APPENDIX B

In-Service Test Criteria

Coal Plant In-Service Test Criteria

1. Unit must demonstrate that it can operate at its design minimum load or above.

Hours at or above design minimum load \$\text{\text{\text{\text{\text{\text{400}}}}} 0.80}\$
400 hours

2. Unit must be able to operate at or above its design capacity factor for a reasonable period of time. If the design capacity factor is not specified it will be assumed to be 0.60 unless the utility can offer evidence justifying a lower value.

- 3. Unit must operate at an average capacity equal to 98% of its design maximum continuous rating for four (4) hours.
- 4. Unit must be operated so as to show a clear and obvious trend toward the predominate use of coal as its primary fuel. Test period will be thirty (30) days. The following items will be used as an indication of the trend for coal operation:
 - a) Boiler control tuning completed such that the unit can operate safely with all control systems in auto.
 - b) Ash build up in the furnace and backpass areas shall be monitored and be within expected levels.
 - c) All boiler/turbine interlocks shall be proven to work as designed.
 - d) Sootblowing timing and sequences shall be set properly to clean the tube areas.

- e) All critical alarms brought into the control room shall be operational and functioning properly.
- f) At the end of the test period, oil burn levels, if applicable, will be at or near design levels while burning coal.
- g) Oil ignitors are functioning in accordance with specifications.
- 5. Unit must have successfully completed all major equipment startup test procedures.
- 6. Sufficient transmission interconnection facilities shall exist for the total plant design net electrical capacity at the time the newest unit is declared fully operational and used for service.
- 7. Sufficient transmission facilities shall exist for Empire's share of the total plant design net electrical capacity from the generating station into the Empire service territory at the time the newest unit is declared fully operational and used for service.
- 8. Equipment installed to comply with emission requirements shall be operational and demonstrate the ability to remove 93% or more of the NOX, SO₂, particulate, and mercury emissions they were installed to remove over a continuous four (4) hour period while operating at or above 95% of its design load. This equipment shall also be required to demonstrate that it is able to remove 88% or more of these same emissions it was installed to remove over a continuous 120 hour period while operating at or above 80% of its design load.

Combustion Turbine Unit (Over 95 MW) In-Service Test Criteria

1. All major construction is completed.

- 2. All pre-operational tests have been successfully completed.
- 3. Unit successfully meets all contract operational guarantees.
- 4. Unit will successfully demonstrate the ability to initiate the proper start sequence resulting in the unit operating from zero (0) rpm (or turning gear) to full load when prompted at a location (or locations) from which it will be normally operated.
- 5. If unit has fast start capability, unit will demonstrate the ability to meet fast start capability.
- 6. Unit will successfully demonstrate the ability to initiate the proper shutdown sequence from full load resulting in zero (0) rpm (or turning gear) when prompted at a location (or locations) from which it will be normally operated.
- 7. Unit will successfully demonstrate the ability to operate at minimum load for one (1) hour.
- 8. Unit will successfully demonstrate the ability to operate at or above 95% of nominal capacity for four (4) continuous hours.
- 9. Unit will successfully demonstrate the ability to produce an amount of energy (MWh) within a 72 hour period that results in a capacity factor of at least 50% during the period when calculated by the formula:

capacity factor =
$$\underline{MWh}$$
 generated in 72 hours (nominal capacity x 72 hours)

- 10. Transmission and distribution facilities will demonstrate their capability to export the entire plant net capacity.
- 11. If unit has dual fuel capability, the unit will successfully demonstrate the ability to start on the back up/secondary fuel as described in item 4.

12. If unit has dual fuel capability, the unit will successfully demonstrate the ability							
to transfer between the two fuels while on line.

Financial Ratios

Credit Ratio Ranges & Definitions - Standard & Poor's - Business Risk Level 6

Adjusted Total Debt to Total Capitalization (1)

Adjusted Funds From Operations Interest Coverage (2)

Adjusted Funds From Operations as % of Average Total Debt $^{(3)}$

BBB							
Min	Middle 1/3	Max					
48%	51% - 55%	58%					
3.0x	3.4x - 3.8x	4.2x					
18%	21% - 25%	28%					

Ratio Definitions *:

