

Exhibit E

Evergy IRP Petition Letter Spring 2021

Mr. David Campbell
President and Chief Executive Officer
Evergy, Inc.
One Kansas City Place
1200 Main Street
Kansas City, MO 64150

Dear Mr. Campbell

I urge Evergy to commit to phasing out its coal-burning power plants by 2030 in the Integrated Resource Plan (IRP) and Sustainability Transformation Plan (STP), replacing them with clean energy including wind, solar, efficiency and storage. Evergy should not invest in new gas generation, which creates significant climate impacts from fracking, pipeline leaks, and carbon emissions.

Evergy should center its IRP and STP on principles of energy justice and energy freedom. Energy justice prioritizes clean energy access for all and eliminates public health impacts and costs, especially to at-risk populations. A transition to clean energy should also prioritize job creation in vulnerable communities from efficiency, renewable energy, and storage investments in Missouri and Kansas freeing us from dependence on out-of-state coal companies.

Policy tools like securitization that allow utilities to refinance coal-plant debt and reinvest in clean energy while passing savings on to customers will be critical to Evergy's coal-to-clean transition. Evergy should reach consensus with stakeholders on securitization and work for its passage in the Missouri and Kansas legislatures this year.

This transition will reduce public health impacts while benefiting customers. A 2016 Clean Air Task Force analysis found that Evergy's coal-burning plants in Kansas and Missouri are responsible for nearly 30 premature deaths and more than 180 asthma attacks every year. A 2019 study by the University of Washington and Stanford University found that, nationwide, Black and low-income people face the highest risks for death from power plants' fine particle pollution. The COVID pandemic has exacerbated health impacts from coal plant pollution. A 2020 study by Harvard University concluded that COVID death rates increase by 15% from exposure to even slightly elevated levels of fine particle pollution, of which coal plants are a major source.

A 2019 Sierra Club analysis found that Evergy's Kansas coal-burning plants lost \$267 million over four years compared to market energy prices. And projections for two of Evergy's coal-burning plants show them losing \$847 million over the next 20 years.

Cost savings from the clean energy transition should be passed on to customers, especially those customers most at-risk. Evergy should increase investments in programs aimed at

reducing the energy burden carried by low-income customers. Evergy should improve linkages between bill payment assistance and low-income energy efficiency and weatherization programs to reduce energy burden over the long-term.

As we recently learned in extreme weather, Evergy must improve early, reliable phone, text, email, and emergency system notifications for all service interruptions including disconnections, which can be serious and life-threatening. In all communication with customers in need of bill payment assistance and facing disconnections, Evergy should link those customers with low-income energy efficiency and weatherization programs to reduce energy burden over the long-term. Evergy should also refer those customers to food, health and housing assistance programs offered by local social service organizations.

Evergy should also improve transparency in its IRP and STP processes. Much of Evergy's underlying analyses have been kept confidential. Given the importance of these plans for the energy future for much of Missouri and Kansas, openly sharing information with the public and inviting feedback is essential.

Evergy is at a critical juncture in its history. I urge Evergy to make the right choice for Missourians and Kansans and commit to phasing out coal by 2030, with no new gas generation, and phasing in clean energy to benefit the communities that Evergy serves.

Thank you,

Contact: Full Name	Address1	City	Postal Code	Personal Message
Ruth Woods	8628 Rainbow Ln 921	Kansas City	64114	We need to move forward with renewable clean energy sources. We need to move away from coal. Our future depends on what we do today.
Marilyn Belwood	Fairlawn Ave	Marshall	65340	We need clean energy. Close the coal plants.
Trisha Jachlewski	9727 N Stark Ave 1010	Kansas City	64157	This is the right thing to do.
Robert Moore	brooklyn avenue	kansas city	64127	these plants threaten my life because they make it harder for me to breathe
John Miller	804 West 48th Street	Kansas City	64112	The environment is something we all share. I don't intend to continue giving money to a corporation that will make my life harder in the long run by unduly contributing to global warming. Please help in directing consumer choices by making more clean energy available. Every decision matters as tomorrow's energy grid is built today.
Spencer Sneller	1001 W 39th St Ste 1	Kansas City	64111	This makes sense on so many levels including financial, environmental, and environmental justice. Thank you!
Reese Forbes	4225 W Pine Blvd Unit 14	Saint Louis	63108	No coal - go to solar, wind, geothermal only.

