SURREBUTTAL TESTIMONY

OF

WILBON L. COOPER

ON

BEHALF OF

UNION ELECTRIC COMPANY
d/b/a AmerenUE

St. Louis, Missouri
March 5, 2010

Co. Exhibit No. **137**
Date **3/25/10** Reporter **PP**
File No. **ER-2010-0036**

TABLE OF CONTENTS

I.	IDENTIFICATION AND INTRODUCTION.....	1
II.	PRODUCTION PLANT ALLOCATION	2
III.	RESIDENTIAL WINTER RATE DESIGN	3
IV.	SERVICE CLASSIFICATION NO. 5 (M) – COMPANY OWNED STREET LIGHTING AND SERVICE CLASSIFICATION NO. 6 (M) – CUSTOMER OWNED LIGHTING RATE DESIGN.....	4
V.	LARGE TRANSMISSION SERVICE (“NORANDA”) RATE DESIGN	6

1 **SURREBUTTAL TESTIMONY**

2 **OF**

3 **WILBON L. COOPER**

4 **CASE NO. ER-2010-0036**

5 **I. IDENTIFICATION AND INTRODUCTION**

6 **Q. Please state your name and business address.**

7 A. My name is Wilbon L. Cooper. My business address is One Ameren Plaza,
8 1901 Chouteau Avenue, St. Louis, Missouri 63103.

9 **Q. Are you the same Wilbon L. Cooper that filed direct, additional direct,**
10 **and rebuttal testimony in this proceeding?**

11 A. Yes, I am.

12 **Q. What is the purpose of your surrebuttal testimony in this proceeding?**

13 A. The purpose of my testimony is to address the rebuttal testimonies on the
14 allocation of production plant filed by Office of the Public Counsel (OPC) witness Barbara
15 A. Meisenheimer.

16 Additionally, I will provide surrebuttal comments to the Missouri Department
17 of Natural Resources witness Laura Wolfe's rebuttal testimony on the appropriate winter rate
18 design for the Residential Service Class, and The Municipal Group witness Petree A.
19 Eastman's rebuttal testimony on cost of service and rate design of the 5(M) classification for
20 street lighting. My failure to address a particular witness' position or argument should not be
21 construed as endorsement of same.

1 **II. PRODUCTION PLANT ALLOCATION**

2 **Q. On page 4 of her cost of service rebuttal testimony, Ms. Meisenheimer**
3 **states that “The use of non-coincident peaks in developing class cost allocations**
4 **disproportionately attribute costs to classes that use more in months that are not even**
5 **representative of the system peak or period of highest system costs”. Is this statement a**
6 **correct characterization of AmerenUE’s 4 Non Coincident Peak Average & Excess**
7 **Allocation (4 NCP A&E) method for allocating the cost of production plant?**

8 **A. No, it is not. While AmerenUE’s four highest system peaks in a year usually**
9 **occur during the months of June through September, a strict application of the 4 NCP A&E**
10 **methodology requires the use of each class’ four non-coincident peak demands, regardless of**
11 **when such peaks occur. For the test year in this case, 15 of the 20 maximum 4 NCP monthly**
12 **demands for the Company’s major customer classes occurred during the Company’s summer**
13 **peak demand months of June-September. The fact that the remaining 5 NCP demands**
14 **occurred during non-peak months should not render this method inappropriate for allocating**
15 **the Company’s fixed production capacity.**

16 **Q. Have you reviewed the testimony of all other parties with regard to the**
17 **allocation of fixed production plant costs?**

18 **A. Yes, I have. AmerenUE, and the MIEC have provided testimony in support of**
19 **the use of the 4 NCP A&E allocation method for fixed production plant cost allocation, while**
20 **the remaining parties have sponsored other methods which I have previously rebutted. As**
21 **stated in my rebuttal testimony, the Company’s net investment in fixed production assets**
22 **represents approximately 68% of the net original cost rate base and variations among the**

1 parties in allocation of this investment has produced significant differences in class cost of
2 service requirements in this case.

3 Arguably, every allocation method for fixed production plant costs sponsored
4 by parties in this docket has merit, and the Company is not suggesting that there is a single
5 methodology for the allocation of production plant. However, the Company's proposed
6 4 NCP A&E method is superior to other proposals offered by certain parties in this case due
7 to its more balanced consideration of both the energy and excess demands requirements for
8 serving each customer class. For these reasons and those stated in my rebuttal testimony, the
9 Company recommends that the Commission adopt the 4 NCP A&E method for the allocation
10 of production plant costs.

11 **III. RESIDENTIAL WINTER RATE DESIGN**

12 **Q. In the rebuttal testimony of Ms. Laura Wolfe it is recommended that**
13 **"AmerenUE conduct a study addressing the elimination of declining block rates in its**
14 **residential class in a revenue-neutral manner, and file the results of this study in its next**
15 **general rate case." Please comment.**

16 **A.** The Company commits to conduct such a study and to file the results in its
17 next rate case. However, as stated in my rebuttal testimony, the retention of this declining
18 block rate is warranted for three reasons: 1) to more fully utilize available existing production
19 and transmission capacity installed to meet the higher summer demands for electricity, 2) to
20 reflect the fact that additional winter demand can be served by the Company at a variable
21 cost lower than its average running costs of generation, and 3) the material bill impact of the
22 elimination of same on the Company's much above-average winter's energy use residential
23 customers.