- (1) "<u>Adjusted Total Debt to Total Capitalization</u>" is calculated as Adjusted Total Debt ÷ Total Capitalization where Adjusted Total Debt and Total Capitalization are defined as below:
 - Adjusted Total Debt is calculated as:
 - Notes Payable + Current Maturities of Long-Term Debt + Current Capitalized Lease Obligations + Long-Term Debt + Capitalized Lease Obligations + Total Off-Balance Sheet Debt
 - Total Off Balance Sheet Debt includes off-balance sheet financings such as:
 - o Operating leases and purchase power debt-equivalent
 - Total Capitalization is equal to:
 - o Total Debt + Common Stock Equity
- (2) "Adjusted Funds From Operations Interest Coverage" is calculated as (Funds From Operations + Cash Interest Paid + AFUDC Debt + Interest on OBS Debt) ÷ Interest Expense where Funds From Operations and Interest Expense are defined as below:
 - Funds From Operations is calculated as:
 - Net Income + Depreciation and Amortization + Pension Expense AFUDC + Deferred taxes
 - Interest Expense is calculated as:
 - Interest Expense (net) + Allowance for Funds Used During Construction (debt) + Interest on OBS debt
- (3) "Adjusted Funds From Operations as a % of Average Total Debt" is calculated as (Funds From Operations + Depreciation Adjustment for Operating Leases) + Adjusted Average Total Debt where Funds From Operations and Adjusted Total Debt are defined as above.
 - Adjusted Total debt is the average of two years

^{*} Information based upon Standard & Poor's Ratings Services Utility Financial Ratio Definitions updated January 13, 2005.

APPENDIX D

PROCESS ILLUSTRATION

Adjustment of Amortization Amounts

Explanation of the Method Used to Determine the Adjustment to Amortization Amounts Required for Empire to Meet the Financial Ratio Targets.

Method:

For this illustration, the adjusted rate base as used in ER-2004-0570 provides the base financial information used in these calculations. Empire made adjustments to this base financial information to include certain off balance sheet items. These adjustments were to conform with rating agency methods for balance sheet re-statement. Empire identified these accounting adjustments, such as the equivalent debt treatment of operating leases and capacity contracts. The equivalent debt treatment of these off balance sheet items was determined by calculating the net present value of the future stream of lease or contract payments, discounted at 10%,. The base financial information was then adjusted by the equivalent debt balances and the interest expense associated with the equivalent debt balances. From this adjusted information, Empire then calculated the three guideline ratios defined in Appendix C for total regulated company and as allocated to the Missouri jurisdiction. If either of the two financial ratios failed to meet the required criteria below, then Empire determined the amount of additional funds from operations that would be required for Empire to meet the financial metric target.

Financial Ratio Targets for Additional Amortization Calculation:

- a. 3.2x Adjusted Funds from operations interest coverage (an operational guideline)
- b. 19.5% Adjusted Funds from operations as a percentage of average total debt (an operational guideline)

The Signatory Parties acknowledge a 56.5% Adjusted Total Debt to Total Capital objective. This objective will not be addressed through this amortization but will be satisfied through future Empire financing requests before the Commission during the term of this Agreement.

Explanation of Attachment to Appendix D:

This illustration is based on EDE financial information consisting of information filed in case ER-2004-0570 and other EDE financial documents. This illustration assumes that the Commission has found all expenditures to be prudent and reasonable and has

accepted the jurisdictional allocation factor. For this illustration, EDE statements were placed on a jurisdictional basis by applying an allocation factor to the EDE balances. The base jurisdictional information was used to calculate the three (3) financial ratios. In this illustration, the Missouri electric jurisdictional adjusted funds from operations (FFO) as a percent of average debt was found to be 17.59%, which is below the financial ratio target of 19.5%. In order for the target to be achieved, \$6,399,213 of additional FFO would be needed from Missouri. The additional FFO was then studied to determine if there would be any additional tax impacts on cash flow resulting from the additional FFO. This illustration assumes that the entire additional FFO would have negative tax cash flow impacts, thereby resulting in an additional amortization of \$3,987,265 needed in order to meet the target. The Signatory Parties have not agreed to a methodology to determine the tax impacts related to additional FFO. In this illustration, the revenue requirement amount equals the amortization amount. The overall impact on Missouri customers would be a 2.58% increase in revenue requirement. This example is an illustration only. The actual amount of amortization needed will be determined in Empire's next rate case.

