The rate applicable at the start of chargeable time at the calling station applies to the call during the duration of the call that is applicable to that time period. If a call begins in one discount period and ends in another, the initial period discount applied is the discount in effect at the time the call is established. The charge for each additional minute of usage is the additional minute billing rate of the rate period in which the beginning of each minute occurs.

3.3 Time of Day Rate Periods, (Cont'd.)

SECTION 3 - DESCRIPTION OF SERVICES AND RATES, (CONT'D.)**3.4 Calculation of Distance**

For services which are distance sensitive, usage charges are based on the airline distance between the serving wire center locations associated with the originating and terminating points of the call.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the serving wire centers as defined by BellCore (Bell Communications Research), in the following manner:

- Step 1:** Obtain the "V" and "H" coordinates for the serving wire center of the Customer's switch and the destination point.
- Step 2:** Obtain the difference between the "V" coordinates of each of the serving wire centers. Obtain the difference between the "H" coordinates.
- Step 3:** Square the differences obtained in Step 2.
- Step 4:** Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5:** Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6:** Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the originating and terminating serving wire centers of the call.

$$\text{Formula} = \sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
