

Amy Caudill, SAINT CHARLES, MO.

Please extend the STL pipeline certificate prior to run out in 2021. It has been communicated that the FERC is planning on a short term extension through the winter months while determining the impact of shutting down the pipeline in the near future. The impact of not enabling long term use of the pipeline would create an economic collapse on an already stressed economy. Both democratic and republican State officials as well as State businesses and now local Missouri citizens (myself) are communicating we support the STL pipeline and do not support its closure. I do not support its closure in the next few months or years. There is no suitable alternative in place and no evidence the pipeline is significantly more harmful than alternative means. What IS apparent is the economic harm to both businesses and individual citizens if the pipeline is closed.