Explanation of Adjustments to balance sheet for rating agency methodology:

- Operating Lease Debt Equivalent Present value of future lease payments for the operating lease for the aluminum railcars using a 10% discount rate.
- Purchase Power Debt Equivalent Present value of future capacity payments of purchased power capacity obligation using a 10% discount rate. A portion of this amount is then treated as debt-equivalent, based on the risk factor (10-20%, 30%, or 50%) assigned to each contract.

Transactions included in the amounts above are subject to review by the Commission for prudence. Amounts determined to be not prudent will not be included in the calculation of the financial ratios for purposes of adjusting the amortization amount. The prudence and reasonableness of these transactions will be determined in Empire's next general rate case.

The illustration does not include the effect of SO_2 sales on cash flow because currently these sales have not occurred. To the extent actual SO_2 sales occur, these sales will be included as cash flow for purposes of Appendix D and whether the resulting projected cash flow meets the targets.

Calculation of amortization to meet Financial Ratio Targets: Attachment to Appendix D

Appendix E

Class Cost of Service Data Requirements

The Empire District Electric Company shall provide the data listed below for a 12-month historical time period defined as the Study Period for the Class Cost of Service Study (study period). The study period may differ from the 12-month historical time period (test year) used in the Rate Case to allow for data collection and processing time. The study period may be up to twelve months prior to the test year. Budgeted data will not be acceptable for the purposes of satisfying the data requirements outlined in this document.

- 1. Annual costs and revenues by FERC account (including all plant accounts, depreciation expense, depreciation reserve, and all expenses)
- 2. Hourly load data by rate class
- 3. Hourly system load data
- 4. Monthly load characteristics (by rate class and by voltage category)
 Data to be provided in three versions:
 - a. monthly actuals
 - b. monthly weather-normalized
 - c. monthly weather-normalized with losses

The information to be provided for each version includes:

- (i) coincident peak demands
- (ii) class peak (non-coincident) demands
- (iii) customer maximum (customer non-coincident) demands
- 5. Monthly kWh sales, rate revenues and billing units (by rate schedule, by voltage category, and by billing month)

Data to be provided in two versions:

- a. monthly actuals
- b. monthly weather-normalized
- 6. Special cost studies to be provided:
 - a. Primary/secondary split of distribution investment in FERC Accounts 364-367
 - b. Customer/demand split of distribution investment in FERC Accounts 364-368
 - c. Meter cost study
 - d. Service drop cost study
 - e. Meter reading cost study
 - f. Loss study plus the loss factors to apply to adjust demand and energy units from one voltage level to another
 - g. Excess facilities by customer and by FERC Account
- 7. Monthly billing data for each Large Power and Special Contract account will be provided.
- 8. Work papers showing input data and computations will be made available to all parties to this agreement for the above items. These work papers should be available in electronic format, with all formulas intact, to the extent possible.

Appendix G

Missouri Department of Natural Resources' Proposed Targets for Energy Efficiency Programs

In order to achieve energy efficiency that will reduce supply-side costs and provide a hedge against volatile natural gas prices and uncertain future emission regulation, the Missouri Department of Natural Resources (MDNR) proposes that The Empire District Electric Company (EDE) and the Customer Programs Collaborative (CPC) use their best efforts to achieve the following targets from the implementation of cost effective energy efficiency programs.

These targets are for energy efficiency programs and do not include demand response programs (such as curtailment and peak shaving) and energy affordability programs.

- I. Annual investments in energy efficiency programs of one percent of Empire's 2003 Missouri jurisdictional revenues = \$2,400,000 each year
- II. EDE expects growth in consumption of 445,737 MWh from 2005-2009.
 Target: Savings by 2009 of 45,825 MWh, representing approximately 10% of growth in consumption over this period
- III. Similarly, EDE expects net peak demand to grow by 100 MW from 2005-2009. Target: Avoided capacity of 10 MW during this period (2.5 MW per year)

The appropriate mix of energy efficiency programs across market sectors and geography, as well as appropriate program design, will reveal itself during the program planning process and during program implementation as the CPC focuses on pursuing the most cost-effective mix of energy efficiency programs.

	Projected Annual	
	Net Peaks MW *	
2005	1,070	
2006	1,094	2.24%
2007	1,119	2.29%
2008	1,144	2.23%
2009	1,170	2.27%
	Projected Annual	
	NSI	
	Energy MWh *	
2005	5,166,647	
2006	5,275,265	2.10%
2007	5,385,738	2.09%
2008	5,498,104	2.09%
2009	5,612,384	2.08%
2007	2,012,207	2.00/0