Cathy Petersen	3012 De Groff Way	Kansas City	64108	Mr. Campbell please move into the 21st-century and shut down or convert all your coal electricity generating plants. They are killing all humans slowly inch by inch.
Pamela Shaver	401 S Bryant St	Nixa	65714	Missouri customers need the opportunity to have cheap, clean energy! Please invest in our future! KCMO's Climate Action Plan needs to have this phase out Evergy's coal-burning power plants completed by 2030 in not soer
Don Wallace	510 E 56th St	Kansas City	64110	
Kyri Gorges	7408 Grand Ave	Kansas City	64114	I want smart energy options for my city. I urge you to commit to using green energy to ensure my nephews and niece and their children can have safe, less expensive energy. Climate change is real, and evidence is easily found all around us. The weather is becoming more extreme and sea levels are rising. We have a great chance now to take a longer, less narrow view of the future to protect the younger generations from unhealthy living conditions and climate emergencies that result in major impacts to their quality of life and exorbitant energy bills.
Cheryl Metzger	916 SW Sara Cir	Lees Summit	64081	I think it is of vital importance for all Kansas and Missouri residents to have clean air to breathe. We are already behind in addressing this issue and have seen the negative impacts on our health with increasing cases of asthma and other respiratory problems. I along with most residents believe we should not be burning coal for energy and should replace coal and gas with sustainable energy sources. I strongly urge Evergy to begin by making the committment and plans to phase out coal by 2030, with no new gas generation, and phasing in clean energy to benefit the all of us in the communities that Evergy serves.
Pam Seator	208 W 62nd Ter	Kansas City	64113	It's time to make substantial moves to clean energy. Not only will public health be protected but jobs will be created and we consumers of energy will save money.
Margaret G Tyler, Ph.D.	8 Cambridge Ct	Saint Louis	63122	It's past time for America to move beyond finite fossil fuels that hurt our health, our planet, and our bank accounts. We need Evergy to source it's power from clean, renewable, lower cost energy sources like wind and solar. Please be a leader for the welfare of Missouri and Kansas residents and thereby a leader for the nation as well.
Mary Kay Mcginty	5801 Kenwood Ave	Kansas City	64110	I strive to install solar panels on my future home, so that I can say with confidence that I am not polluting the planet in order to power my television and my refrigerator and my stove. I know that many other Missourians share this dream, so please help us to make this a possibility for all.
Briana Anderson	11401 E 14th Street S	Independence	64052	
Fred Zang	10800 Wornall Rd Apt 207	Kansas City	64114	I have children and grandchildren whose future depend on this.

Julia Trotter	5401 Brookside Blvd Apt 402	Kansas City	64112	I have campaigned for sustainable power sources. Please move forward with decisions that support sustainable power, for the future of our state! Coal must be eliminated! I believe in solar so much that I made the decision to install solar on my house for the planet. It doesn't yet make economic sense, but it makes moral sense. Please do what you must to save our planet from coal.
Sue Sykes Berry	4016 Holmes St 5749	Kansas City	64110	
Mary Espinoza	Kenwood Ave	Kansas City	64110	I believe a cleaner environment is healthier for the citizens in this country. I am so proud to live in a community where there was a program to put electric car charging stations around the city. We need to continue to take that level of commitment even further so we can be leaders and role models in a cleaner future for our young people and the health of this planet.
Rebecca Anderson	14470 NW 63rd St 3733 north briarcliff road	Parkville	64152	I am highly concerned about climate disruption and our children's future as well as food and national security issues caused by climate change.
Bill Griffith		kansas city	64116	
Martha Graham	1000 W 97th St	Kansas City	64114	I am concerned about the environment and sympathetic to those on limited funds due to the virus and those receiving aid. I am an Evergy customer, and I'm very concerned how you don't, care about your customers, and our environment. I'm guessing it all about \$\$ for you.
Judy Bishop	325 SW Ascot Dr	Lees Summit	64082	What about us. Hi, I'm a resident of Kansas City and an ecological engineering graduate (now a water resources engineer). The environment has always been my passion and now is the time to make changes that benefit the health and well-being of the people of Missouri. To accomplish this, we need to invest in clean energy, reducing pollution levels that threaten air quality as well as water quality. The future starts with one person making a change and inspiring others. That is what I hope to do today.
Megan Suiter	2523 Charlotte St	Kansas City	64108	Global climate change is a fact, and I'd like to part of helping rather than continuing the march. Establishing Missouri as a base for new energy efficient industries and the retraining for the jobs related would be a boon for our State's economy.
Karen Williams	12540 Walnut Ct	Kansas City	64145	From Pope Francis' Encyclical Laudato Si' On Care for our Common Home " The notion of the common good also extends to future generations. The global economic crises have made painfully obvious the detrimental effects of disregarding our common destiny, which cannot exclude those who come after us. We can no longer speak of sustainable development apart from intergenerational solidarity. Once we start to think about the kind of world we are leaving to future generations, we look at things differently; we realize that the world is a gift . . .
Martha Kauffman	20 West 9th Street	Kansas City	64105	Intergenerational solidarity is not optional, but rather a basic question of justice, since the world we have

