition about the deposition?

5 A. Yes. Yesterday evening I went to what was  
6 called deposition preparation. And the individuals there  
7 were Steve Dottheim, Lena Mantle, Mr. Frey. And they kind  
8 of took me through some of the typical questions that would  
9 be asked and some of the -- the -- what I call the  
10 housekeeping things regarding, you know, where you have to  
11 sit, who will be there, do you have to answer the question,  
12 what the attorneys will do, stuff like that.

13 Q. And was that helpful?

14 A. Yes.

15 MR. BYRNE: Okay. I don't think I have  
16 anything more, but let me just have a second.

17 Okay. That's all the questions I have. Thank  
18 you very much, Ms. Pyatte.

19 THE COURT REPORTER: Signature?

20 MR. FREY: No. We're not waiving.

21 (PRESENTMENT WAIVED; SIGNATURE REQUESTED.)

C E R T I F I C A T E

STATE OF MISSOURI       )  
                                  ) ss.  
COUNTY OF COLE        )

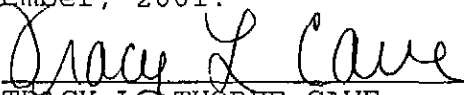

I, Tracy L. Thorpe Cave, Certified Shorthand Reporter with the firm of Associated Court Reporters, Inc., do hereby certify that pursuant to agreement there came before me,

JANICE PYATTE,

at the offices of Public Service Commission, in the City of Jefferson, County of Cole, State of Missouri, on the 28th day of November, 2001, who was first duly sworn to testify to the whole truth of her knowledge concerning the matter in controversy aforesaid; that she was examined and her examination was then and there written in machine shorthand by me and afterwards typed under my supervision, and is fully and correctly set forth in the foregoing 73 pages; and the witness and counsel waived presentment of this deposition to the witness, by me, and that the signature may be acknowledged by another notary public, and the deposition is now herewith returned.

I further certify that I am neither attorney or counsel for, nor related to, nor employed by, any of the parties to this action in which this deposition is taken; and further, that I am not a relative or employee of any attorney or counsel employed by the parties hereto, or financially interested in this action.

Given at my office in the City of Jefferson, State of Missouri, this 1st day of December, 2001.