1 **IV. SERVICE CLASSIFICATION NO. 5 (M) – COMPANY OWNED**
2 **STREET LIGHTING AND SERVICE CLASSIFICATION NO. 6 (M) – CUSTOMER**
3 **OWNED LIGHTING RATE DESIGN**

4 **Q. On pages 15 and 16 of her rebuttal testimony, Ms. Eastman lists six items**
5 **of “relief” requested by the Municipal Group. Please comment.**

6 A. The Company agrees with relief Items 2, 5, and 6. However, with regard to
7 Item 1, wherein it states “No rate increase for street lighting under 5M and 6M ...”, and
8 Item 3, wherein it states, “The 10% discount currently offered on all street lighting bills to
9 municipalities will be increased to 20%...”, the Company objects to both. As discussed in my
10 direct testimony, the Company is proposing an across-the-board increase for all of its
11 customer classes that is fairly consistent with the rates approved by the Commission in the
12 Company’s last rate case and fairly consistent with the rate increase proposals sponsored by
13 the MPSC Staff and OPC in this case. While Ms. Eastman correctly points out that the
14 Company did not provide a lighting cost study in the case, she does not present any
15 compelling evidence to vary from the across-the-board allocation of the increase granted in
16 the case. Clearly, either a rate freeze or an increase of the discount from 10% to 20% would
17 be inconsistent with an across-the-board increase and would result in other customers
18 receiving an increase greater than the overall average increase. Additionally, nothing in
19 Ms. Eastman’s testimony suggests a material change in the Company’s cost structure since
20 the last rate case or a change in the lighting service being provided by the Company;
21 therefore, Ms. Eastman’s recommendations should be rejected. Lastly, the Company’s
22 acceptance of Ms. Eastman’s relief recommendation Item 2 which requires the completion of
23 a lighting study, will shed light, so to speak, on the specific costs of providing street lighting

1 service and be beneficial in establishing rates for the lighting classes in the Company's next
2 rate case.

3 Item 4 states "AmerenUE will permanently remove and cease pole rental
4 charges to municipalities for poles that pre-date 1988 under the 5M classification." The
5 Company objects to this recommendation for several reasons. Ms. Eastman states that
6 "monies paid over this lengthy period of time for pole rental should have long since paid for
7 the cost of those poles that pre-date 1988." First, the Company utilizes mass property
8 accounting for its investment in lighting facilities and, as a consequence, does not track
9 depreciation by a specific item of street lighting property. Therefore, it would be impossible
10 to determine whether a given pole has been completely depreciated. Additionally, the
11 Company's street lighting pole installation records do not contain data on the vintage of
12 every street lighting pole.

13 More compelling is the buy vs. rent arrangement for real property.
14 Ms. Eastman's logic would seem to suggest that a landlord who had a thirty year mortgage
15 and the same rent -paying tenant over this time frame, would consider it fair to deed the
16 dwelling to said tenant, as he/she has provided rent over the thirty year period that afforded
17 the landlord the ability to pay off the mortgage. Clearly, such is not the case. Property
18 owners are most likely to sell real property at fair market value, regardless of whether it is
19 paid for or who paid for it. Ms. Eastman's proposal does not reflect real property markets
20 and should be rejected. Additionally, her proposal would result in increased rates to the
21 Company's other customers.

1 **V. LARGE TRANSMISSION SERVICE ("NORANDA") RATE DESIGN**

2 **Q. Your direct testimony recommends a take-or-pay rate design for the**
3 **Large Transmission Service Class and your rebuttal testimony offers the Commission the**
4 **alternative of an "N" factor addition to the Company's fuel adjustment clause ("FAC") in**
5 **order to address the Company's and MPSC Staff's use of billing units for Noranda at its**
6 **full historical load rather than some lower level reflecting reduced consumption as a**
7 **result of the January 2009 ice storm. Please comment.**

8 A. The Commission's adoption of either of these approaches will mitigate the
9 Company's risk of reduced Noranda load, and thus afford the Company a more reasonable
10 opportunity to earn the rate of return authorized by the Commission in this case. On the
11 other hand, if neither of these approaches is adopted, then Noranda's test year billing units
12 should be adjusted consistent with the test year update period (i.e., January 31, 2010) in this
13 case. While this billing unit update does not provide the same level of risk mitigation, it
14 better reflects current Noranda operations and makes it less likely that the Company will not
15 actually recover the Noranda revenues assumed in this case. Also it is consistent with the
16 true-up of other revenue and cost items that the Commission has approved for this case.

17 **Q. Have you developed a schedule that demonstrates the present annual**
18 **revenue impact of Noranda at the full test year load vs. load at the January 31, 2010**
19 **update period?**

20 A. Yes. Schedule WLC-SR12 shows this difference to be approximately \$21
21 million annually based on present rates. It should be noted that Noranda's actual January
22 2010 billing units were utilized to develop this analysis and the remaining months' billing

Surrebuttal Testimony of
Wilbon L. Cooper

- 1 determinants were estimated based on the proportionality of actual January 2010 billing units
2 to test year full load January billing units.

3 **Q. Does this conclude your surrebuttal testimony?**

4 **A. Yes, it does.**