received also belongs to those who will follow us.
 [We must acknowledge this obligation of justice:]
 'The environment is part of a logic of receptivity. It is on loan to each generation, which must then hand it on to the next.' An integral ecology is marked by this broader vision" LS-159

David Klinge	1780 Preston Centre Dr	Fenton	63026	Fossil fuels are bringing us closer to environmental disaster -- please start heading in a better direction! Everygy should support MARC's new Climate Action Plan and supply 100% carbon neutral electricity throughout the 10 county KC metropolitan area by 2035. This is the same goal as the Biden administration is implementing nationwide. Please meet the demands of the moment. Do not burn coal and claim you do it on my behalf.
Stephen Melton	9771 Promenade Drive	Parkville	64152	Continue to invest in renewable energy and storage systems to handle Kansas City's needs.
Harold Draper	600 W 114th Ter	Kansas City	64114	
Kathy Dolson	8340 Knollwood Dr	Saint Louis	63121	Coal simply has to go! Coal not only adds to our growing CO2 problem, it releases literally tons of heavy metals and sulfur based pollutants into our air, causing death and impairing child development. Is that what you WANT to be remembered for? Is that what you want for your family and friends? Let's put our hearts AND our heads together to make the future better than when we became responsible for the world. And don't "wait" -- do it NOW, please!
Arthur Mezins	16 E. Concord Ave	Kansas City	64112	Coal burning just does not make sense given overwhelming climate science and toxic by-products. Make the change.
Chris Osborne	6612 Ralston Ave	Raytown	64133	Clean energy is a necessity for all. Everygy cannot continue to place ever higher energy burdens on it's most vulnerable customers while those customers suffer ill health effects from dirty energy generation. When my family lost power for over 48 hours after the snow and ice storm in Jan. 2019, we needed to replace nearly all our perishable food. We opted to leave our powerless home and paid for a hotel room as my 7 year old son was ill at the time. This left us in an economic crisis, and it took me nearly a year to pay off the credit card debt we took on as a result. And we were not alone. Even now, with customers facing higher energy costs as a result of the recent plunge in temperatures, Everygy is once again requiring already highly energy burdened customers to foot the bill. This simply isn't sustainable, much less humane.
Kathy Downing	311 E 80th St	Kansas City	64114	

Denise Motta	8038 Mackenzie Rd	Saint Louis	63123	Clean Energy is, and must be, the future!!!
James R Turner	301 W 110th St	Kansas City	64114	
Don Wallace	510 E. 56th St.	Kansas City	64110	Clean air All efforts in this region to address effectively the challenges of the climate crisis center on a source of clean electricity. Every must be a responsible partner in this effort. According to a 2019 Sierra Club analysis, Evergy's Kansas coal-burning plants lost \$267 million over four years compared to market energy prices, and projections for just two of those coal-burning plants show them losing \$847 million over the next 20 years. With your support, we can phase out dangerous and expensive coal pollution AND lower prices for struggling Kansas residents.
